

Folks at Mosley,

I have had a PRO 67-B up 48 feet since January this year. I do a lot of QRP work at 5 watts. I'm very pleased with its performance. It tunes great not only on 40, 20, 17, 15, 12 and 10 meter bands, but is effective on 30 and 6 meters, tuning to 1:1 SWR with my Yaesu FT-2000's autotuner.

Today, I had a fine 10 minute QSO on 20 m. CW with DK9OY who was running 3 watts to a Mosley TA-33. I was running 5 watts to the PRO 67-B. We enjoyed a solid QSO both ways. The proof is in the RESULTS. I am kicking butt in CW contests at 5 watts output. The awards on the wall are proof positive of a well designed antenna.

This photo was taken on raising day, Jan. 6, 2012.

Keep up the good work!
