INTRODUCTION

The Global Insight's INTLINE (International Online) Database is the premier source of **timely** key economic indicators for the major economies in the world today. Macroeconomic and financial data are provided for the major economies of the countries in Europe, North America, Latin America, the Middle East, Africa, and Asia. Presenting a current picture of the economic conditions of the world today, the INTLINE Database coverage continues to expand both in terms of the depth of coverage within a given country as well as in the number of countries covered. Presently, there are 67 countries available in INTLINE.

The most distinguishing feature of the INTLINE Database is the timeliness of the data. The latest statistics of key economic indicators from around the world are updated in the INTLINE Database within hours of their release. The data are collected from press and wire services as well as central banks, government statistical offices and national bulletins. The series found in the INTLINE Database directly mirror the data found in these national sources. Database updates occur on a daily basis with data updated according to their frequency.

There are over 13550 series available in the INTLINE Database. These series span 15 sectors of each country's economy where available. These 15 sectors are:

- * National accounts
- * Government
- * Cyclical indicators
- * Industrial production
- * Orders
- * Wholesale and retail sales
- * Construction
- * Population
- * Labor and wages
- * Money and banking
- * Interest rates
- * Foreign exchange
- * Foreign trade
- * Balance of payments
- * Official reserves

MNEMONIC DESIGN

The INTLINE Database has a consistently defined mnemonic scheme following specific naming conventions. An understanding of this mnemonic scheme will facilitate database usage and data retrieval.

The Series Codes are alphanumeric and range from seven to thirteen characters in length. All series codes may be divided into five parts and are arranged in the following format:

Q273VBCB

<u>Position</u>	<u>Description</u>
Q273VBCB	<u>Periodicity Code</u> Occupies the first position. 'Q' represents a quarterly periodicity; 'A', annual; 'S', semiannual; 'M', monthly; 'W', weekly; 'D', daily.
Q273VBC	<u>Country Code</u> Occupies the second through fourth positions. '273' represents the 3-digit country code for Mexico. The country codes used in INTLINE follow the International Monetary Fund naming conventions. Refer to the Table of Contents for a listing of all country codes.
Q273VBCB	<u>Data Classification Code</u> Occupies the fifth position. 'V' represents value (nominal or current data). Refer to the Table of Contents for a list of all data classification codes.
Q273VBCB	<u>Sector Classification Code</u> Occupies the sixth position. 'B' represents the balance of payments sector. Refer to the Table of Contents for a list of all sector classification codes. (Please note that the foreign exchange sector code is the only sector code that will occupy the 6 th and 7 th positions of the mnemonic).
Q273VBCB	<u>Data Suffix</u> The data suffix follows the sector classification code and defines the specificity of the series. Here, 'CB' represents the current account balance. The data suffix may occupy up to seven characters in the mnemonic. Series which are seasonally adjusted will have an 'A' appended to the last position of the data suffix.

Please note that for those series codes that have an E after the country codes are in euro currency. For example, Q134EVNGDPA is the mnemonic for the gross domestic product of Germany in billions of euro.

COUNTRY CODE LISTING

The following is an alphabetical listing of the countries in the INTLINE Database and their respective 3-digit country codes. These country codes follow the International Monetary Fund naming conventions. The country code occupies the second through fourth positions of the series code.
