THANKS TO ITS INDUSTRY-LEADING TECHNOLOGICAL EXPERTISE, ROHDE & SCHWARZ IS A RELIABLE PARTNER FOR SHAPING THE FUTURE OF COMMUNICATIONS, INFORMATION AND SECURITY.

Rohde & Schwarz develops, produces and markets a wide range of electronic capital goods for industry, infrastructure operators and government customers. The independent group is among the technology and market leaders in all of its business fields, including wireless communications and RF test and measurement, broadcast and media, air traffic control and military radiocommunications, cybersecurity and network technology. A worldwide service and support network safeguards customer investments.

OUR BUSINESS FIELDS

TEST AND MEASUREMENT

T&M instruments and systems for wireless communications, aerospace and defense, automotive, research and industrial electronics applications

BROADCAST AND MEDIA

Broadcast, post production and T&M equipment for network operators, broadcasters, studios, the film industry and manufacturers of entertainment electronics

AEROSPACE | DEFENSE | SECURITY

Communications and signal monitoring technology for armed forces and air traffic control, security products for critical infrastructures as well as T&M equipment for A&D applications

NETWORKS AND CYBERSECURITY

Network technology for professional users as well as IT security products to protect communications and information

EXPLANATION OF ICONS

In this catalog, the instrument interfaces are represented by icons underneath the picture of the respective instrument. These icons are explained below.

	Icon	Explanation
Remote control		USB The instrument can be connected to a computer via universal serial bus (USB) using a USB cable with a standard B type plug.
		Mini USB The instrument can be connected to a computer via universal serial bus (USB) using a USB cable with a mini-B type plug.
		Micro USB The instrument can be connected to a computer via universal serial bus (micro USB) using a micro USB cable.
		RS-232 The instrument is equipped with an RS-232 interface.
		TCP/IP The instrument is equipped with an Ethernet interface that can be connected to a local area network (LAN).
		IEEE-488 The instrument is equipped with an IEEE-488 interface, also referred to as general purpose interface bus (GPIB). This bus is widely used for controlling instruments in laboratories.
		WLAN The instrument can be remote controlled via a wireless local area network (WLAN).
Storage		USB flash drive The instrument is equipped with a universal serial bus (USB) upstream interface that can be used to connect a USB flash drive or other USB mass storage devices with a standard A type plug.
		Removable hard disk The instrument comes with a removable hard disk, e.g. for saving measurement results.
		SD card An SD card can be inserted, e.g. for saving measurement results.
		Micro SD card A micro SD card can be inserted, e.g. for saving measurement results.
Compatibility		LabVIEW The instrument can be controlled using the LabVIEW software from National Instruments.
Display		Screen Settings, results, etc. are shown on the integrated display (3.5" to 12.1").
		Touchscreen The user can control the instrument by touching the screen with a special pen and/or one or more fingers.
Miscellaneous		DVI output An external monitor can be connected via a digital visual interface (DVI).
		VGA output The instrument can be connected to a computer via the video graphics array (VGA) interface.
		Kensington The instrument can be locked with the Kensington lock.
	 	50 Ω/1 MΩ The input impedance of the instrument can be switched between 50 Ω and 1 MΩ.

FEATURED PRODUCTS

R&S®FPL1000 signal and spectrum analyzer

The R&S®FPL1000 is a single measuring instrument for a variety of measurement tasks. It supports not only spectrum analysis, but also highly accurate power measurement with power sensors and analysis of analog and digitally modulated signals.

► [page 5](#)

R&S®Cable Rider ZPH cable and antenna analyzer

The R&S®CableRider ZPH has all the essential basic measurement capabilities required for installing and maintaining antenna systems in the field. Two different R&S®ZPH models are available to suit different needs, a pure one-port cable and antenna analyzer and a two-port model with additional spectrum analysis and tracking generator features.

► [page 5](#)

R&S®UPP audio analyzer

High measurement speed, parallel signal processing in multichannel applications, and high reliability in continuous operation are vital audio analyzer requirements – all met by the R&S®UPP audio analyzer.

LEARN MORE

dB or not dB?

True or false: $30 \text{ dBm} + 30 \text{ dBm} = 60 \text{ dBm}$

Why does 1% work out to be -40 dB one time, but 0.1 dB or 0.05 dB the next time? Sometimes even experienced engineers have trouble answering these questions. Decibels are found everywhere – in power levels, voltages, reflection coefficients, noise figures, field strengths and more.

What is a decibel and how should we use it in our calculations? This application note provides a refresher on the subject of decibels.

R&S®SMC100A signal generator

The analog R&S®SMC100A sets new standards for attractively-priced signal generators. It has the smallest size and the best price/performance ratio in its class.

► [page 6](#)

R&S®NGP800 power supply series

The R&S®NGP800 DC power supply series, comprising five models with 400 W or 800 W, provides maximum power at a variety of operating points. The two or four 200 W outputs can each supply up to 64 V or up to 20 A. Electrically equivalent and galvanically isolated outputs can be wired in series or parallel for up to 250 V or 80 A.

RF & Bench Essentials Reference Guide

This guide includes a wide range of time-domain and RF test equipment. It covers most of the tools users want to understand in more detail.

This reference guide can also be a gateway to dig into some of the details contained in a more in-depth fundamental or primer guide on specific measuring instruments.

OSCILLOSCOPES

The Rohde & Schwarz oscilloscope portfolio offers options ranging from low-cost yet powerful 50 MHz oscilloscopes to full-featured 6 GHz oscilloscopes. Designed by the RF experts at Rohde & Schwarz, all oscilloscopes feature exceptional signal integrity, high value and excellent reliability.

Use the table on the following pages to see the differences between each family.

Bandwidth

Bandwidth selection is typically the most crucial parameter when choosing an oscilloscope. Bandwidth is defined as the frequency at which a sine wave is attenuated by 3 dB or is approx. 30% smaller.

Since most signals are not sine waves (they look like square waves), you have to take into account the other frequency components that make up the signal. For example, you cannot measure a 1 GHz square wave with a 1 GHz oscilloscope – it will not look like a square wave.

Rule of thumb: $\text{Bandwidth}_{\text{Oscilloscope}} = 3 \text{ to } 5 \text{ times } f_{\text{clk of the test signal}}$

The simplest way to determine how much bandwidth the oscilloscope needs is to take 3 to 5 times the clock frequency of the signal you want to measure. For example, a high-speed USB signal at 480 Mbit/s has a clock frequency of 240 MHz which would require a 720 MHz to 1.2 GHz oscilloscope.

Update rate

The update rate, sometimes called dead time or blind time, is how fast the oscilloscope can trigger on a waveform (basically one screen's worth of data), process it and then plot it on the display. The faster it can do this, the more likely you are to see infrequent events. The update rate is specified in waveforms per second or waveforms/s. For example, with an update rate of 50 000 waveforms/s, an oscilloscope captures a waveform every 20 μs . If the oscilloscope's timebase is set to acquire 100 ns of activity across the screen, the rest of that 20 μs (20 μs – 100 ns = 19.9 μs) is consumed by processing and plotting, which means the oscilloscope is dead for 99.5% of the time. If an infrequent anomaly happens during that dead time, the engineer will never see it.

Rule of thumb: Most engineers will want an update rate as fast as possible, assuming they do not have to trade off something else to get it (e.g. memory depth). If the engineer is just interested in single shot captures (e.g. power supply turn-on or low speed serial decode and trigger), then the update rate is not that important.

Sample rate

Sample rate and memory depth are directly related. The sample rate defines how fast the oscilloscope samples and digitizes the waveform. Those samples have to be stored somewhere, which is where memory is important. The more memory you have, the higher you can keep your sample rate (which allows you to take advantage of the full bandwidth of the oscilloscope).

Rule of thumb: You typically want the sample rate to be 5 times the bandwidth of the oscilloscope to accurately reproduce the signal. For example, for a 1 GHz oscilloscope, you need a sample rate of 5 Gsample/s. There are a few times that you can get by with less (down to 2.5 times), but in general, look for a sample rate at least 5 times the bandwidth.

As mentioned, memory depth is directly related to the sample rate. The more memory depth you have, the longer you can capture at high sample rates.

Rule of thumb: Most engineers will want as much memory as they can get to maximize the amount of time captured at high sample rate.

Vertical resolution

The vertical resolution, sometimes called bits, is the number of buckets, or vertical levels, an oscilloscope can put voltages into for a waveform. When the oscilloscope is sampling the waveform, it does not have an infinite number of levels to put the sample in. It has to choose a level to put that sample in. The more levels it has to choose from, the more precise it can be. An 8-bit oscilloscope has 256 levels. A 10-bit oscilloscope has 1024. A 12-bit oscilloscope has 4096. A 16-bit oscilloscope has 65 536 levels.

Rule of thumb: In general, additional vertical resolution is most useful for signals where you are trying to see a small signal riding on top of a much larger signal. Without the additional levels, the small signal would be lost in the larger signal. Typically, larger signals are very slow in frequency.

R&S®Scope Rider RTH Handheld Oscilloscope

The perfect multipurpose tool for the lab or in the field.

When debugging embedded devices in the lab or analyzing complex problems in the field, the R&S®ScopeRider RTH offers the performance and capabilities of a lab oscilloscope as well as the form factor and ruggedness of a battery-operated handheld device.

Model overview

Model	Bandwidth	Channel (analog/digital)	Sample rate (analog/digital)	Memory depth	Update rate	Vertical resolution
R&S®RTH1002	60 MHz	2/8 (optional)	5 Gsample/s/1.25 Gsample/s	up to 12.5 Msample	50 000 waveforms/s	up to 10 bit
R&S®RTH1012	100 MHz					
R&S®RTH1022	200 MHz					
R&S®RTH1032	350 MHz					
R&S®RTH1052	500 MHz					
R&S®RTH1004	60 MHz	4/8 (optional)	5 Gsample/s/1.25 Gsample/s	up to 12.5 Msample	50 000 waveforms/s	up to 10 bit
R&S®RTH1014	100 MHz					
R&S®RTH1024	200 MHz					
R&S®RTH1034	350 MHz					
R&S®RTH1054	500 MHz					

Important facts

Specification	R&S®Scope Rider RTH	Why this is important
Update rate	50 000 waveforms/s	The faster the update rate, the faster users can find infrequent events.
Memory depth	up to 12.5 Msample	Allows capture of the longest period of time at high sample rate.
Integration	DMM, MSO, protocol analyzer, data logger	Allows debugging of low speed serial devices and mixed signal designs.
ADC resolution	10 bit	Allows users to see more detail and smaller signals.
Display	7", 800 × 480, touchscreen	Makes it easier to operate and see information on the display.

Scope of delivery

- ▶ User manual
- ▶ Power cord
- ▶ USB cable
- ▶ Passive probes for each channel

Recommended options/accessories

Description	Type
Hardware options (plug-in)	
Mixed signal option, 250 MHz, 8 digital channels	R&S®RTH-B1

Frequency counter	R&S®RTH-K33
Harmonics analysis	R&S®RTH-K34
User scripting	R&S®RTH-K38
Wireless LAN	R&S®RTH-K200/ R&S®RTH-K200US
Web interface remote control	R&S®RTH-K201
Probes	
Passive probe, 500 MHz, 10:1, isolated, 600 V CAT IV, 1000 V CAT III	R&S®RT-ZI10
Passive probe, 500 MHz, 100:1, isolated, 600 V CAT IV, 1000 V CAT III	R&S®RT-ZI11
Current probe, 100 kHz, 30 A, AC/DC	R&S®RT-ZC03

The perfect choice for

Electrical and electromechanical installation and maintenance	Education
Electronic field service and maintenance	Debugging and testing advanced power electronics

Your benefit	Features
Superior performance	<ul style="list-style-type: none"> ▶ Deep memory (up to 50 Msample) and high resolution (5 Gsample/s) ▶ Fast acquisition rate: 50000 waveforms/s ▶ 10-bit ADC ▶ Excellent sensitivity: 2 mV/div to 100 V/div ▶ Up to 200 V offset range ▶ 37 automatic measurement functions
Outstanding protection and excellent connectivity	<ul style="list-style-type: none"> ▶ Isolated channels: CAT IV 600 V/CAT III 1000 V ▶ IP51 housing that meets military requirements ▶ Wireless LAN and Ethernet for web based remote control and quick data access
8 instruments in one handheld package	<ul style="list-style-type: none"> ▶ Lab performance oscilloscope ▶ Logic analyzer ▶ Protocol analyzer ▶ Data logger ▶ Digital multimeter¹⁾ ▶ Spectrum analyzer ▶ Harmonics analyzer ▶ Frequency counter

¹⁾ Additional multimeter channel in two-channel model.

The high-speed acquisition system of the R&S®ScopeRider captures up to 50 000 waveforms/s and uncovers rare and unexpected signal anomalies

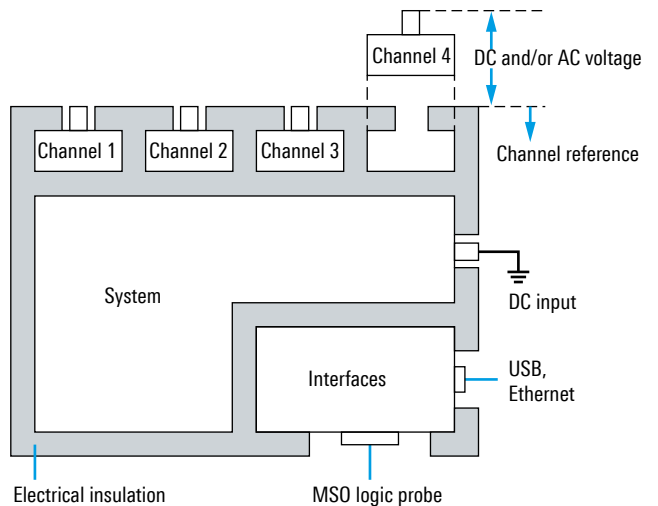

8 instruments in one – users can select the instrument they need at the push of a button

10-bit A/D converter: uncovers even small signal details

Double insulation for maximum safety

R&S®RTC1000 Oscilloscope

Get your results quicker

What sets these oscilloscopes apart from all others in their class? New, advanced technology.

- ▶ Low-noise frontend for best results
- ▶ X-in-1 instrument that offers the functionality of an oscilloscope, logic analyzer, protocol analyzer, frequency analyzer, pattern generator, function generator, digital voltmeter and component tester

Model overview

Model	Bandwidth	Channel (analog/digital)	Consists of	Max. sample rate (analog/digital)	Max. memory depth
R&S®RTC1002	50 MHz		R&S®RTC1000		
R&S®RTC1K-72	70 MHz		R&S®RTC1000 + R&S®RTC-B220

R&S®RTC1K-102M	100 MHz		R&S®RTC1000 + R&S®RTC-B221 + R&S®RTC-B1		
R&S®RTC1K-202M	200 MHz		R&S®RTC1000 + R&S®RTC-B222 + R&S®RTC-B1		
R&S®RTC1K-302M	50 MHz		R&S®RTC1000 + R&S®RTC-B223 + R&S®RTC-B1		

Important facts

Specification	R&S®RTC1000	Why this is important
Bandwidth	50/70/100/200/300 MHz (upgradeable, configurable)	Upgradeable bandwidth up to 300 MHz provides investment protection for future requirements.
Max. memory depth	2 Msample	Allows capture of the longest period of time at high sample rate.
Mixed signal option (MSO)	8 channels, upgradeable, 0.5 Gsample/s, 0.5 Msample	Ideal for analysis of digital buses and correlation with analog signals.
Multifunctional	DVM, counter, waveform generator, pattern generator, component tester	Saves desk space and is a smart investment.

Scope of delivery

- ▶ User manual
- ▶ Power cord
- ▶ R&S®RT-ZP03 single-ended passive probes for each channel

Recommended options/accessories

Description	Type
Hardware options	
Mixed signal upgrade for non-MSO models, 250 MHz	R&S®RTC-B1
Arbitrary waveform generator	R&S®RTC-B6
Software options	
I ² C/SPI serial decoding	R&S®RTC-K1
UART/RS-232/RS-422/RS-485 serial decoding	R&S®RTC-K2
CAN/LIN serial triggering and decoding	R&S®RTC-K3
Application bundle (-K1, -K2, -K3, -B6)	R&S®RTC-PK1
Option bundle	
Plastic front cover	R&S®RTC-Z1
Soft carrying bag	R&S®RTC-Z3
Rackmount kit	R&S®ZZA-RTC1K

The perfect choice for

R&D troubleshooting

Education

Production tests and repair

Electronic hobbyists

X-in-1 oscilloscope

Your benefit	Features
Get your results quicker	Fast boot and auto measurement for concise and comprehensive results
Investment protection	Expandable to your needs through software licenses
Compactness saves desk space	Highest integration of instruments in a small form factor

QuickView: automatic measurement and graphical display at the push of a button

Quickly assess your components with the integrated tester

Gather insight into the digital communications on your circuitry

R&S®RTB2000 Oscilloscope

More signal details with the power of 10

What sets these oscilloscopes apart from all others in their class? New, advanced technology.

- ▶ 10-bit ADC – see small signal details in the presence of large signals
- ▶ 10 Msample acquisition memory depth on each channel (20 Msample when interleaved)
- ▶ Large 10.1" high-resolution capacitive touchscreen with gesture support

Model overview

Model	Bandwidth	Channel (analog/digital)	Sample rate (analog/digital)	Memory depth	Update rate	Vertical resolution
R&S®RTB2002	70 MHz	2/16 (optional)	2.5 Gsample/s/1.25 Gsample/s	up to 160 Msample	50 000 waveforms/s	10 bit
R&S®RTB2004	70 MHz	4/16 (optional)	2.5 Gsample/s/1.25 Gsample/s	up to 160 Msample	50 000 waveforms/s	10 bit

Important facts

Specification	R&S®RTB2000	Why this is important
Bandwidth	70/100/200/300 MHz, upgradeable	Upgradeable bandwidth up to 300 MHz provides investment protection for future requirements.
ADC resolution	10 bit	Allows users to see more detail and smaller signals.
Max. memory depth	20 Msample (160 Msample history)	Allows capture of the longest period of time at high sample rate.
Display	10.1", 1280 × 800 pixel, capacitive touchscreen	Makes it easier to operate and see information on the display.
Update rate	50 000 waveforms/s	The faster the update rate, the faster users can find infrequent events.
Integration	DVM, counter, function generator, pattern generator, 16 channels MSO	Allows debugging of low speed serial devices and mixed signal designs.
Interfaces	USB, LAN with fast web browser and MTP	Remote control makes updating and monitoring of the instrument easy.

Scope of delivery

- ▶ Single-ended passive probes for each channel
- ▶ Power cord
- ▶ USB cable
- ▶ User manual
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
Hardware options

Easier to see and collaborate; faster to operate and interpret results

Capture more time, accurately, at full bandwidth

Features

10-bit ADC. Class-leading signal integrity
10.1" capacitive touchscreen with 1280 \times 800 resolution. Grid annotation. Split window, SmartGrid

5 Gsample/s max. sample rate with up to 200 Msample memory. 12 horizontal divisions. 1 Gsample history mode. Class-leading time-base accuracy

Power integrity measurement

R&S®RTE1000 Oscilloscope

Truly uncompromised performance

More reliable measurements, more tools and fast results, more fun to use – that’s the R&S®RTE oscilloscope. From embedded design development to power electronics analysis to general debugging, the R&S®RTE offers quick solutions for everyday T&M tasks.

Model overview

Model	Bandwidth	Channel (analog/digital)	Sample rate (analog/digital)	Memory depth	Update rate	Vertical resolution
R&S®RTE1022	200 MHz	2/16 (optional)	5 Gsample/s/ 5 Gsample/s	up to 100 Msample	> 1 000 000 waveforms/s	up to 16 bit
R&S®RTE1024	200 MHz	4/16 (optional)		up to 200 Msample		
R&S®RTE1032	300 MHz	2/16 (optional)		up to 100 Msample		
R&S®RTE1034	300 MHz	4/16 (optional)		up to 200 Msample		
R&S®RTE1052	500 MHz	2/16 (optional)		up to 100 Msample		
R&S®RTE1054	500 MHz	4/16 (optional)		up to 200 Msample		
R&S®RTE1102	1 GHz	2/16 (optional)		up to 100 Msample		
R&S®RTE1104	1 GHz	4/16 (optional)		up to 200 Msample		
R&S®RTE1152	1.5 GHz	2/16 (optional)		up to 100 Msample		
R&S®RTE1154	1.5 GHz	4/16 (optional)		up to 200 Msample		
R&S®RTE1202	2 GHz	2/16 (optional)		up to 100 Msample		
R&S®RTE1204	2 GHz	4/16 (optional)		up to 200 Msample		

Important facts

Specification	R&S®RTE	Why this is important
Update rate	> 1 000 000 waveforms/s	The faster the update rate, the faster users can find infrequent events.
Bits of vertical resolution	up to 16	Allows users to see more detail and smaller signals.
Four-channel sample rate	5 Gsample/s	Most accurate signal capture.
Memory depth	up to 200 Msample	Allows capture of the longest period of time at high sample rate.
Mask trigger in the time domain	up to 600 000 evaluations/s	If you can see it on the screen, you draw the trigger and capture it.

Scope of delivery

- ▶ Passive probes for each channel
- ▶ Power cord
- ▶ USB cable
- ▶ User manual
- ▶ 3 year warranty

Signal validation

Power integrity analysis

Your benefit	Features
No trade-offs	<ul style="list-style-type: none"> ▶ Longest signal sequences (200 Msample memory depth) at highest resolution (5 Gsample/s sampling rate) ▶ Quick detection of signal faults: more than 1 000 000 waveforms/s ▶ Most precise results: 16-bit vertical resolution in high definition mode ▶ Drag & drop signals and measurement results
High-resolution 10.4" touchscreen	<ul style="list-style-type: none"> ▶ Results in only two clicks thanks to the powerful toolbar ▶ Convenient tools such as QuickMeas, fingertip zoom and undo/redo
Multichannel spectrum analysis	<ul style="list-style-type: none"> ▶ Analysis of up to four signals in parallel ▶ Correlation of time and frequency signals ▶ Spectrogram: display changes in power and frequency over time ▶ Outstanding RF performance: high dynamic range and low inherent noise

Users can drag & drop waveforms and result windows. The R&S®SmartGrid function helps users arrange multiple diagrams or tabs on the screen. The size of individual diagrams can be further optimized by dragging the edges of the windows.

R&S®RTE oscilloscopes come with built-in spectrum analysis for up to four signals in parallel. Results can be correlated in the time and frequency domains. Analysis functions such as spectrogram (with R&S®RTE-K18 option), mask test and peak list are available.

With the R&S®RTE-B1 option, every R&S®RTE can be turned into a mixed signal oscilloscope with 16 digital channels. This example shows the ramp signal of a 4-bit ADC with analog and digital channels correlated to an SPI bus that controls the ADC.

The HD mode increases the vertical resolution of the R&S®RTE to up to 16 bit. This results in sharper waveforms, showing signal details that would otherwise be masked by noise.

R&S®RTO2000 Oscilloscope

Turn your signals into success

Offering bandwidths from 600 MHz to 6 GHz, R&S®RTO2000 oscilloscopes excel at both time domain and frequency domain testing. Thanks to excellent signal fidelity, responsiveness of 1 million waveforms/s and up to 16-bit vertical resolution, you can measure quickly with confidence. The capacitive touchscreen with SmartGrid makes the R&S®RTO2000 easy and intuitive to use.

Model overview

Model	Bandwidth	Channel (analog/digital)	Sample rate in Gsample/s (analog/digital)	Memory depth	Update rate	Bits of vertical resolution
R&S®RTO2002	600 MHz	2/16 (optional)		up to 1 Gsample		
R&S®RTO2004	600 MHz	4/16 (optional)		up to 2 Gsample		
R&S®RTO2012	1 GHz	2/16 (optional)		up to 1 Gsample		
R&S®RTO2014	1 GHz	4/16 (optional)	up to 10 Gsample/s/5 Gsample/s	up to 2 Gsample		
R&S®RTO2022	2 GHz	2/16 (optional)		up to 1 Gsample	> 1 000 000 waveforms/s	up to 16 bit
R&S®RTO2024	2 GHz	4/16 (optional)		up to 2 Gsample		
R&S®RTO2032	3 GHz	2/16 (optional)		up to 1 Gsample		
R&S®RTO2034	3 GHz					
R&S®RTO2044	4 GHz	4/16 (optional)	up to 20 Gsample/s/5 Gsample/s	up to 2 Gsample		
R&S®RTO2064	6 GHz					

Important facts

Specification	R&S®RTO2000	Why this is important
Update rate	> 1 000 000 waveforms/s	The faster the update rate, the faster users can find infrequent events.
Bits of vertical resolution	up to 16	Allows user to see more detail and smaller signals.
Trigger sensitivity	0.04 div	Allows user to trigger on the smallest signal details.
Memory depth	up to 2 Gsample	Allow capture of the longest period of time at high sample rate.
Zone trigger	time and frequency domains	Industry-exclusive frequency zone trigger enables powerful debugging across the time and frequency domains, and even works with history mode to see previous zone triggers.

Scope of delivery

The perfect choice for

All debugging tasks

Integrated spectrum analysis (EMI test, connected devices, embedded systems)

Low speed serial debugging

Power integrity and analysis

Your benefit

No trade-offs

Debug in the domain most familiar to you

Class-leading 16 bit; and low noise

Features

Best in class update rate, memory depth, triggering, sample rate, MSO; integrated hardware based spectrum analysis

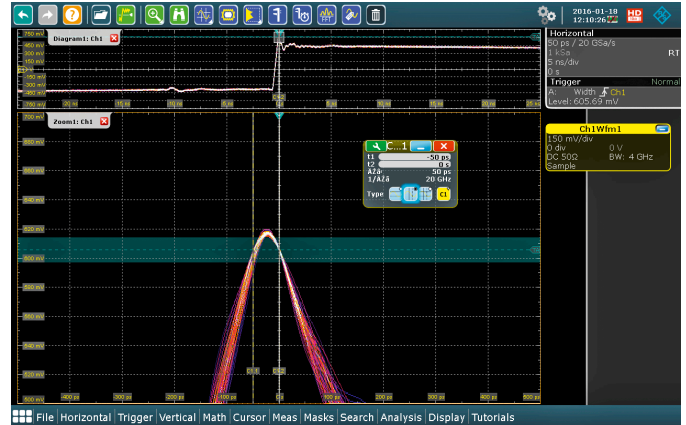

Best in class time domain and frequency domain capability. Industry first ability to trigger in the time or frequency domain and see both domains time correlated.

High definition with 256 times the resolution of 8 bit oscilloscopes. 1 mV/div at full bandwidth

Up to 16-bit vertical resolution:

The high definition mode (HD mode) increases the vertical resolution of the R&S®RTO2000 to up to 16 bit. This results in sharper waveforms, showing signal details that would otherwise be masked by noise.

Trigger on any signal detail you can see:

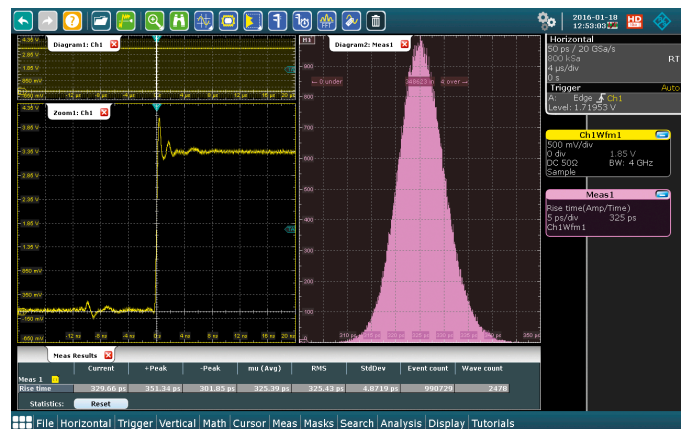

The unique digital trigger system from Rohde & Schwarz minimizes trigger jitter without the need postprocessing correction. It features high sensitivity that can be extended up to 16 bit in HD mode. Now you can reliably isolate even the smallest signals.

Advanced user interface:

High-resolution capacitive touchscreen allows users to perform functions through gestures:

- ▶ Customize waveform displays
- ▶ Drag & drop signal placement
- ▶ Superposition windows in multiple tabs
- ▶ Quickly access important tools through app cockpit

Deep toolset for signal analysis:

R&S®RTO oscilloscopes offer over 90 measurement functions. The functions are organized by type into amplitude and time domain measurements, jitter, eye, histogram and spectral measurements. Statistics, histograms as well as trend and track functions facilitate detailed analysis of the measurement results. The measurement results can also be used in math functions.

Featured content for the R&S®RTE1000 and the R&S®RTO2000

Five techniques for fast, accurate power integrity measurements

Industry dynamics are driving both a decrease in rail voltage values as well as tighter tolerances across a wide range of power rails. Making an accurate ripple measurement on a 1 V rail with 2% tolerance, for example, is difficult on all oscilloscopes.

This guide describes how to set up your oscilloscope for accurate power integrity measurements.

- ▶ Tip 1: Adjust viewing characteristics
- ▶ Tip 2: Lower noise
- ▶ Tip 3: Achieve sufficient offset
- ▶ Tip 4: Evaluate switching and EMI
- ▶ Tip 5: Accelerate measurement time
- ▶ www.rohde-schwarz.com/pi-ebook

Designed for EMI testing

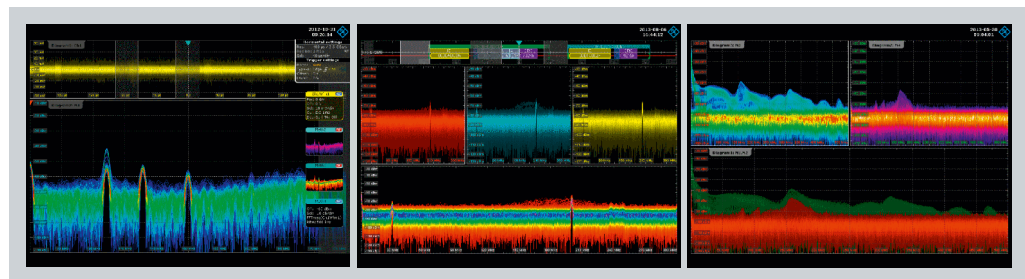

R&D engineers: Are you missing your NPI deadlines due to EMI compliance issues? Learn how to use oscilloscopes to improve your time to market – brought to you by Rohde&Schwarz, the EMI/EMC market leader.

The challenges of testing EMI early in the product development cycle are multifold. In this guide, we break down the EMI design test process into locate, capture, and analyze. The guide enables engineers to discover and analyze EMI with a more systematic and methodical approach in order to solve their problems.

¹⁾ Current probes without R&S®Probe Interface require R&S®RT-ZA13 power supply.

²⁾ Probes need 50 Ω input coupling. For oscilloscopes with only 1 M Ω input, a BNC feedthrough adapter is required.

POWER SUPPLIES

Number of channels

Depending on the application and requirements, you can select a power supply unit with 1, 2, 3 or 4 channels.

In many cases, a single output will be sufficient. However, multi-output supplies can deliver important advantages in applications that require, for example, ± 15 V simultaneously. A multi-output supply with independently controllable outputs is usually more versatile than a set of individual supplies. Using a single multi-output supply significantly reduces costs.

Output power

The maximum power is determined by the maximum voltage and current demanded by the device. All multichannel Rohde&Schwarz power supplies allow parallel and serial operation to achieve higher voltage/current output.

Readback accuracy and sense lines

Modern power supplies include a multimeter that measures the voltage/current consumed by the device under test (DUT). The readback accuracy specifies the accuracy of these measurements.

The output cables that connect a power supply's output to its load have some resistance, and as current flow increases there will be a voltage drop across the cables. The sense lines connected from the supply to the load compensate for these unwanted voltage drops since the voltage can be measured directly at the DUT.

Most Rohde&Schwarz power supplies are equipped with sense lines.

Protection functions

To safeguard the instrument and the DUT, Rohde&Schwarz power supplies provide a variety of protection functions.

Depending on the model, users can separately set the maximum current (electronic fuse, overcurrent protection, OCP), the maximum voltage (overvoltage protection, OVP) and the maximum power (overpower protection, OPP) for each channel. When such a limit is reached, the affected output channel will be switched off.

Overtemperature protection prevents the instrument from overheating.

R&S®HM7042-5 Triple Power Supply

Lab performance in a rugged and portable design

- ▶ High-performance, inexpensive laboratory power supply
- ▶ Floating, overload and short-circuit proof outputs
- ▶ Separate voltage and current displays for each output
- ▶ Protection of sensitive loads by current limit or electronic fuse
- ▶ Pushbutton to activate/deactivate all outputs
- ▶ Low residual ripple, high output power, excellent regulation
- ▶ Parallel operation for higher current and serial operation for higher voltage
- ▶ Temperature-controlled fan

Model overview

Model	Number of outputs	Voltage output	Current output	Total power output	Resolution
R&S®HM7042-5	3	<ul style="list-style-type: none"> ▶ channel 1, channel 3: 0 V to 32 V ▶ channel 2: 0 V to 5.5 V 	<ul style="list-style-type: none"> ▶ channel 1, channel 3: 0 A to 2 A ▶ channel 2: 0 A to 5 A 	155.5 W	<ul style="list-style-type: none"> ▶ channel 1, channel 3: 10 mV/ 1 mA ▶ channel 2: 10 mV/ 10 mA

Scope of delivery

- ▶ Power cable
- ▶ Quick start guide
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
19" rack adapter, 2 HU	R&S®HZ42

The perfect choice for

Education

Research and design

Maintenance and repair

Production testing

Your benefit

Features

Straightforward operation

All functions can be operated from the front panel; separate rotary knobs for each channel to adjust voltage and current

The separate output channels can work like individual power supplies

All channels are galvanically separated and can be combined for higher voltage or current

Small, compact and quiet

Combination of primary transformer, secondary switching regulator and additional linear control reduces weight and size

Parallel and serial operating mode

Because all channels are galvanically separated, they can be combined:

- ▶ In the parallel operating mode, channels can be bundled to achieve higher currents
- ▶ In the serial operating mode, channels can be combined for higher output voltages

R&S®NGE100B Power Supply Series

Brochure

Fact sheet

Meets your daily needs

What sets these power supplies apart from others in their class?

- ▶ All channels are galvanically isolated and earth-free
- ▶ All channels are electrically equivalent with the same voltage, current and power
- ▶ Parallel and serial operation
- ▶ Protection functions to safeguard instrument and DUT
- ▶ Tracking and link functions
- ▶ Remote control via USB interface and optional LAN or wireless LAN, unique in this class

Model overview

Model	Channel count	Max. voltage	Max. current	Max. power	Resolution
R&S®NGE102B	2	2 × 32 V	2 × 3 A	66 W	10 mV/1 mA
R&S®NGE103B	3	3 × 32 V	3 × 3 A	100 W	10 mV/1 mA

Important facts

Specification	R&S®NGE100	Why this is important
Interface options	USB, LAN (optional) Wi-Fi (optional)	Modern and common interface capabilities allow quick and ready access to control and program the instrument.
Dimensions	½ 19" 2 HU	A small footprint for the power supply allows placement in tight lab space conditions or university settings as well as high-density manufacturing and rack applications.
Arbitrary function generation	EasyArb	Easily programmable time/voltage or time/current curves.

Scope of delivery

- ▶ Power cable
- ▶ Quick start guide
- ▶ 3 year warranty

R&S®HMC804x Power Supply

Watch the video review from
Elektor

Compact and easy to use

One, two or three channels – the R&S®HMC804x power supplies with their specifications and wide range of functions are ideal for use in development labs and industrial environments. Thanks to their high energy efficiency, the linear power supplies remain cool and quiet, even at maximum load. Practical interfaces and connectors allow users to work quickly and conveniently with the R&S®HMC804x. Convenient functions enable the instruments to be used in special applications.

R&S®HMC8041G	1	1 × 32 V	1 × 10 A	100 W	adjustable for each channel	•
R&S®HMC8042	2	2 × 32 V	2 × 5 A	100 W	adjustable for each channel	–
R&S®HMC8042G	2	2 × 32 V	2 × 5 A	100 W	adjustable for each channel	•
R&S®HMC8043	3	3 × 32 V	3 × 3 A	99 W	adjustable for each channel	–
R&S®HMC8043G	3	3 × 32 V	3 × 3 A	99 W	adjustable for each channel	•

Important facts

Specification	R&S®HMC804x	Why this is important
Channel combining	fuse link technology	Electronic fuses that can be individually combined for each channel allow the overcurrent or voltage surge protection to be set for each channel individually. For instance, a channel with a connected fan can continue to run while all other channels have been switched off.
Arbitrary V/I curves	available EasyArb function	Allows users to create individual arbitrary V/I curves directly on the device or through remote programming.

Scope of delivery

- ▶ Power cable
- ▶ Printed operating manual
- ▶ Software CD
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
19" rackmount kit, 2 HU	R&S®HZC95

The perfect choice for

Engineering lab

Production testing

Education

Maintenance and repair

Your benefit	Features
Clear display of all measured parameters	The brilliant color display shows voltage current and power values in real time
Flexible channel configurations for up to 90 V	All channels are galvanically isolated and can be combined to drive balanced circuitries or for higher voltages/currents
Flexible overcurrent protection	<ul style="list-style-type: none"> ▶ Fuse link technology allows you to individually combine the electronic fuses in each channel ▶ A fuse delay can be set to prevent too early switch-off due to a short current spike
Programmable time/voltage or time/current sequences	Arbitrary waveforms can be generated for voltage and current. Function can be configured and executed via control panel or external interface
EasyRamp function	After switching on the function, voltage will increase practically linear to the set value

Electronic fuses, overvoltage protection

Overcurrent/overvoltage protection can be set for each channel individually. The electronic fuses can be linked to other channels. In this case, all linked channels will be switched off as soon as one reaches a limit. Even the delay time can be set to prevent premature switch-off due to short current spikes.

EasyArb

EasyArb is the time/current flow or time/voltage curve that is individually programmable in each channel, with up to 512 points. Programming is possible via remote software or directly on the instrument.

EasyRamp function

Sometimes test sequences should avoid the abrupt rise of the supply voltage. The EasyRamp function allows users to simulate a startup curve. After the channels are switched on, the increase in output voltage will be practically linear to the set voltage value within a defined time span.

Sequencing function

The R&S®HMC804x power supply includes a sequencing function that can be adjusted via a menu. Sequencing enables users to automatically and consecutively connect available channels to the device under test, with adjustable time offsets when the MASTER on/off key is activated.

Ideal for industrial environment: Power supply units in industrial production are often found in 19" racks. All R&S®HMC804x models can be integrated into 19" racks with the R&S®HMC95 rackmounting kits.

WAGO cage clamp: To facilitate typical calibration setups, the rear panel connector was designed with a WAGO cage clamp.

R&S®HMP Power Supply Series

Up to four channels in a single instrument

The R&S®HMP power supplies are primarily designed for industrial use – for production environments as well as for development labs. These rugged instruments offer high efficiency with low residual ripple and many protection functions.

- ▶ Four models: 2 or 3 channels with 188 W total output power, 3 or 4 channels with 384 W total output power
- ▶ Galvanically isolated, floating outputs with overload and short-circuit protection
- ▶ Remote sensing eliminates voltage drops on the load leads
- ▶ Comfortable programming features and 19" rack adapters ensure perfect integration into production environments

Model overview

Model	No. of channels	Output voltage per channel	Output current per channel	Total output power	Max. output power per channel	Max. voltage in serial operation	Max. current in parallel operation
R&S®HMP2020	2	0 V to 32 V	channel 1: 0 A to 10 A channel 2: 0 A to 5 A	188 W	channel 1: 160 W channel 2: 80 W	64 V	15 A
R&S®HMP2030	3		0 A to 5 A	188 W	80 W	96 V	15 A
R&S®HMP4030	3		0 A to 10 A	384 W	160 W	96 V	30 A
R&S®HMP4040	4		0 A to 10 A	384 W	160 W	128 V	40 A

Important facts

Specification	R&S®HMP2020/2030; R&S®HMP4030/4040	Why this is important
Number of output channels	2/3 (all equal); 3/4 (all equal)	More channels in a compact package provide more flexibility for any specific application, especially with equal channels
Total output power	max. 188 W; max. 384 W	With more output power, DUTs with more power consumption can be driven
Max. output power per channel	80 W (R&S®HMP2020: 160 W); 160 W	Same output power on all channels provides more flexible configuration in specific applications
Max. output voltage	32 V (all channels); 32 V (all channels)	With the same output voltage on each channel, there are no limitations for using channels in different applications
Max. current per channel	5 A (R&S®HMP2020: 10 A); 10 A	With the same output current on each channel, there are no limitations for using channels in different applications
Sense function	yes, for each channel	Sense function provides more accurate voltage at the DUT especially when high current is needed
Dimensions (W × H × D)	285 mm × 95 mm × 405 mm; 285 mm × 136 mm × 405 mm	The size of the instrument determines how much space is left on the workbench for the measurement setup
Weight	7.8 kg/8.0 kg; 12.4 kg/12.8 kg	If the instrument has to be used in different places, it is better to have a lighter instrument

Scope of delivery

- ▶ Quick start guide
- ▶ Set of power cables
- ▶ 3 year warranty
- ▶ Dual interface with USB and LAN is installed as standard.

19" rack adapter, 2 HU, for R&S®HMP2020/HMP2030	R&S®HZ42
19" rack adapter, 4 HU, for R&S®HMP4030/HMP4040	R&S®HWP91

The perfect choice for

Engineering lab

Production testing

Maintenance and repair

General purpose

Connections for all channels – including sense lines – are also provided on the rear panel (shown here: R&S®HMP4040)

All channels galvanically isolated and floating

The R&S®HMP power supply family consists of instruments with two, three or four channels. The circuitry of each channel is completely isolated from the others; there is no connection to chassis ground. This makes it easy to combine the channels to drive balanced circuitries that might need +12 V/–12 V, for example, and avoids any ground problems in complex DUTs.

Supplying balanced circuits

Two channels can be connected together to supply balanced circuits with e.g. +12 V/–12 V.

Your benefit	Features
Up to 4 channels in a single compact box	Flexible configuration for any specific application, including sense lines for each channel to compensate voltage drops over the supply leads
Channels galvanically isolated and floating	Serial operation with up to 128 V or parallel operation with up to 40 A
Overcurrent protection (electronic fuse) and overvoltage protection	To safeguard the instrument and the DUT. The fuse link technology switches off all selected channels when one of them reaches its current limit
Easily programmable time/voltage or time/current curves	To vary voltage or current during a test sequence; can be programmed manually via the user interface or via the external interfaces

Intuitive to use

All basic R&S®HMP power supply functions can be operated directly via keys on the front panel. It is only necessary to use the menu level for special functions that are needed less frequently.

Color coding of operating states

All settings and operating conditions, including the output power and the status of the protection functions, are shown on the display and indicated by the colors of the illuminated channel keys. The colors of the illuminated keys indicate the different operating conditions:

- ▶ Active channel in constant voltage mode: green
- ▶ Active channel in constant current mode: red
- ▶ Channel in setting mode: blue

All settings and operating states are clearly visualized. Constant voltage mode is indicated by a green key, constant current mode is indicated by a red key. The key color changes to blue in setting mode.

R&S®NGL200 Power Supply Series

What sets these power supplies apart from others?

- ▶ Fast regulation of output voltage with minimum overshoot and very fast load recovery time
- ▶ Minimum residual ripple and noise to supply interference-free voltage to sensitive DUTs
- ▶ Readings with up to 6½ digit resolution are perfect for characterizing devices that have low power consumption in standby mode and high current in full load operation
- ▶ Two quadrants: operates as source or sink

Model overview

Model	Number of channels	Max. output power	Output power per channel	Output voltage per channel	Output current per channel	Load recovery time	Resolution
R&S®NGL201	1	60 W	max. 60 W	0 V to 20 V	<ul style="list-style-type: none"> ▶ ≤ 6 V: 6 A ▶ > 6 V: 3 A 	< 30 μs	1 mV/0.1 mA
R&S®NGL202	2	120 W					

Important facts

Specification	R&S®NGL200	Why this is important
Large high-resolution touchscreen	TFT 5" 800 × 480 pixels WVGA touch	Easy operation and display of a wide variety of additional information such as power values and statistics.
Various protection and safety functions	OVP, OCP, OPP, OTP, adjustable limits	Protect your DUT and the power supply.
Sense function for lead resistance compensation	<ul style="list-style-type: none"> ▶ R&S®NGL201: front and rear panels ▶ R&S®NGL202: rear panel 	Regulate the voltage directly at the load, compensating for voltage drops over the supply leads.
QuickArb	<ul style="list-style-type: none"> ▶ dwell time: 1 ms to 10 s ▶ maximum number of points: 4096 	Simulate different battery charging conditions or program very short voltage drops to test the power-up behavior of a DUT.
Remote control via various interfaces	USB, Ethernet, WLAN (optional), IEEE-488 (optional)	Key for integration into test systems and automated operation via scripts.
Fast command processing time	typ. < 6 ms	Complex measurement sequences require ever faster setting, measuring and command processing times.

Scope of delivery

- ▶ Power cord
- ▶ Quick start guide
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
IEEE-488 (GPIB) interface	R&S®NGL-B105
Wireless LAN remote control	R&S®NGL-K102
Digital I/O trigger	R&S®NGE-K103
19" rack adapter, 2 HU	R&S®HZN96

Optimized load recovery time

Power supplies usually respond to abrupt load changes with overshoot and slow recovery times. Thanks to specially optimized control circuits, the R&S®NGL200 series achieves recovery times of < 30 μs with minimal overshoot, making them perfect for supplying sensitive components

The perfect choice for	
Battery tests	Power consumption tests
Simulation of voltage drops	Supplying sensitive designs

Overvoltage protection (OVP), overpower protection (OPP)

If the voltage/power exceeds the configured maximum value, the channel is switched off and the corresponding symbol flashes on the display.

Overcurrent protection (electronic fuse, OCP)

The channels of R&S®NGL200 power supplies provide electronic fuses that can be set individually. If the channel current exceeds the set current, the channel is automatically switched off and a message is displayed.

QuickArb function

The Arb function lets you configure time/voltage or time/current sequences. With up to 4096 points and a dwell time resolution of up to 1 ms, the QuickArb function sets new standards.

Easy Ramp function

The output voltage can be increased continuously within a time frame of 10 ms to 10 s to avoid an abrupt rise of the supply voltage as is sometimes required by sensitive applications.

Your benefit	Features
Optimized load recovery time with minimal overshoot	Due to the optimized load recovery time of < 30 μs with minimal overshoot during challenging load conditions, the R&S®NGL200 is perfect when testing IoT and other battery-powered devices which require very little current in sleep mode and abruptly increase current when switching to transmit mode.
Low ripple and noise	To supply interference-free voltage to sensitive designs such as complex semiconductors and to support the development of power amplifiers and MMICs.
Sink and source operation	The linear two-quadrant output amplifier design of the R&S®NGL200 enables sink and source operation to simulate batteries and loads.
6½ digit resolution	With up to 6½ digit resolution when measuring voltage, current and power, the R&S®NGL200 is optimal for characterization of devices with low standby power consumption and high current in full load operation. It can replace an additional DMM in many applications.

Easy operation: The high-resolution capacitive touchscreen is the central operating element for R&S®NGL200 power supplies. Icons clearly show the status of the set protection levels or special functions.

Active channels in constant voltage mode light up green, while red is used for constant current mode. When the channels are switched on, the key lights up blue (active).

Readings with up to 6½ digit resolution: With a resolution of up to 6½ digits when measuring voltage, current and power, the R&S®NGL200 power supplies are perfect for measurements on devices that have low power consumption in standby mode and high current in full load operation. The large high-resolution display provides a lot of additional information such as power values and statistics.

Two-quadrant operation, minimum ripple and noise: The architecture of the R&S®NGL200 power supplies allows them to function both as a source and a sink. The power automatically switches from sink and source mode. In this example, channel 2 is operating as a load. The linear design of the output stages reduces residual ripple and noise to a minimum and makes the R&S®NGL the perfect tool to support the development of power amplifiers and MMICs.

R&S®NGM200 Power Supply Series

High-speed accuracy

What sets these power supplies apart from others in their class?

- ▶ All channels are galvanically isolated and earth-free
- ▶ All channels are electrically equivalent with the same voltage, current and power
- ▶ Parallel and serial operation
- ▶ Protection functions to safeguard instrument and DUT
- ▶ Tracking and link functions
- ▶ Remote control via USB interface and optional LAN or wireless LAN, unique in this class

Model overview

Model	Channel count	Max. output power	Output power per channel	Output voltage per channel	Output current per channel	Load recovery time	Max. readback resolution
R&S®NGM201	1	60 W	max. 60 W	0 V to 20 V	≤ 6 V: 6 A; > 6 V: 3 A	< 30 μs	1 μV/10 nA
R&S®NGM202	2	120 W	3 x 3 A				

Important facts

Specification	R&S®NGM200	Why this is important
Number of channels	1/2	More channels provide more flexibility for any specific application.
Max. output power per channel	60 W	With more output power, DUTs with more power consumption can be driven.
Voltage ripple and noise (20 Hz to 20 MHz)	< 500 μV (RMS), < 2 mV (V _{pp})	Allows the instrument to supply interference-free voltage to sensitive DUTs with advanced electronic circuitry that is often sensitive to interference on the supply lines.
Load recovery time (20 mV)	< 30 μs	Important to supply DUTs when switching from low power consumption in standby mode to high current in full load operation without creating voltage drops or overshoots.
Max. measurement speed	500 000 sample/s (2 μs)	High-speed acquisition, allows detection of spikes in the microsecond range that cannot be detected with slower instruments.
Protection functions	OCP/OVP/OPP/OTP	These functions safeguard the instrument and the device under test from damage.

Optimized load recovery time

Under challenging load conditions, most power supplies respond with slow recovery times and overshoots. Specially developed circuits in the R&S®NGM200 power supplies achieve a load recovery time of < 30 μs with minimal overshoot, making them perfect for supplying sensitive components.

The perfect choice for

Battery tests	Power consumption tests
Simulation of voltage drops	Supplying sensitive designs

Your benefit	Features
Minimal overshoot from abrupt load changes	<ul style="list-style-type: none"> ▶ Optimized load recovery time < 30 μs ▶ Handles abrupt load changes from a few μA to the ampere range without creating voltage drops or overshoots
Supply interference-free voltage to sensitive designs	<p>Low ripple and noise values allow you to supply interference-free voltage to sensitive designs such as complex semiconductors and to support the development of power amplifiers and MMICs</p> <ul style="list-style-type: none"> ▶ Acquisition rate: up to 500 ksample/s ▶ Voltage and current results available every 2 μs ▶ On the two-channel R&S®NGM202, data acquisition on both channels in parallel
Capture fast variations in voltage/current	<ul style="list-style-type: none"> ▶ Simulate the actual battery output performance ▶ Testing can be based on a selected battery model ▶ Battery capacity, state of charge (SoC) and open circuit voltage (Voc) can be set to any state to test the device under specific circumstances
Realistic battery simulation	

Readings with up to 6 ½ digit resolution:

With a resolution of up to 6 ½ digits when measuring voltage, current and power, the R&S®NGM200 power supplies are perfect for characterizing devices that have low power consumption in standby mode and high current in full load operation. Two voltage measurement ranges and four current measurement ranges provide high accuracy and resolutions down to 1 μV/10 nA.

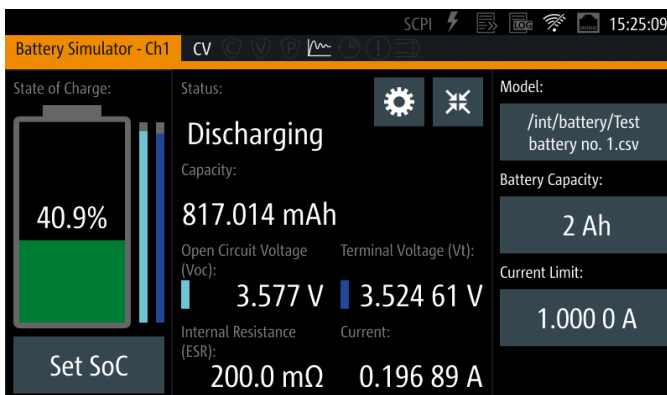

The high-resolution display provides additional information such as power values and statistics.

Two-quadrant operation, minimum ripple and noise:

The architecture of the R&S®NGM200 power supplies allows them to function both as a source and a sink. The instruments automatically switch between sink and source operation. In this example, channel 2 works as a load.

The linear design of the output stages reduces residual ripple and noise to a minimum and makes them perfect for the development of power amplifiers and MMICs.

Battery simulation:

When battery-operated devices have to be optimized for lifecycle, the discharging behavior of the battery type needs to be considered. The battery simulator function makes it possible to simulate the real battery output performance. Testing can be based on a selected battery model, and battery capacity, SoC and Voc can be set to any state to test the device under specific circumstances.

The charging behavior of a battery can also be simulated, for example when designing battery chargers. In this application, the R&S®NGM200 is used in sink mode.

Easy operation:

The high-resolution capacitive touchscreen is the central operating element for the R&S®NGM200 power supplies. Icons clearly show the status of set protection levels or special functions. When the power supply is in constant voltage mode, the numbers and the keys light up green. Red is used for constant current mode. The Output button lights up blue to indicate that channels are switched on (active).

R&S®NGP800 Power Supply Series

Boost your efficiency with quad-core power

The R&S®NGP800 DC power supply series, comprising five models with 400 W or 800 W, provides maximum power at a variety of operating points. The two or four 200 W outputs can each supply up to 64 V or up to 20 A. Electrically equivalent and galvanically isolated outputs can be wired in series or parallel for up to 250 V or 80 A.

All R&S®NGP800 power supplies include remote sense terminals, USB and a LAN interface. A user-installable GPIB interface, a digital trigger I/O, an analog input and a wireless LAN interface are optional, making these instruments great on the bench or in an automated test system.

Model overview						
Model	Channel count	Total output power	Readback resolution	Voltage per channel	Output current per channel	Output power per channel
R&S®NGP802	2	400 W	▶ voltage: 1 mV	0 V to 32 V	20 A	200 W
R&S®NGP804	2	400 W	▶ current: 0.5 mA	0 V to 32 V	20 A	200 W
R&S®NGP814	4	800 W		▶ CH1, CH2: 0 V to 32 V ▶ CH3, CH4: 0 V to 64 V	▶ CH1, CH2: 20 A ▶ CH3, CH4: 10 A	▶ 200 W
R&S®NGP822	2	400 W		0 V to 64 V	10 A	200 W
R&S®NGP824	4	800 W		0 V to 64 V	10 A	200 W

Important facts		
Specification	R&S®NGP800	Why this is important
Max. output power	400 W/800 W	For power hungry devices
Number of outputs	2/4	Powers up to 4 DUTs simultaneously
Max. voltage per output	32 V/64 V	Covers 48 V applications
Max. current per output	20 A/10 A	Meets high current consumption requirements
Max. power per output	200 W	Gets the full 200 W on each output (no shared total power among channels)
Programming resolution	1 mV/0.5 mA	Accurately sets your supply voltage and current
Readback resolution	1 mV/0.5 mA	Replaces a DMM in many applications
Acquisition rate	125 sample/s	Great for in-depth post analysis
Display	5" 800 × 480 pixel touch	Enter values much faster with intuitive touch display

Parallel operation – max. 80 A

Serial operation – max. 250 V

Parallel and serial operation

In case your application requires more voltage or current, connect the outputs in series or parallel and get up to 250 V (R&S®NGP824) or 80 A (R&S®NGP804). Using the tracking function, voltage and current are adjusted on all selected channels simultaneously.

R&S®HM8143 Power Supply

Data sheet

Fact sheet

Flexible solution for special applications

The R&S®HM8143 power supply is the perfect choice whenever two-quadrant operation is needed. Besides the source functionality, it also provides electronic loads to accurately sink current and dissipate power in a controlled manner, for example to emulate the characteristics of a battery being charged or unloaded. The R&S®HM8143 offers two channels with up to 30 V source and sink functionality plus one source channel with 5 V. Electronic fuse and modulation inputs are additional features.

Model overview

Model	Channel count	Max. voltage	Max. current	Max. power
R&S®HM8143	3	2 × 30 V, 1 × 5 V	3 × 2 A	130 W

Recommended options/accessories

Description	Type
19" rackmount kit, 2 HU	R&S®HZ42

The perfect choice for

Engineering lab

Production testing

Simulation of battery charging process

Maintenance and repair

Your benefit	Features
Two channels with source/sink functionality	Two-quadrant functionality can be used to source or sink current, e.g. to emulate any charging/unloading application
Additional 5 V source channel	Can be used to supply 5 V circuitries without needing another instrument
Electronic fuse	Overcurrent protection can be set to switch off all channels in case the configured current limit is overdriven
Modulation inputs	Via external modulation signals, the R&S®HM8143 can be used as a power amplifier, for example to supply AC motors

Parallel and serial operating mode

In the parallel operating mode, channels can be bundled to achieve higher currents. In the serial operating mode, channels can be combined for higher output voltages.

Modulation inputs

The R&S®HM8143 provides two modulation inputs on the rear, so it can be used as a power amplifier with a frequency range from DC to 50 kHz. Applications include testing of AC motors, relays, etc.

Electronic fuse

In order to provide even better protection than current limiting, the R&S®HM8143 offers the feature of an electronic fuse. As soon as the current limit is reached, all outputs are simultaneously disabled.

Arbitrary function

The arbitrary mode can be used to generate a time/voltage flow. A table comprising up to 1024 voltage and time values can be defined using external software tools.

R&S®HM8143 power supply

SIGNAL GENERATORS

Frequency range

The frequency range is the most important specification when selecting a suitable signal generator. The generator's upper and lower frequency limits must cover the needs of the application.

Output power

Output power is another key specification for selecting a signal generator. The higher the available power, the more likely you will be able to compensate for losses in the setup caused by cabling and components.

Instruments equipped with an electronic step attenuator provide very accurate low power levels and are not subject to the wear and tear of conventional mechanical attenuators.

Spectral purity

There are several measurements for assessing the spectral purity of a signal generator, including phase noise, spurious, harmonics and subharmonics. Phase noise measures the jitter of a signal. The better the spectral purity of a signal generator, the less it influences DUT measurements.

CW or modulated

Continuous wave (CW) generators provide only an unmodulated carrier frequency whereas analog signal generators can modulate the carrier frequency with e.g. AM, FM, ϕ M and pulse modulation.

R&S®HMF25xx Arbitrary Function Generator

Accurate, versatile and affordable

- ▶ Two models: the R&S®HMF2525 with 25 MHz and the R&S®HMF2550 with 50 MHz maximum frequency
- ▶ 14-bit resolution and 8 ns rise time
- ▶ As well as standard waveforms such as sine, rectangle and triangle, the instruments provide powerful arbitrary signal functionality. In addition to predefined signal shapes such as $\sin(x)/x$, white or pink noise, they can also output customer-specific, arbitrary shapes with a signal length of up to 256 ksample
- ▶ The burst, sweep, gating, internal and external triggering operating modes and the AM, FM, PM, PWM and FSK modulation functions (in each case internal and external) can be applied to all signals

Model overview

Model	Frequency range	Output voltage	Total harmonic distortion	Arbitrary waveform vertical resolution	Arbitrary waveform signal memory length	Interface
R&S®HMF2525	10 μ Hz to 25 MHz	5 mV to 10 V (V_{pp}) (into 50 Ω) 10 mV to 20 V (V_{pp}) (open circuit)	typ. 0.04% ($f \leq 100$ kHz)	14 bit	up to 256k points	dual-interface USB/RS-232, opt. LAN/USB or IEEE-488 (GPIB)
R&S®HMF2550	10 μ Hz to 50 MHz	5 mV to 10 V (V_{pp}) (into 50 Ω) 10 mV to 20 V (V_{pp}) (open circuit)	typ. 0.04% ($f \leq 100$ kHz)	14 bit	up to 256k points	dual-interface USB/RS-232, opt. LAN/USB or IEEE-488 (GPIB)

Important facts

Specification	R&S®HMF2525/2550	Why this is important
Widest measurement range across all functions	R&S®HMF2525 <ul style="list-style-type: none"> ▶ sine: 10 μHz to 25 MHz ▶ square: 10 μHz to 25 MHz ▶ pulse: 100 μHz to 12.5 MHz ▶ ramp/triangle: 10 μHz to 5 MHz R&S®HMF2550 <ul style="list-style-type: none"> ▶ sine: 10 μHz to 50 MHz ▶ square: 10 μHz to 50 MHz ▶ pulse: 100 μHz to 25 MHz ▶ ramp/triangle: 10 μHz to 10 MHz 	Allows utilization of the function generator for more applications and use cases.
Crisp color display	3.5" color TFT QVGA	See crisp representation of the waveform and all parameters.

Scope of delivery

- ▶ User manual
- ▶ Power cord
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
Options and system components	
Dual Ethernet/USB interface	R&S®HO732
IEEE-488 (GPIB) interface	R&S®HO740
19" rackmount kit, 2 HU	R&S®HZ42

Education

General purpose

Your benefit	Features
Powerful pulse generator	Provides pulses with a recurrence rate of up to 12.5 MHz/25 MHz; the pulse width can be set from 15 ns to 999 s with a resolution of 5 ns. Rise/fall time can be selected from 8 ns to 500 ns – a very useful feature when characterizing input hysteresis of semiconductor devices
Easily create arbitrary waveforms	Arbitrary waveforms can be developed with PC software. Stored waveforms can be loaded via the front USB port or imported via the complementary HME Explorer software (available for download)

R&S®SMC100A Signal Generator

A generator for every environment – with the smallest size and best price/performance ratio

- ▶ Outstanding RF performance
- ▶ Graphical user interface
- ▶ 3 year calibration cycle
- ▶ USB, Ethernet and IEEE-488 (GPIB) connectivity
- ▶ Small footprint, lightweight and power-efficient

Model overview

Model (frequency range)	Configuration	Output power	Phase noise	Analog modulation
R&S®SMC100A (9 kHz to 1.1 GHz)	R&S®SMC100A + R&S®SMC-B101 RF path option	> +13 dBm	up to -105 dBc	AM, FM, phase, pulse
R&S®SMC100A (9 kHz to 3.2 GHz)	R&S®SMC100A + R&S®SMC-B103 RF path option	> +13 dBm	up to -105 dBc	AM, FM, phase, pulse

Important facts

Specification	R&S®SMC100A	Why this is important
Signal creation	user workflow based	GUI follows the functional blocks of a transmitter, which is the device the generator is standing in for. This greatly simplifies and speeds up the setup of complex signals.
Performance	-105 dBc (spec.), typ. -111 dBc phase noise at 1 GHz	A generator with lower phase noise will add less unwanted noise to the DUT. This will show the true performance of the DUT. Test the device, not the generator.
	0.9 dBm amplitude error	Have confidence that you are applying the correct input power to your device.
	+17.5 dB output power	Output power: A higher power level allows a wider range of testing. In addition extra power enables compensation for fixtures and cables between the generator and the test point and removes the need for external amplifiers.
	typ. 5 ms, typ. 2 ms switching speed	Users typically step a source through hundreds or thousands of test frequencies. A faster switching speed has a dramatic effect on the ability to run tests quickly.
Calibration cycle	3 years	A longer calibration cycle reduces total cost of ownership.
Connectivity	USB, Ethernet, IEEE-488 (GPIB)	Integrate into current test setup without having to alter your connectivity interface.
Dimensions (W × H × D)	236 mm × 112 mm × 368 mm	A smaller footprint takes up less space on a crowded workbench.
Weight	3.9 kg	Low power consumption is important for test rack applications due to total consumption, and for bench use due to the heat generated. It also contributes to a quiet and cool instrument in the user environment.
Power consumption	45 W	

Scope of delivery

Video

Perfect for signal quality, perfect for output power, perfect for use

The R&S®SMB100B RF signal generator is all about performance and versatility in a small footprint. Outstanding spectral purity and very high output power combined with comprehensive functionality and very simple operation are some of the impressive features of the R&S®SMB100B.

Model overview

Model (frequency range)	Configuration	Max. output power (10 MHz < f ≤ 6 GHz)	Phase noise (1 GHz, at 20 kHz)	Optional analog modulation
1 GHz				
R&S®SMB100B	R&S®SMB100B, R&S®SMBB-B101	+18 dBm	< -132 dBc	AM, FM, phase, pulse
R&S®SMB100B (ultra high output power)	R&S®SMB100B, R&S®SMBB-B101, R&S®SMBB-K31, R&S®SMBB-B32	> 26 dBm	< -132 dBc	AM, FM, phase, pulse
3 GHz				
R&S®SMB100B	R&S®SMB100B, R&S®SMBB-B103	+18 dBm	< -132 dBc	AM, FM, phase, pulse
R&S®SMB100B (ultra high output power)	R&S®SMB100B, R&S®SMBB-B103, R&S®SMBB-K31, R&S®SMBB-B32	> 26 dBm	< -132 dBc	AM, FM, phase, pulse
6 GHz				
R&S®SMB100B	R&S®SMB100B, R&S®SMBB-B106	+18 dBm	< -132 dBc	AM, FM, phase, pulse
R&S®SMB100B (ultra high output power)	R&S®SMB100B, R&S®SMBB-B106, R&S®SMBB-K31, R&S®SMBB-B32	> 26 dBm	< -132 dBc	AM, FM, phase, pulse

Important facts

Specification	R&S®SMB100B	Why this is important
Frequency range	8 kHz to 1/3/6 GHz	To cover the frequency range of the DUT.
Phase noise (f = 1 GHz, 20 kHz offset)	< -126 dBc	A generator with lower phase noise will add less unwanted noise to the DUT. This shows the true performance of the DUT. Test the device, not the generator.
Output power at 6 GHz	+18 dBm	A higher power level allows a wider range of testing. In addition, extra power enables the user to compensate for fixtures and cables between the generator and the test point, and removes the need for external amplifiers.
Dimensions (W × H × D)	344 mm × 108 mm × 372 mm	A smaller footprint takes up less space on a crowded workbench.
Weight	≤ 6.8 kg	

Scope of delivery

- ▶ Quick start guide
- ▶ Power cord
- ▶ 3 year warranty

Recommended options/accessories

Reference oscillator options	Type
OCXO reference oscillator ¹⁾	R&S®SMBB-B1
OCXO reference oscillator, high performance ¹⁾	R&S®SMBB-B1H
High performance pulse modulator	R&S®SMB-K22
Pulse generator	R&S®SMB-K23
Pulse train	R&S®SMB-K27

¹⁾ Only the R&S®SMBB-B1 or the R&S®SMBB-B1H option can be installed.

The perfect choice for

Local oscillator substitution for design and test engineers

Receiver sensitivity testing for design and test engineers

FM receiver testing

Pulsed signals in aerospace and defense applications to test radar systems

Your benefit	Features
No need for external amplifiers	Ultra high output power (34 dBm, 1 GHz, meas.)
User-configurable pulse scenarios	Pulse train option in combination with the pulse modulator and pulse generator option
Quickly and correctly create remote control programs	The instrument's built-in SCPI macro recorder with code generator can automatically record all manual settings and create an executable MATLAB® script.
Compensation of external frequency responses	The R&S®SMB100B provides a user correction (UCOR) function for this purpose.
Replace your legacy signal generator	R&S®LegacyPro enables the R&S®SMB100B to reliably emulate a wide range of legacy generators from vendors such as Keysight, Agilent, HP, Anritsu and Rohde&Schwarz

Signal generators

Perfect for signal quality

Single-sideband phase noise (1 GHz, 1 Hz bandwidth, measured): Thanks to its innovative synthesizer design, the R&S®SMB100B has very low SSB phase and wideband noise and excellent suppression of nonharmonic signal components.

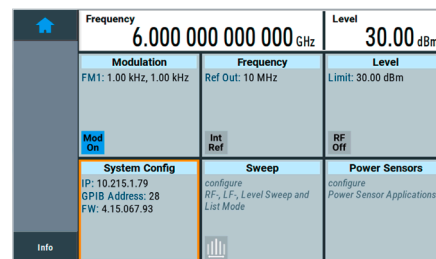

Perfect for output power

Measured maximum output power for the base unit, with the high power option (R&S®SMBB-K31) and with the additional ultra high power option (R&S®SMBB-B32). The R&S®SMB100B provides very high output power, no external amplifier is required downstream. This simplifies the test setup and results in high absolute level accuracy.

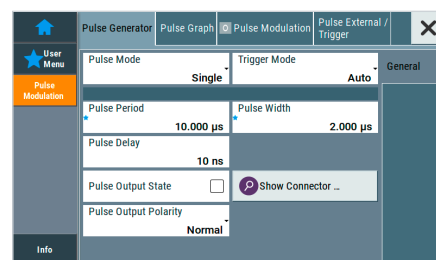

Perfect for use

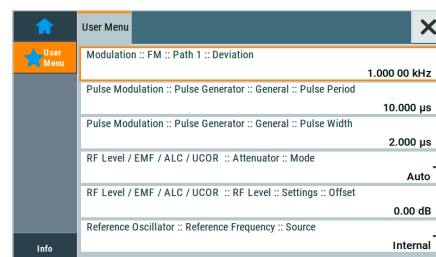

The R&S®SMB100B has a user-friendly high-resolution touchscreen interface which is fast and simple to operate.

Main screen with all important parameters and information

R&S®SMA100B RF and Microwave Signal Generator

Purest of all signals

Generating high-quality RF and microwave signals has always involved trade-offs. You could never push the performance boundaries in all directions at the same time. Until now. The R&S®SMA100B high-performance analog signal generator solves this problem. Cleanest signals, highest power levels, lowest harmonics, all at the same time from the same generator. Performance leadership without compromise.

Model overview

Model (frequency range)	Configuration	Max. output power (10 MHz $f \le 6\text{ GHz}$)	Phase noise (1 GHz, at 20 kHz)	Optional analog modulation
3 GHz				
R&S®SMA100B (base configuration)	R&S®SMA100B, R&S®SMAB-B103, R&S®SMAB-B92	+19 dBm	typ. -139 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra low phase noise)	R&S®SMA100B, R&S®SMAB-B103, R&S®SMAB-B92, R&S®SMAB-B711	+19 dBm	typ. -152 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra high output power)	R&S®SMA100B, R&S®SMAB-B103, R&S®SMAB-B92, R&S®SMAB-K31, R&S®SMAB-B32	+19 dBm	typ. -139 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra high output power and ultra low phase noise)	R&S®SMA100B, R&S®SMAB-B103, R&S®SMAB-B92, R&S®SMAB-K31, R&S®SMAB-B32, R&S®SMAB-B711	> +30 dBm	typ. -152 dBc	AM, FM, phase, pulse
6 GHz				
R&S®SMA100B base configuration)	R&S®SMA100B, R&S®SMAB-B106, R&S®SMAB-B92	+19 dBm	typ. -139 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra low phase noise)	R&S®SMA100B, R&S®SMAB-B106, R&S®SMAB-B92, R&S®SMAB-B711	+19 dBm	typ. -152 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra high output power)	R&S®SMA100B, R&S®SMAB-B106, R&S®SMAB-B92, R&S®SMAB-K31, R&S®SMAB-B32	> +30 dBm	typ. -139 dBc	AM, FM, phase, pulse
R&S®SMA100B (ultra high output power and ultra low phase noise)	R&S®SMA100B, R&S®SMAB-B106, R&S®SMAB-B92, R&S®SMAB-K31, R&S®SMAB-B32, R&S®SMAB-B711	> +30 dBm	typ. -152 dBc	AM, FM, phase, pulse

Important facts

Specification	R&S®	Why this is important
Phase noise	at 1 GHz at 20 kHz offset: ▶ standard: -135 dBc, typ. -139 dBc ▶ R&S®SMAB-B711 option: -147 dBc, typ. -152 dBc	A generator with lower phase noise will add less unwanted noise to the DUT. This shows the true performance of the DUT. Test the device, not the generator.
Output power	▶ standard: up to 6 GHz: +19 dBm (spec.) ▶ options: - R&S®SMAB-K31, up to 6 GHz: +25 dBm (spec.) - R&S®SMAB-B32, up to 6 GHz: +30 dBm (spec.)	A higher power level allows a wider range of testing. In addition, extra power enables the user to compensate for fixtures and cables between the generator and the test point, and removes the need for external amplifiers.

Scope of delivery

- ▶ Quick start guide
- ▶ Power cord
- ▶ 3 year warranty

Recommended options/accessories

Designation	Type
2 HU with 5" touch display	R&S®SMAB-B92
3 HU with 7" touch display	R&S®SMAB-B93
High performance OCXO reference oscillator	R&S®SMAB-B1H
Improved close-in phase noise performance (3 GHz model)	R&S®SMAB-B710N
Improved close-in phase noise performance (6 GHz model)	R&S®SMAB-B710

The perfect choice for

Local oscillator substitution for design and test engineers

Receiver sensitivity testing for design and test engineers

AM/FM/phase modulation

Digital designers needing the ultimate in precision for a low jitter clock

Your benefit

Performance leadership without compromise

Unmatched signal quality delivers better results

Unique application-specific capabilities

Features

- ▶ Lowest phase noise performance
- ▶ Highest output power
- ▶ Lowest harmonics
- ▶ All at the same time with no trade-offs, allowing the R&S®SMA100B to deliver the cleanest signals at the highest power levels

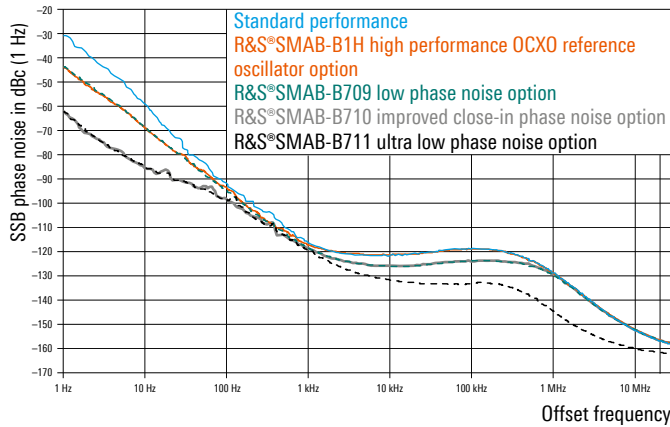

- ▶ Highest output power – over 30 dBm up to 6 GHz
- ▶ Outstanding phase noise for all frequency ranges

- ▶ Pulse modulation (short pulses, pulse train scenarios)
- ▶ Sophisticated clock synthesizer for high-end ADC and DAC component tests

Ultra low phase noise

Measured SSB phase noise at $f = 10$ GHz, standard performance versus the R&S®SMAB-B1H, R&S®SMAB-B709, R&S®SMAB-B710 and R&S®SMAB-B711 options.

The quality of the test signal always impacts the quality of your results. With industry-leading phase noise performance in all areas (close-in, pedestal and wideband noise), the R&S®SMA100B delivers the purest signals, ensuring that you test the DUT and not the signal generator.

Accurate narrow pulsed CW signals

Amplitude flatness, accuracy and high on/off ratios are critical when producing pulsed CW signals. The R&S®SMA100B can achieve an on/off ratio of around 100 dB, while utilizing closed-loop level control to produce exceptionally flat and accurate pulses as narrow as 100 ns. To supplement this critical RF performance, an internal pulse generator and pulse train option make it possible to create more complex test cases without having to add external equipment with elaborate triggering setups.

Ultra high output power and lowest harmonics

Measured maximum available output power in the frequency ranges from 8 kHz to 6 GHz and 8 kHz to 20 GHz – for the base unit, with the high power option, and with the ultra high power option.

With the highest output power available from any signal generator, the R&S®SMA100B eliminates the need for external amplifiers, reducing the complexity of the test setup by removing these expensive uncalibrated components.

Traditionally, high power signals also have significant harmonic components, usually only around 35 dB below the carrier. The R&S®SMA100B changes this. Trade-offs are unnecessary. You get the highest power and the lowest harmonics (< -70 dBc (meas.), X-band, +18 dBm), ensuring that you test with the purest signals.

HANDHELD ANALYZERS

Frequency range

The frequency range specifies the range of frequencies over which the spectrum analyzer will operate. Different measurement applications may require a larger frequency range to evaluate harmonics, spurs or alternate channels. In this case, it makes sense to consider a higher frequency model in order to capture all potential signals of interest.

Application example: Detecting the third-order harmonics of a 915 MHz signal requires a spectrum analyzer of more than 2.745 GHz maximum frequency.

Upgradeability

All handheld analyzers have various upgrade options. The analyzer's capability can be increased to meet the task's requirements. Some models even offer frequency upgrades without having to add hardware. All upgrades are done via keycode, which eliminates the need to send the analyzer to a Rohde & Schwarz service center – no downtime.

A simple upgrade can transform a basic analyzer into a multitasking analyzer. If the function is only needed temporarily, a temporary license is also available.

Features and capabilities

Handheld analyzers provide a wide range of features and options to support different tasks in the field. Supported measurements include:

- ▶ Advanced spectrum measurements, e.g. channel power, occupied bandwidth, harmonic distortion
- ▶ Cable and antenna measurements, e.g. distance-to-fault, cable loss, VSWR
- ▶ Signal demodulation, e.g. AM/FM/PM demodulation and demodulation in line with specific wireless or mobile standards
- ▶ Vector signal analysis
- ▶ Spectrum monitoring and interference hunting

Some of the measurements require additional equipment, for example an antenna with the corresponding frequency range, a GPS receiver for position logging and a calibration kit to eliminate the influence of adapters.

Operating duration

To facilitate measurements anytime, anywhere, handheld analyzers must be mobile. All handheld analyzers are battery operated. Depending on the task, measurements can take a few minutes or even a day. Typically, a battery can last 3 to 4.5 hours. Thanks to state-of-the-art design concepts, the newer handheld analyzer generation consumes considerably less power. Battery operating time for these analyzers is doubled. With a single charge, it is now possible to complete a full day's work in the field without having to take along an extra battery or look for a power source.

For longer operating periods (for example when a handheld spectrum analyzer is installed at a remote location for a week to perform spectrum recording), simply take out the battery and use a power adapter. If there is a power outage, the analyzer will automatically power up when AC power returns. There is no need to send someone to the site to power up the analyzer.

Learn about interference hunting in smart factories using the R&S®Spectrum Rider FPH

R&S®Spectrum Rider FPH Handheld Spectrum Analyzer

The three key Ps for lab and field environments

Performance – excellent DANL and phase noise

- ▶ Weak signals can be easily captured

Portability – weighs only 2.5 kg

- ▶ Carrying holster (R&S®HA-Z322) to free up hands
- ▶ Side strap included for easy transportation
- ▶ Selection of carrying cases available

Price – low starting price and optional software keycode upgrades

- ▶ Competitive and attractive price
- ▶ No downtime, no recalibration needed

Model overview

Model (frequency range)	Preamplifier	Resolution bandwidth	Phase noise	Level measurement uncertainty	DANL	TOI
R&S®FPH (5 kHz to 2 GHz)	optional	1 Hz to 3 MHz	-88 dBc (1 Hz), typ. -95 dBc (1 Hz)	up to 1.25 dB, typ. 0.5 dB	-158 dBm, typ. -163 dBm	typ. +10 dBm
R&S®FPH (5 kHz to 3 GHz)						
R&S®FPH-P5 (5 kHz to 4 GHz)						
R&S®FPH (5 kHz to 6 GHz)						
R&S®FPH (5 kHz to 8 GHz)						
R&S®FPH (5 kHz to 13.6 GHz)						
R&S®FPH (5 kHz to 20 GHz)						
R&S®FPH (5 kHz to 26.5 GHz)						
R&S®FPH (5 kHz to 31 GHz)					-158 dBm, typ. -162 dBm	

Important facts

Specification	R&S®Spectrum Rider FPH	Why this is important
Software upgradeable frequency ranges	•	Investment protection. Allows users to buy only what they need, when they need it.
Touchscreen (capacitive)	•	Allows faster measurement setup and configuration. Ability to pinch and zoom to set span.
Backlit keypad	•	Ability to use the equipment in all lighting conditions.
Fanless design	•	Quiet operation, sealed to protect against dust and water.

Scope of delivery

- ▶ Lithium-ion battery pack
- ▶ Side strap for your hand
- ▶ Power cord
- ▶ USB cable
- ▶ User manual
- ▶ 3 year warranty (one year for battery and accessories)

Recommended options/accessories

Description	Type
Power sensor support	R&S®FPH-K9
Channel power meter	R&S®FPH-K19
Pulse measurements with power sensor	R&S®FPH-K29
Interference analysis	R&S®FPH-K15
Signal strength mapping	R&S®FPH-K16

The perfect choice for

Spectrum clearance (5G ready)	Interference hunting
Pulse measurement	EMI debugging and RF design validation

Your benefit	Features
Battery life twice that of today's handheld spectrum analyzers	> 6 h battery life
Smartphone style capacitive touchscreen; also available with traditional interface	<ul style="list-style-type: none"> ▶ 7" antiglare capacitive color touchscreen ▶ On-screen keyboard ▶ Smartphone-like gestures ▶ Adjustable display brightness ▶ Backlit large button keypad ▶ Multifunction rotary knob
Buy only what you need; upgrade later without returning analyzer for servicing	<ul style="list-style-type: none"> ▶ Selection of 2/6/13.6/26.5 GHz base models ▶ Frequency upgrade keycode options available for each base model ▶ Channel power meter keycode option

Operation time

The analyzer has an innovate fanless concept – part of a rugged design that protects it from dust and water. Designed with power optimization in mind, the R&S®Spectrum Rider FPH consumes less power than competitor products and can be operated for a full working day without recharging.

Price comparison

The R&S®Spectrum Rider FPH is a high-quality spectrum analyzer. Its favorable price tag lowers the entry barrier for prospective premium analyzer owners. The unique frequency upgrade concept and software keycode options make it easy to upgrade the instrument.

Lightweight design

Every additional gram adds to user fatigue in the field. Thanks to the state-of-the-art design, each unit weighs only 2.5 kg – regardless of the frequency range.

Performance and features

The R&S®Spectrum Rider FPH has exceptional phase noise and DANL to capture known and unknown signals. The R&S®Spectrum Rider FPH easily measures a wide range of parameters such as total harmonic distortion, occupied bandwidth, output power and channel power, making it the ideal tool for field work.

Other products to consider

- ▶ R&S®NRP power sensors – all models up to 110 GHz supported
- ▶ R&S®FSH – when you need digital modulation analysis

R&S®CableRider ZPH Cable and Antenna Analyzer

Save time in the field

The R&S®CableRider ZPH is a cable and antenna analyzer that is available in two models. The one-port model has all the essential basic measurement capabilities required for installing and maintaining antenna systems in the field. Its unique features ensure fast and efficient cable and antenna measurements. The two-port model offers more functionality and can perform spectrum analysis (R&S®ZPH-K1 option). It has an independent tracking source plus an integrated bias tee. All these add-ons make the R&S®CableRider ZPH the perfect field installation and maintenance tool.

Model overview						
Model	Frequency range	Frequency extension	Measurement speed	Data points	Measurement mode (standard)	Measurement mode (optional)
R&S®ZPH one-port model (model .02)	2 MHz to 3 GHz				DTF, return loss, VSWR, one-port cable loss, Smith chart, phase	power meter, power measurement with power sensor, pulse measurement
R&S®ZPH two-port model (model .12)	<ul style="list-style-type: none"> CAT mode: 2 MHz to 3 GHz spectrum mode: 5 kHz to 3 GHz 	up to 4 GHz (R&S®ZPH-B4 option)	0.3 ms/point	101 to 2501	DTF, return loss, VSWR, one-port cable loss, Smith chart, phase, S ₂₁	power meter, power measurement with power sensor, pulse measurement, spectrum analysis, interference analysis, AM/FM/ASK/FSK modulation analysis

Important facts		
Specification	R&S®ZPH	Why this is important
Measurement speed	0.3 ms/point	Total overall test time is an important parameter impacted greatly by measurement speed. Faster measurement time per point increases overall throughput. This is especially important if hand-tuning of devices (antennas, resonators) is required.
Battery operation time	up to 6.5 h/9 h (mode dependent)	The advantages of having a long-lasting battery are obvious – no need to bring an extra battery with additional weight when climbing up a mast or tower, no dead batteries during measurement.
Automatic calibration unit	• ¹⁾	With little or no VNA experience, users can make a valid calibration and accurate measurements. An auto-cal unit also eliminates the need to deal with individual open, short, match and through calibration standards. Auto-cal based calibrations can be performed in the field or the lab to ensure consistent and reliable results.
Capacitive touchscreen with gesture support	•	Intuitive (smartphone-like) operation. Allows faster measurement setup and configuration. Ability to pinch and zoom to set span.

¹⁾ With R&S®ZN-Z103 calibration unit.

Remote wireless control apps

Tablet with R&S®MobileView apps (available for Android and iOS) to remotely control the analyzer.

Wizard function: Fast and accurate measurements in three simple steps

SPECTRUM ANALYZERS

Frequency range

The frequency range specifies the range of frequencies over which the spectrum analyzer will operate. Different measurement applications may require a larger frequency range to evaluate harmonics, spurs or alternate channels. In this case, it makes sense to consider a higher frequency model in order to capture all potential signals of interest.

Application example: Detecting the third-order harmonics of a 915 MHz signal requires a spectrum analyzer with a maximum frequency greater than 2.745 GHz.

Dynamic range

The dynamic range is the analyzer's ability to detect weak signals in the presence of strong signals. The dynamic range is limited on the lower end by the analyzer's inherent noise and spurs and on the upper end by nonlinearities. The inherent noise is specified by the displayed average noise level (DANL), given in dBm and normalized to 1 Hz resolution bandwidth.

The nonlinearities are given by the 1 dB compression point, second harmonic distortion and third-order intercept (TOI).

A preamplifier reduces the DANL, which helps detect weak signals but increases other distortions and reduces the overall dynamic range.

An input attenuator with a small step size helps use the maximum dynamic range.

Application example: Spurious emission measurements, EMI debugging. To detect a weak signal of -100 dBm with a resolution bandwidth of 10 kHz and a signal to noise ratio (SNR) of 10 dB, the DANL must be below -110 dBm/10 kHz, which is equivalent to -150 dBm (1 Hz).

Features and capabilities

Modern spectrum analyzers provide a wide range of options for enhanced signal analysis and ease of use. Possible firm-ware or software options include:

- ▶ Advanced spectrum measurements, e.g. spectrogram, channel power, occupied bandwidth, third-order intercept point
- ▶ I/Q analysis mode with a specific analysis bandwidth for capturing and analyzing signals, including phase information
- ▶ Software for signal demodulation, e.g. AM/FM/PM demodulation, vector signal analysis, signal demodulation in line with specific wireless or mobile standards
- ▶ Certain use cases and measurements require dedicated hardware. Possible hardware options include:
 - Battery operation or 12 V/24 V DC power for portable or vehicular operation
 - Tracking generator for scalar network analysis
 - 28 V DC output for noise figure measurements with a noise source
 - Remote control requires a IEEE-488 (GPIB), LAN or WLAN interface

Application example: Amplitude transmission measurements on an RF filter require a tracking generator.

Phase noise

The spectrum analyzer's inherent phase noise limits measurements very close to a carrier since spurs at e.g. 1 kHz offset may be hidden in the analyzer's phase noise. The inherent phase noise also limits the ability to perform phase noise measurements on the signal source and it impacts error vector magnitude (EVM) measurements on digitally modulated signals, especially narrowband signals.

Application example: To detect a spur at a certain frequency offset at 70 dB below the carrier with a 10 dB SNR and 10 Hz RBW, the SSB phase noise must be below -90 dBc (1 Hz).

R&S®FPC Spectrum Analyzer

The value of three instruments in one

Signal generator

The R&S®FPC not only features standard tracking generator measurements with frequency offset functionality, its signal source is independent to enable signal generator functionality. A CW signal can be set within the frequency range, or in a coupled mode to follow the center frequency setting of the spectrum analyzer mode.

Spectrum analyzer

The R&S®FPC base instrument has a frequency range from 5 kHz to 1 GHz with keycode options to unlock up to 3 GHz and other features. Engineered in Germany, it provides the best dynamic range in its class. In combination with RBW settings down to 1 Hz, it resolves the finest details, which are displayed on the high-resolution 10.1" WXGA display. Wired or wireless remote control options are available for free.

Network analyzer

The R&S®FPC features an internal VSWR bridge that makes purchasing and mounting/dismounting an external bridge unnecessary. S_{11} reflection measurements are supported, including Smith chart and DTF features.

Model overview

Model (frequency range)	Preamplifier included	Independent signal generator	Tracking generator	Resolution bandwidth	Phase noise	DANL	TOI
R&S®FPC1000 (5 kHz to 1 GHz)	optional	-	-	1 Hz to 3 MHz	< -103 dBc (1 Hz) (f = 500 MHz at 100 kHz offset)	down to typ. -165 dBm (with preamplifier)	+7 dBm
R&S®FPC1000 (5 kHz to 2 GHz, frequency upgrade)							
R&S®FPC1000 (5 kHz to 3 GHz, frequency upgrade)							
R&S®FPC1500 (5 kHz to 1 GHz)		•	•				
R&S®FPC1500 (5 kHz to 2 GHz, frequency upgrade)							
R&S®FPC1500 (5 kHz to 3 GHz, frequency upgrade)							

Important facts

Specification	R&S®FPC1000	R&S®FPC1500	Why this is important
DANL (normalized to 1 Hz)	typ. < -165 dBm (power amplifier = on)		Most "economy" spectrum analyzers sacrifice premium components and superior RF design choices in favor of cost reduction. True RF performance in an economy instrument gives you the confidence of the most accurate measurements within your frequency needs.
TOI	+17 dBm (attenuation = 10 dB)		
Phase noise at 100 kHz offset	typ. < -103 dBc (1 Hz)		Visualizing important signal details is not just a matter of the RF specifications; the high-resolution display of the R&S®FPC spectrum analyzers allows hardware signal details to be displayed on screen.
Display	10.1" (1366 × 768 pixel)		
Modulation analysis	spectrum analysis and modulation analysis		A wider range of both modulation and spectrum analysis allow the spectrum analyzer to pair more suitably with a larger range of applications. Modulation analysis can allow demodulation of simple modulation formats such as ASK/FSK as well as AM/FM.
Tracking generator	-	tracking generator model with the unique value of three instruments in one	A spectrum analyzer with tracking generator is most useful for scalar transmission measurements, for example on filters. The R&S®FPC1500 comes with an extra: frequency conversion measurements (enabled by the independent type source of the instrument). This is great for RF mixer characterization.

Coupled CW mode

R&S®FSC Spectrum Analyzer

Compact and cost-effective spectrum analyzer

- ▶ Performance
 - The R&S®FSC features very good RF performance. Its DANL, TOI and phase noise make it ideal for many standard measurement applications
 - General purpose spectrum analysis presets for spectral characteristics, e.g. harmonics, AM modulation depth and ACLR are included as standard
- ▶ Compact form factor:

The R&S®FSC has the smallest footprint in its class at only 3 HU, ½ 19". It takes up very little space on a bench. Two R&S®FSC analyzers or one R&S®FSC and an R&S®SMC signal generator fit in just 3 HU of rack space
- ▶ Cost-effective:

Total cost of ownership is excellent due to affordable initial and calibration costs, plus very low operating cost with only 12 W power consumption

Model overview

Model	Frequency range	Preamplifier	Resolution bandwidth	Phase noise	Level measurement uncertainty	DANL	TOI
R&S®FSC3, model .03 (base)	9 kHz to 3 GHz	optional	10 Hz to 3 MHz	–95 dBc (1 Hz), typ. –105 dBc (1 Hz)	up to 1 dB, typ. 0.5 dB	–161 dBm, typ. –165 dBm	> +10 dBm, typ. +15 dBm
R&S®FSC3, model .13 (tracking gen.)	9 kHz to 3 GHz				up to 1.5 dB, typ. 0.5 dB	–161 dBm, typ. –165 dBm	> +10 dBm, typ. +15 dBm
R&S®FSC6, model .06 (base)	9 kHz to 6 GHz				up to 1.5 dB, typ. 0.5 dB	–155 dBm, typ. –159 dBm	> +3 dBm, typ. +10 dBm
R&S®FSC6, model .16 (tracking generator)	9 kHz to 6 GHz				up to 1.5 dB, typ. 1 dB	–155 dBm, typ. –159 dBm	> +3 dBm, typ. +10 dBm

Important facts

Specification	R&S®FSC	Why this is important
Tracking generator dynamic range	typ. 90 dB	Provides higher dynamic range when performing filter measurements.
Phase noise		
30 kHz	up to –95 dBc (1 Hz)	Lower phase noise enables greater signal detection accuracy close to the carrier.
100 kHz	up to –100 dBc (1 Hz)	
1 MHz	up to –120 dBc (1 Hz)	

Recommended options/accessories

Description	Type
Preamplifier for spectrum analyzer	R&S®FSC-B22
19" rackmount kit for two R&S®FSC	R&S®ZZA-T33
19" rackmount kit for one R&S®FSC	R&S®ZZA-T34
Headphones	R&S®FSH-Z36
Near-field probes, 30 MHz to 3 GHz	R&S®HZ-15
Preamplifier for R&S®HZ-15, 100 kHz to 3 GHz	R&S®HZ-16

The perfect choice for	
R&D service labs	Test automation
Professionals, hobbyists	Education and training

Your benefit	Features
Easy to set up	Owing to its compact design, the R&S®FPC only takes up minimal bench space
Easy to operate	All important settings are available via proper hardkeys, supplemented by softkeys at the bottom of the display
Wide choice	4 base models to fit customer needs

Highlights

Class-leading spectrum analyzer engineered in Germany.

- ✓ High RF performance
- ✓ Low power consumption
- ✓ Low noise floor
- ✓ Compact form factor
- ✓ High max. input power
- ✓ Easy to control

Tracking generator for scalar transmission measurements

Spectrum analyzers

Easy virtual control¹⁾ – control it your way, be it wired or wirelessly

Wireless remote control with R&S®MobileView app

Wired/wireless remote control with R&S®InstrumentView PC software

Flexible remote control on demand, anywhere, anytime.

¹⁾ Via a wireless router connected to the instrument's LAN port.

R&S®FSL Spectrum Analyzer

Signal analysis functions in a lightweight, compact package

The R&S®FSL is an extremely lightweight and compact spectrum analyzer. Its low weight and optional battery/DC power make it the ideal instrument for the lab and in the field.

The R&S®FSL features many measurement options for analyzing signals in line with common standards. With an optional tracking generator, scalar network analysis up to 18 GHz is possible.

Model overview

Model	Frequency range	Tracking generator	Resolution bandwidth	Phase noise	DANL	TOI
R&S®FSL18, model .18 (base)	9 kHz to 18 GHz	–	300 Hz to 10 MHz (–3 dB) in 1/3 sequence			
R&S®FSL18, model .28 (tracking generator)	9 kHz to 18 GHz	•	10 Hz to 10 MHz (–3 dB) in 1/3 sequence (optional), 20 MHz additionally in zero span	–98 dBc (1 Hz), typ. –105 dBc (1 Hz), f = 500 MHz	–162 dBm (1 Hz), f = 500 MHz, typical, preamplifier on	typ. +18 dBm

Important facts

Specification	R&S®FSL	Why this is important
Frequency range	9 kHz to 18 GHz	Higher frequency range allows users to view signals within their application area. Having portable instruments at higher frequencies allows expanded measurements in the field.
Resolution bandwidth	1 Hz to 20 MHz	Wider resolution bandwidths offer more measurement versatility for applications such as pulse analysis in zero span.
Portable/battery power	•	Can be used in the lab and in the field with optional battery or DC power option.
Tracking generator	•, up to 18 GHz	A tracking generator allows access to a signal source coincident with the sweep frequency of the spectrum analyzer. This can be used for characterization of cables and filters up to microwave frequencies.

Use as a power meter: Turn the R&S®FSL into a power meter with R&S®NRP power sensors and the R&S®FSL-K9 option

The perfect choice for	
Research, education	Portable measurements in the field
Fast and easy integration into automated tests	Wireless communications standard signal analysis ¹⁾

¹⁾ Please see data sheet for supported standards.

Highlights

Class-leading spectrum analyzer engineered in Germany.

	Portability		18 GHz tracking generator
	Low noise floor		1 Hz resolution bandwidth

Your benefit	Features
One instrument for multiple tasks	<ul style="list-style-type: none"> ▶ Spectrum analysis ▶ Power meter ▶ Analog and digital signal analysis ▶ Scalar network analysis
Can take it with you everywhere	<ul style="list-style-type: none"> ▶ Carrying handle and low weight ▶ Optional battery pack ▶ Optional 12 V/24 V DC power supply
Signal analysis functions	Many measurement options for analyzing signals in line with IEEE (WLAN, WiMAX™ and Bluetooth®) and 3GPP standards ¹⁾

Recommended options/accessories	
Description	Type

Noise figure and gain measurements	R&S®FSL-K30

Scalar network analysis²⁾: With the optional tracking generator, users can quickly and easily measure frequency response, filters and attenuation. The “n dB down” marker determines the 3 dB bandwidth of a bandpass filter at the press of a button.

²⁾ For reflection measurement, an external VSWR bridge is required.

The screenshot shows the 'Measurement Modes' menu. The 'Spectrum Analyzer' mode is selected. Other available modes include: Analog Demod, Bluetooth, Cable TV Analyzer, Noise, 3G FDD BTS, WiMAX, and WLAN.

Many predefined measurements: The R&S®FSL offers many different firmware options. The user can switch between different applications.

Spectrum analyzers

R&S®FPL1000 Spectrum Analyzer

Brochure

Data sheet

Fact sheet

Video

Easy to carry with benchtop performance

The R&S®FPL1000 spectrum analyzer combines excellent RF performance with a small footprint. The light weight and optional battery/DC power make it the ideal instrument for the lab and in the field.

Operating the multi-touchscreen instrument is intuitive and fun to use. The R&S®FPL1000 supports multiple tasks in one instrument at an attractive price.

Model overview

Model	Frequency range	DANL at 1 GHz	Phase noise at 1 GHz (10 kHz offset)	TOI at 1 GHz	Spurious	Battery operation
R&S®FPL1003	5 kHz to 3 GHz	preamplifier off: < -149 dBm (typ. -152 dBm)	typ. -105 dBc (1 Hz)	+20 dBm (typ.)	< -70 dBc (typ.)	optional
R&S®FPL1007	5 kHz to 7.5 GHz	preamplifier on: < -163 dBm (typ. -167 dBm)				

Important facts

Specification	R&S®FPL1000	Why this is important
Analysis bandwidth	▶ 10 MHz standard ▶ 40 MHz optional	Digital demodulation possible within the analysis bandwidth.
Spurious	< -70 dBc	Unambiguous detection of small signals.
Phase noise at 1 GHz (10 kHz offset)	< -105 dBc (1 Hz)	Analysis close to the carrier or of narrowband signals.
TOI at 1 GHz	> 17 dBm	Higher dynamic range to detect small signals in the presence of strong ones.
Dimensions (W x H x D)	408 mm x 186 mm x 235 mm	Smaller dimensions leave more space on the workbench and make it easier to integrate into a rack.
Weight	6 kg	Low weight for enhanced portability.
Battery operation	optional	Full portability.

in R&D

Your benefit	Features
One instrument for multiple tasks	<ul style="list-style-type: none"> ▶ Spectrum analysis ▶ Power meter ▶ Analog and digital signal analysis
More space on your test bench	▶ Smallest footprint in its class (depth of only 23.5 cm)
Take it with you everywhere	<ul style="list-style-type: none"> ▶ Top handle and low weight ▶ Optional battery pack, over 3 hours operation ▶ Optional 12 V/24 V DC power supply

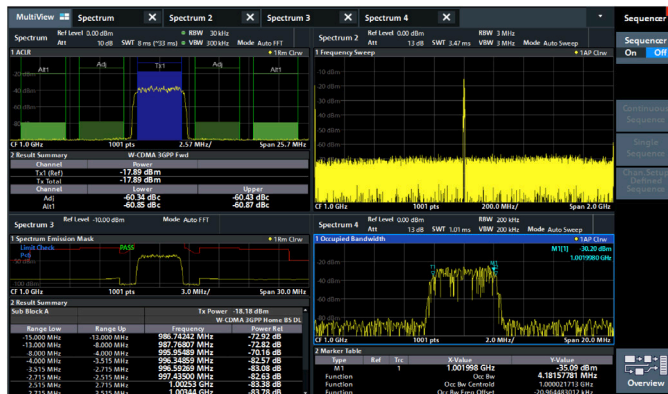

Up to 40% more space on your desk

The R&S®FPL1000 leaves up to 40% more space on a typical 80 cm workbench than comparable analyzers. With 60% less weight than comparable analyzers, it is the most portable benchtop analyzer.

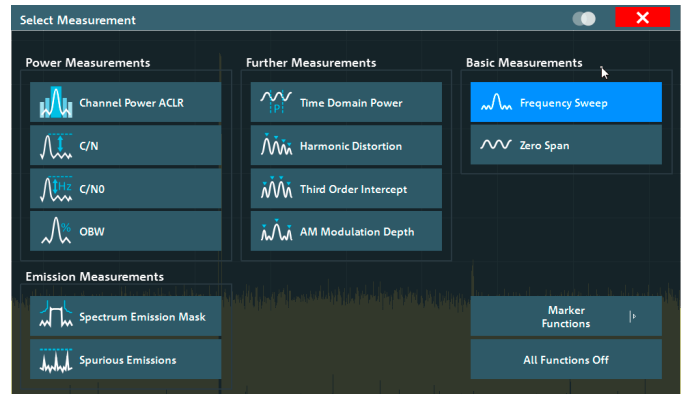

Use as a power meter: Turn the R&S®FPL1000 into a power meter with R&S®NRP power sensors and the R&S®FPL1-K9 option

Spectrum analyzers

Flexible user interface: Configure your result windows the way you want. Display different measurement channels at once. Sequential channel updating allows parallel measurement of e.g. spectrum, spectrogram, I/Q analysis and analog demodulation.

Many predefined measurements: Fast and easy access to a wealth of measurement and marker functions in the base model, including spectrogram measurements and I/Q analysis. Quick configuration through clear menus and touchscreen operation.

VECTOR NETWORK ANALYZERS

Frequency range

The frequency range of a VNA is defined as its maximum settable frequency values. This is important as it needs to cover the frequency range of the DUT.

Sometimes a value for overrange is given, which allows a wider frequency range than officially specified. The measurement can be configured, but the operator must be aware that there is no performance data specified for the overrange and there might not be a matching calibration kit.

Rule of thumb: The frequency range of a VNA has to match the DUT's requirements.

Dynamic range

A high dynamic range is essential for measuring high blocking filters and large attenuators. The dynamic range is defined as the difference between the max. source power and the noise floor of the instrument. For the specification of the dynamic range, typically a noise floor at 10 Hz IF bandwidth (IFBW) is used. Since many engineers want to measure fast, they increase the IF bandwidth. But be aware that an increased IF bandwidth means a reduced dynamic range. If the IF bandwidth is increased by a factor of 10, the dynamic range is reduced by 10 dB.

Rule of thumb: For accurate measurements, the signal to noise ratio (SNR) needs to be considered and should be at least 20 dB.

Measurement speed

The measurement speed tells you how fast a measurement can be performed. This is especially critical for production environments, but is also interesting in a laboratory environment.

In general, the measurement speed is mainly determined by the number of measurement points, the measurement bandwidth, whether a calibration is active and what type of calibration is used.

If you have a low number of points, a high IF bandwidth and no calibration is active, the total sweep time can be in the range of ms.

But if you have a measurement setup with many channels and traces, a high number of measurement points, a small IF bandwidth and an active calibration, the total test time can take several minutes.

Rule of thumb: One quick way to decrease the test time for one channel with one trace is to increase the IF bandwidth or reduce the number of points.

Approx. $t_{Test} \approx \text{number of points} / \text{IFBW}$

Passive and active components

The type of DUT that needs to be measured is important when choosing a VNA, as is its RF performance and test functions.

If passive components such as filters, cables and attenuators need to be measured, the VNA only needs to be able to perform standard S-parameter measurements. Depending on the DUT, you might just need reflection parameters such as S11 or you might also need transmission parameters such as S21. But even for a “simple” filter with a high blocking stopband, you need a VNA with a high-end dynamic range.

If active components need to be measured, you need to analyze the required test parameters even more carefully to find the appropriate VNA. If you want to measure the compression point of an amplifier, for example, you will need to be able to perform a power sweep and a power calibration, which is not a standard feature in all VNAs.

Another important aspect is the requirement for balanced ports and the number of test ports. With some two-port VNAs, you can perform one-port balanced reflection measurements. If you have more balanced ports, you will need more than two ports on your VNA.

R&S®ZNLE Vector Network Analyzer

Measurements as easy as ABC

With the R&S®ZNLE, vector network analysis measurements become as easy as ABC: easy to use, easy to calibrate, easy to configure.

Fast measurement speeds, reliable RF performance and a clearly structured user interface make the R&S®ZNLE the perfect choice for vector network analysis measurements on passive components.

Model overview

Model	Frequency range	Dynamic range	Output power	No. of points	IF bandwidth	Measurement speed
R&S®ZNLE3	1 MHz to 3 GHz	110 dB (spec.), typ. 120 dB	0 dBm (spec.), up to typ. +2 dBm	1 to 5001	1 Hz to 500 kHz	16.7 ms ¹⁾
R&S®ZNLE6	1 MHz to 6 GHz	110 dB (spec.), typ. 120 dB	0 dBm (spec.), up to typ. +2 dBm	1 to 5001	1 Hz to 500 kHz	16.7 ms ¹⁾

¹⁾ 401 points, 200 MHz span, 100 kHz IF bandwidth, 2-port calibration on.

Important facts

Specification	R&S®ZNLE	Why this is important
Frequency	1 MHz to 3 GHz/6 GHz	The measuring instrument has to cover the working frequency range of the DUT.
Dynamic range	110 dB (spec.), typ. 120 dB	A high dynamic range is important for measuring high-blocking filters
Output power	0 dBm	High output power is needed for measuring high-blocking filters or very long cables.
Speed	9.6 ms (100 kHz IFBW), 10 µs per point	Especially in a production environment, it is important to measure fast. Because time is money.
Display	•	Having an integrated monitor reduces hassle when using the instrument. You can just plug it in and start measuring.
External PC required	–	The R&S®ZNLE just needs to be plugged in and users can start measuring without having to configure an external PC.
Dimensions (W × H × D)	187 mm × 399 mm × 229 mm	The size of the VNA determines how much space is left on the workbench for the measurement setup. More space is an advantage.
Weight	6 kg	If the instrument has to be used in different places, it is better to have a lighter instrument.

R&S®ZN-Zx calibration units can be used with the R&S®ZNLE to conveniently and quickly perform system error correction

Scope of delivery

- ▶ Power cable
- ▶ Operating manual
- ▶ CD with manual
- ▶ 3 year warranty

Manufacturing testing

Your benefit	Features
2-in-1 instrument	The R&S®ZVL lets you add a spectrum analyzer option so you have just one box, but two instruments
75 Ω test set	The R&S®ZVL has 75 Ω connectors, which is what you need for TV/CATV measurements
Small, compact and portable	Weighing only 7 kg and being a 2-in-1 instrument, the R&S®ZVL is very compact. With the handle and battery pack, it can be carried around easily and be used even if there is no power outlet nearby

High throughput in production: Large measurement bandwidths up to 500 kHz and fast synthesizers make for short measurement times and high throughput in manual tuning and automated production sequences.

Multi-trace display for faster DUT characterization: Several traces can be combined in diagrams and assigned to different measurement channels.

Easy and intuitive operation: Context-sensitive help, including detailed description of the active function and display of the associated remote control commands, supports even untrained users and simplifies programming.

Vector network analyzers

R&S®ZNL Vector Network Analyzer

The 3-in-1 allrounder

Measurement equipment for RF applications must fulfill high quality standards. Instruments should be easy to use and offer high versatility. Fast measurements and reliable performance are crucial.

With the R&S®ZNL, Rohde & Schwarz exceeds these expectations and offers even more: Vector network analysis, spectrum analysis and power meter measurements are unified in a single, compact instrument, making the R&S®ZNL a universal allrounder.

Model overview						
Model	Frequency range	Dynamic range	Output power	No. of points	IF bandwidth	Measurement speed
R&S®ZNL3	5 kHz to 3 GHz	120 dB (spec.), typ. 130 dB	0 dBm (spec.), up to typ. +3 dBm	1 to 10001	1 Hz to 500 kHz	16.7 ms ¹⁾
R&S®ZNL6	5 kHz to 6 GHz	120 dB (spec.), typ. 130 dB	0 dBm (spec.), up to typ. +3 dBm	1 to 10001	1 Hz to 500 kHz	16.7 ms ¹⁾

¹⁾ 401 points, 200 MHz span, 100 kHz IF bandwidth, 2-port calibration on.

Important facts		
Specification	R&S®ZNL	Why this is important
Frequency	5 kHz to 3 GHz/6 GHz	The measuring instrument has to cover the working frequency range of the DUT.
Dynamic range	120 dB (spec.), typ. 130 dB	A high dynamic range is important for measuring e.g. high-blocking filters. It also makes it possible to use a larger IF filter for faster measurement speed.
Output power	0 dBm	A high output power is needed if you need to measure high-blocking filters (requires more dynamic range) or very long cables.
Speed	9.6 ms (100 kHz IFBW), 10 µs per point	Especially in a production environment, it is important to measure fast. Because time is money.
Display	•	Having an integrated monitor reduces hassle when configuring the measurement setup.

Service and
maintenance

Feature highlights

- ▶ Frequency range from 5 kHz to 3 GHz (R&S®ZNL3) or 5 kHz to 6 GHz (R&S®ZNL6)
- ▶ Two-port vector network analyzer for bidirectional measurements
- ▶ 3 instruments in 1: vector network analyzer, spectrum analyzer and power meter
- ▶ MultiView operation
- ▶ Wide dynamic range up to typ. 130 dB
- ▶ Output power: from -40 dBm to 3 dBm (typ.)
- ▶ Fast measurements, e.g. 16.7 ms at 100 kHz IF bandwidth (401 points, 200 MHz span, two-port calibration)
- ▶ Compact size and low weight (6 kg to 8 kg)
- ▶ Optional battery pack

MultiView provides a convenient overview of all active R&S®ZNL modes. The figure shows a combination of spectrum analyzer and network analyzer. In this view, all modes can be updated sequentially.

Portable for use on the go: With batteries, the R&S®ZNL can be used outside the labs. Batteries are hot-swappable

Your benefit	Features
3 instruments in 1	A full two-port VNA that can be a true spectrum analyzer (hardware option) and also supports the use of power sensors (option), turning it into a power meter
Fully portable	The R&S®ZNL is very lightweight (6 kg to 8 kg) and very compact (408 mm × 235 mm footprint) and has a top handle for easy carrying. The battery pack allows it to be used on the go
Clearly structured user interface with multitouch	Wide capacitive touchscreen for convenient configuration with multitouch gesturing. Undo/redo softkeys and fully integrated context-sensitive help menu for user-friendly operation

Compact, lightweight instrument

The R&S®ZNL saves up to 67% of desk space, leaving plenty of room for the measurement setup.

Vector network analyzers

A padded soft carrying bag for safe transportation of the R&S®ZNL

R&S®ZND Vector Network Analyzer

The analyzer that grows with your requirements

The R&S®ZND is a base network analyzer that provides unidirectional measurements up to 4.5 GHz. Options are available to perform bidirectional measurements and to extend the frequency range to 8.5 GHz.

Model overview

Model	Frequency range	Dynamic range	Max. output power	No. of points	IF bandwidth	Measurement speed
R&S®ZND	100 kHz to 4.5 GHz	<ul style="list-style-type: none"> ▶ up to 120 dB (spec.) ▶ up to typ. 130 dB 	+3 dBm (spec.)	2 to 5001	1 Hz to 300 kHz	12 ms ¹⁾
R&S®ZND	100 kHz to 8.5 GHz (option)					

¹⁾ 201 points, 200 MHz span, 100 kHz IF bandwidth, 2-port calibration on.

Important facts

Specification	R&S®ZND	Why this is important
Frequency range	100 kHz to 4.5 GHz or 8.5 GHz	This has to cover the working frequency range of the DUT.
Dynamic range	<ul style="list-style-type: none"> ▶ up to 120 dB (spec.) ▶ up to typ. 130 dB 	A high dynamic range is important for the measurement of e.g. high blocking filters, and it allows the use of larger IF filter for faster measurement speed.
Power sweep range	-45 dBm to +3 dBm (spec.) with option	Characterizing amplifiers requires a wide power sweep range. To avoid saturating the amplifier, the VNA needs to be able to generate a low power stimulus.
IFBW	1 Hz to 300 kHz	Narrow IFBW is required to provide a high dynamic range and wide IFBW reduces measurement times.
Measurement speed	13 ms (401 points, 200 MHz span, 300 kHz IFBW, full calibrated)	Especially in a production environment it is important to measure fast.
Trace noise	< 0.005 dB (RMS)	For accurate measurements a low trace noise is needed.
Dimensions (W x H x D)	461.1 mm x 239.9 mm x 351.0 mm	This determines how much space is needed for the whole set-up, as you always need space in front of the VNA for the measurement setup.
Weight	13.5 kg	

Scope of delivery

- ▶ Quick start guide
- ▶ CD with manual
- ▶ Power cable
- ▶ 3 year warranty

Recommended options/accessories

Hardware options	Type
High output power	R&S®ZND-B7

Extended frequency range, unidirectional, 8.5 GHz	R&S®ZND-K1
Time domain analysis (TDR)	R&S®ZND-K2
Full test set, base unit, bidirectional, 4.5 GHz	R&S®ZND-K5
Full test set, bidirectional, 8.5 GHz	R&S®ZND-K6
Extended power range for R&S®ZND	R&S®ZND-K7
Extended frequency range, full test set, bidirectional, 8.5 GHz	R&S®ZND-K8

The perfect choice for

Passive and simple active RF components tests

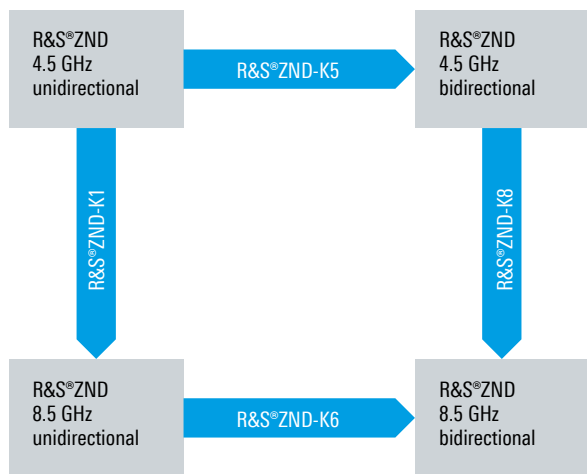

Production tests and repair

Education

Engineering office

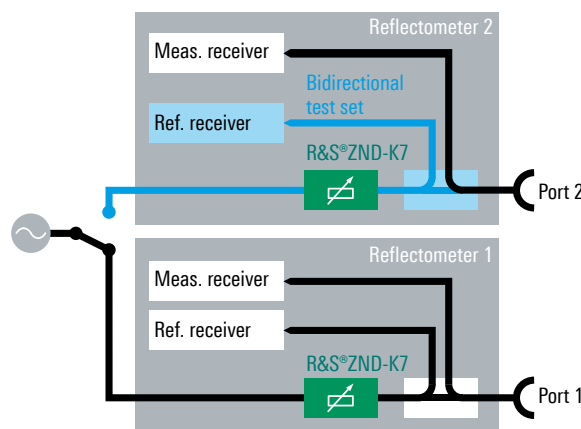

Your benefit	Features
Grows with your requirements	The base unit is a 4.5 GHz unidirectional test set. This can be upgraded via key codes to enable the bidirectional test set and to change the upper frequency limit to 8.5 GHz. If more features are needed, transition to the higher class R&S®ZNB is easy, as they have the same form factor, user interface and overlapping remote control commands
Solid RF performance	Output power of up to +10 dBm, dynamic range up to 130 dB
Easy to operate	12.1" touchscreen with 1280 × 800 pixel resolution, flat menu structures for efficient operation. Flexible display configuration for each measurement task

Upgrade options for R&S®ZND base unit

Unidirectional/bidirectional test set

The unidirectional test set incorporated in the R&S®ZND can be used to test passive components such as filters, connectors and antennas.

Easy to operate

Toolbar
Fast access to frequently used functions

Preloaded setups
Switchover between instrument setups by clicking a tab

> 100 channels and traces
Display of all parameters

Pop-up menus
Fast access to desired function

Large color touchscreen (12.1")
Clearly arranged display of many traces

Transparent dialog windows
Traces remain visible

Soft panel
Optionally on the right/left, for direct instrument control without submenus

Logically arranged hardkeys
Just a few key-strokes to desired configuration

Online help
Context-sensitive, including remote control commands

Undo/redo
Cancels or restores the last one to six entries

Widely spaced test ports
Easy connection of DUT, plenty of space for connecting test cables

USB connectors for auxiliary equipment
Connection of power sensor, automatic calibration unit, mouse/keyboard, memory stick

EMC precompliance

METERS AND COUNTERS

What is a multimeter?

A multimeter measures electrical values such as voltage, current and resistance. A multimeter is a combination of a multirange DC voltmeter, multirange AC voltmeter, multirange ammeter and multirange ohmmeter. It is widely used for quick measurements or troubleshooting, either manually or remote controlled, in electric and electronic devices. A digital multimeter converts the analog signal under test to digital bits and analyzes it in the digital domain.

What is a power analyzer?

Single phase power analyzers are designed to provide fast and efficient precision measurements of power consumption and test compliance with international standards.

What is an LCR bridge/meter?

An LCR bridge measures impedance parameters such as inductance, capacitance and resistance of an electronic component. Benchtop LCR meters typically have selectable test frequencies of more than 100 kHz to create data points at multiple spot frequencies. They often include options to superimpose a DC voltage or current on the AC measuring signal. In addition, benchtop meters allow the usage of special fixtures to measure surface mount device (SMD) components, air core coils and transformers. Often used in a general capacity, LCR bridges/meters can be used to validate and test development components during incoming inspection and to determine variations between parts. With fast measurements that shorten test times and binning interfaces to control a handler/sorter, LCR bridges/meters are also ideal for production facilities.

What is an arbitrary waveform generator?

An arbitrary waveform generator (AWG) generates electrical waveforms. It is usually used to test all aspects of a receive (RX) device to determine performance limits and unexpected behavior. AWGs can generate signals that closely approximate real-world signals, both wanted signals and interferers. The generated signals can be modified in precise ways to operate the receivers as usual or at performance limits.

Unlike function generators, AWGs can generate any arbitrarily defined waveform at their output. Some AWGs also operate as conventional function generators to produce standard waveforms such as sine, square, ramp, triangle, noise and pulse. Some units include additional built-in waveforms such as exponential rise and fall times, $\sin x/x$ and ECG. Some AWGs allow users to retrieve waveforms from a number of digital and mixed-signal oscilloscopes.

What is an audio analyzer?

An audio analyzer is a universal test instrument used to measure all kinds of audio equipment wherever music or speech is recorded, transmitted or processed. It usually includes a generator that produces all types of test signals and an analyzer that offers a variety of measurements such as level, frequency response, distortion and FFT analysis. Often the analog and digital interfaces on equipment need to be tested, including audio/video combining interfaces such as HDMI™.

- ▶ True RMS measurement, AC, AC + DC
- ▶ Simultaneous display of three measurement functions, e.g. DC + AC + statistics
- ▶ Measurement functions: DCV, DCI, ACV, ACI, frequency, resistance (2-wire and 4-wire), temperature, capacitance, diode and continuity test
- ▶ Mathematic functions: limit testing, minimum, maximum, average, offset, DC power, calculation of dB and dBm
- ▶ Data logging to internal memory or USB stick

Model overview

Model	Measurement range	Basic accuracy	Number of digits	IEEE-488 (GPIB)	LabVIEW
R&S®HMC8012	DC to 100 kHz	0.015% in DC range	5.75 digits	–	•
R&S®HMC8012-G	DC to 100 kHz	0.015% in DC range	5.75 digits	•	•

Important facts

Specification	R&S®HMC8012	Why this is important
Logging capability	saves up to 4 Gbyte of data directly to USB thumb drive, 200 measurements	Fast and large file capability for large data sets
Number of measurements displayed	3 simultaneous	More information visible at a glance; no need to toggle through measurements

Scope of delivery

- ▶ R&S®HZ15 silicone test leads with safety connectors and test probe, length: 1 m (black + red)
- ▶ Operating manual
- ▶ Power cable
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
PT100 temperature probe, 2-wire	R&S®HZ812
PT100 temperature probe, 4-wire	R&S®HZ887
Silicone test leads (included with base unit)	R&S®HZ15
19" rackmount kit, 2 HU for R&S®HMC series	R&S®HZC95

The perfect choice for	
General purpose	Engineering lab
Production testing	Hobbyists

Your benefit	Features
See more at a glance with three values displayed on one screen	Measured voltage, measured current, calculated power
Limit testing on color display for easy minimum/maximum analysis	Programmable test functions such as limit and min./max.
10 A range as standard	One current input with up to 10 A and no need to change connectors for different ranges
Saves up to 4 Gbyte of data directly onto storage devices	Writes directly to USB thumb drive

Application	How the R&S®HMC8012 meets your needs
General purpose	<ul style="list-style-type: none"> ▶ Clear 5 3/4-digit display ▶ Quick and easy measurements ▶ High resolution and accuracy ▶ Extremely useful in service and repair centers, training centers, universities and schools
Engineering lab	<ul style="list-style-type: none"> ▶ Wide frequency range from DC to 100 kHz ▶ Accurate four-wire resistance measurement ▶ Long-term data logging capability ▶ Fanless design
Production environment	<ul style="list-style-type: none"> ▶ LXI-compliant Ethernet interface ▶ USB and Ethernet interface, IEEE-488 (GPIB) (R&S®HMC8012-G only) ▶ SCPI remote control functionality ▶ LabVIEW drivers available

Simultaneous measurement display: Simultaneous display of three measurements, including DCI and ACI at the same time

Ideal for industrial environments: Easily slots into R&S®HZC95 2 HU 19" rackmount kit for production environment

R&S®HM8118 LCR Bridge

Universal, flexible and easy to use

- ▶ Basic accuracy: 0.05%
- ▶ Up to 12 measurements per second
- ▶ Parallel and serial mode
- ▶ Internal programmable voltage and current bias
- ▶ Kelvin cable and four-terminal SMD test adapter included
- ▶ R&S®HO118 binning interface (optional) for automatic sorting of components

Model overview

Model	Measurement range	Basic accuracy	Measurement functions	Measurement rate
R&S®HM8118	20 Hz to 200 kHz (69 steps)	0.05%	L, C, R, Z , X, Y , G, B, D, Q, φ, Δ, M, N	up to 12 values/s

Important facts

Specification	R&S®HM8118	Why this is important
Triggers	continuous, manual or external control via interface, binning interface or trigger input	Accommodates more complex manufacturing setups
Interface	galvanically isolated RS-232, USB, IEEE-488 (GPIB) (available)	Most operations for an LCR meter are programmed. Having a modern and easy to use interface helps minimize input errors.

Scope of delivery

- ▶ R&S®HZ184 four-terminal Kelvin test cable
- ▶ R&S®HZ188 four-terminal SMD component test fixture
- ▶ Operating manual
- ▶ Power cable
- ▶ 3 year warranty

Recommended options/accessories

Description	Type
Binning interface (Rohde & Schwarz service center installation only)	R&S®HO118

The perfect choice for

Engineering labs

Component validation

Production testing

General purpose

Comfortable

Equivalent circuit and range selection, either manual or automatic

Save/recall

Store and retrieve up to 10 instrument settings

Trigger

Continuous, manual or external control via interface, binning interface or trigger input

Complete

Internal voltage and current bias

The R&S®H0118 binning interface enables use with external hardware that sorts components by physical type after measurement. Data lines for eight sorting containers and control lines (ALARM, INDEX, EOM, TRIG)

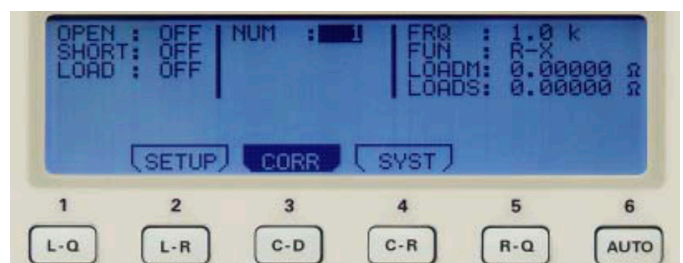

R&S®HM8118 LCR bridge

Your benefit	Features
Versatile functionality, all usually needed measurements included	The R&S®HM8118 provides the full range of measurements to characterize resistors, capacitors and inductors; results are displayed in absolute, relative or average values
Easy to use	Frequently used functions are directly accessible via front panel keys
Easy to interface for remote control	RS-232/USB interface; optional IEEE-488 (GPIB)
Quiet on the bench	Fanless design

Direct control: The most important parameters are adjustable with the press of a button

Ease of use: Activation and deactivation of OPEN, SHORT and LOAD correction

R&S®HMC8015 Power Analyzer

Comprehensive power analysis in a compact package

The R&S®HMC8015 power analyzer is the first compact tester for AC/DC load and standby current characterization that enables measurements without additional tools such as a computer or remote infrastructure. In addition to a numerical and graphical display with 26 key parameters, the instrument delivers performance and compliance protocols in line with IEC 62301, EN 50564 and EN 61000-3-2.

Model overview

Model	Bandwidth	Sampling rate	Resolution	Voltage input	Current input	Basic accuracy	IEEE-488 (GPIB)
R&S®HMC8015	DC to 100 kHz	500 ksample/s	2 x 16-bit simultaneous sampling	up to 600 V (RMS)	up to 20 A (RMS)	0.05% of reading	-
R&S®HMC8015-G							•

Important facts

Specification	R&S®HMC8015	Why this is important
Configurable user interface and display	fully configurable 3.5" QVGA color TFT display	Allows users to see the measurements. Also convenient for documentation and screenshot capture.
On-instrument policy testing	on-instrument energy star, IEC62301, EN 50564, EN 61000-3-2	Allows users to verify polices on the spot, without a PC and avoiding all of the associated IT and antivirus issues.
Broad set of advanced analysis	waveform mode, trendchart, inrush mode, harmonics view (using optional R&S®HVC151)	Gain insight into user problems quickly and easily with integrated analysis tools that are quick and easy to use.
Upgradeable voucher system	low base price plus options for advanced analysis, advanced I/O and policy testing	Gives users a low cost entry and allows them to purchase what they need, when they need it.

Software options: Can be ordered directly from the factory (R&S®HOC15x) or later (R&S®HVC15x) as a voucher.

R&S®UPP Audio Analyzer

Multichannel and cost-efficient, for use in the lab and in production

The compact, cost-efficient R&S®UPP200 audio analyzer is designed for system applications. It features low height and comes without front panel control elements or integrated display.

- ▶ Suitable for all interfaces: analog, digital and combined
- ▶ HDMI™ device testing
- ▶ Up to 80 kHz bandwidth and 200 kHz sampling rate

Model overview

Model	Channels	Analog analyzer frequency range	Analog analyzer voltage range (RMS, sine)	Analog audio inputs	Analog generator max. output level balanced (open circuit)	Audio monitor
R&S®UPP200	2	DC/20 Hz to 80 kHz	1 µV to 50 V	XLR female, balanced	14 V (RMS)	BNC connectors
R&S®UPP400	4	DC/20 Hz to 80 kHz	1 µV to 50 V	XLR female, balanced	14 V (RMS)	BNC connectors
R&S®UPP800	8	DC/20 Hz to 80 kHz	1 µV to 50 V	XLR female, balanced	14 V (RMS)	BNC connectors

Important facts

Specification	R&S®UPP200	Why this is important
Channels	2, 4 or 8 (up to 48 with optional cascading)	Ability to do multichannel testing for high throughput.
Max. analyzer bandwidth	80 kHz	Required by high-end broadband audio applications.
Sampling rate	200 kHz	The more samples provided, the better the frequency resolution you get.
FFT analysis	up to 256 ksample	Fast frequency response measurement implemented by means of an FFT provides a critical edge during this highly time-critical measurement.
Remote control interfaces	USB, LAN, IEEE-488 (GPIB)	Remote control capability is indispensable in production environments.

Scope of delivery

- ▶ Quick start guide
- ▶ CD with operating and service manual
- ▶ Power cable
- ▶ 3 year warranty

The perfect choice for

Audio analysis

HDMI™ applications

Measurements on multichannel devices

Measurements on mixed interfaces

Your benefit

Powerful and fast

All test signals and measurement functions in a single box

Convenient operation

Features

- ▶ Parallel measurements for high throughput
- ▶ High measurement speed throughout the system
- ▶ Ideal for use in production
- ▶ Multichannel measurements by means of cascading
- ▶ Powerful and even multichannel FFT analysis
- ▶ User-programmable filters that can be adapted in seconds to the individual measurement task
- ▶ Integrated control PC
- ▶ State-of-the-art and intuitive user interface makes operation quick and easy to learn
- ▶ All measurement results at a glance
- ▶ Effective online help functions

All test signals and measurement functions in a single box: Complex test signals from WAV files can be output at all interfaces; in this example, the waveform function shows the time characteristic of a dual-channel music signal

All measurement results at a glance: Multiple measurement diagrams can be arranged in any desired configuration on the screen; analyses in the frequency and the time domain can be displayed simultaneously

R&S®NRX Power Meter

The new power meter generation with a modern and intuitive user interface

The R&S®NRX simultaneously supports up to four Rohde&Schwarz power sensors and displays the results clearly on the flexible configurable screen. The user interface with the touchscreen based operating concept simplifies operation. In addition, function keys on the front panel provide quick access to the most important functions.

Model overview

Model	Frequency range	Power measurement range	Measurement channels	Display	Compatible sensors	Weight
R&S®NRX	DC to 110 GHz (sensor-dependent)	0.1 fW to 30 W (average) (sensor-dependent)	1 to 4	5"/12.7 cm (touch) with 800 × 480 pixel resolution (WVGA)	<ul style="list-style-type: none"> ▶ R&S®NRPxxS(N)/T(N)/A(N) series ▶ R&S®NRP-Zxx series ▶ R&S®NRQ6 frequency selective power sensor ▶ R&S®NRT-Zxx directional power sensors 	2.35 kg/2.58 kg (option-dependent)

Important facts

Specification	R&S®NRX	Why this is important
Large high-resolution touchscreen	TFT 5" 800 × 480 pixel	Intuitive and fast operation.
Number of measurement channels	1 to 4	Flexibility to meet current and future requirements.
Sensor compatibility	R&S®NRPxxS/SN, R&S®NRPxxT/TN/TWG, R&S®NRPxxA/AN, R&S®NRP-Zxx, R&S®NRT-Zxx	One base unit for all current Rohde & Schwarz power sensors and selected discontinued sensors.
Automatic pulse analysis	with R&S®NRP-Z8x sensors	Time-saving, no need for manual calculation.
Sensor check source	50 MHz/1 GHz, CW and pulse mode	High-precision sensor verification in a module.
Power reflection measurements	R&S®NRX-B9 option	First base unit compatible with termination and directional power sensors in a single device.

Scope of delivery

- ▶ Quick start guide
- ▶ Power cord
- ▶ 3 year warranty

Third and fourth measurement channel	R&S®NRX-K4
Recommended extras (should be ordered with R&S®NRP power sensors)	
8-pole interface cable, length: 1.50 m	R&S®NRP-ZK8
8-pole interface cable, length: 3.00 m	R&S®NRP-ZK8
8-pole interface cable, length: 5.00 m	R&S®NRP-ZK8
Recommended accessories	
19" Rack adapter (for one R&S®NRX power meter and one empty casing)	R&S®ZZA-KNA22
19" Rack adapter (for two R&S®NRX power meters)	R&S®ZZA-KNA24

The perfect choice for

Easy RF power measurements

Multichannel measurements

RF pulse analysis

System integration

Your benefit

Easy to use

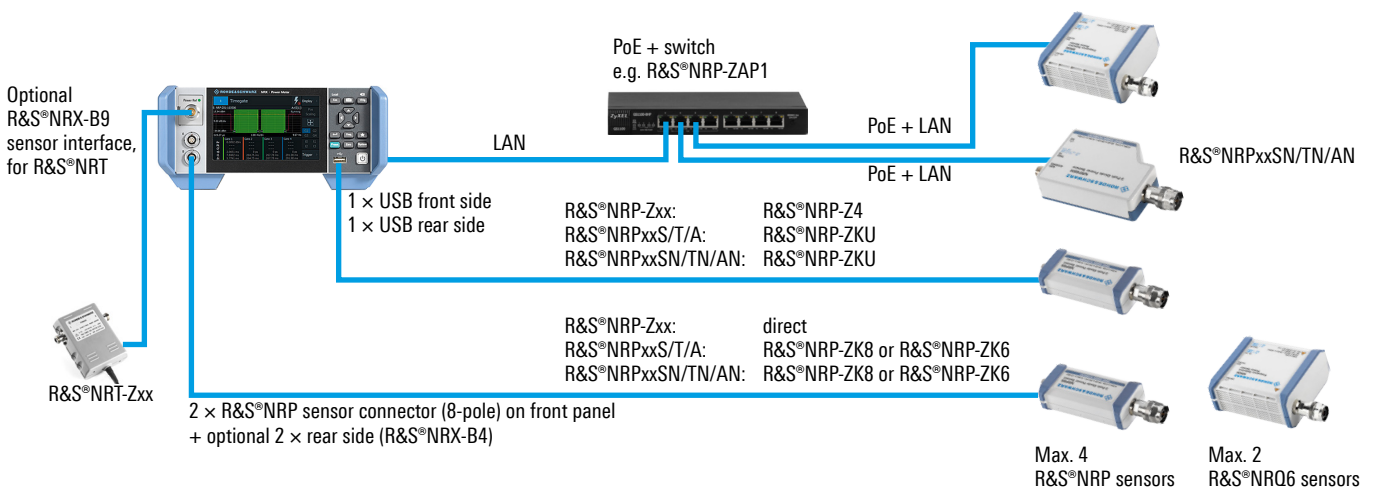

Sensor check source

All-in-one base unit

Features

- ▶ Clear color touchscreen supports the intuitive, window-based operating concept
- ▶ Color-coded key parameters and functions can be seen at a glance
- ▶ Results are presented in numerical and graphical display windows that can be easily configured
- ▶ Superior pulse reference generator
- ▶ Test source for sensor and DUT
- ▶ Variable mode (CW/pulse), frequency (50 MHz/1 GHz) and discrete power steps
- ▶ Supports multipath, thermal, wideband and averaging sensors
- ▶ Supports frequency selective power sensors
- ▶ Supports directional power sensors

Universal sensor connectivity

Automatic pulse analysis:

All R&S®NRP-Z8x wideband power sensors allow automatic pulse analysis. Up to 12 of 18 user-selected pulse parameters can be displayed in addition to the measurement trace.

Flexible device interfacing:

The R&S®NRX provides three different remote interfaces for integration in automated test setups: Ethernet, USB and optionally IEEE-488 (GPIB) (R&S®NRX-B8).

R&S®NRP-Z211/-Z221 Two-Path Diode Power Sensors

Get accurate results faster

The R&S®NRP-Z211/-Z221 two-path diode power sensors combine all key characteristics relevant for their use in production. They are cost-effective, fast, precise and USB-capable, offering the best price/performance ratio in their class.

- ▶ Innovative two-path diode power sensor with enhanced interrange performance
- ▶ 80 dB dynamic range for CW and modulated signals
- ▶ Automatic burst detection and acquisition
- ▶ Low sensitivity to harmonics

Model overview

Model	Frequency range	Sensor type	Connectivity
R&S®NRP-Z211	10 MHz to 8 GHz	multi-path (2 diode)	USB
R&S®NRP-Z221	10 MHz to 18 GHz	multi-path (2 diode)	USB

Scope of delivery

3 year warranty

Recommended options/accessories

Description	Type
USB adapter cable (passive)	R&S®NRP-Z4
USB adapter cable (active)	R&S®NRP-Z3
R&S®NRPV license for one sensor	R&S®NRPZ-K1
Sensor hub	R&S®NRP-Z5

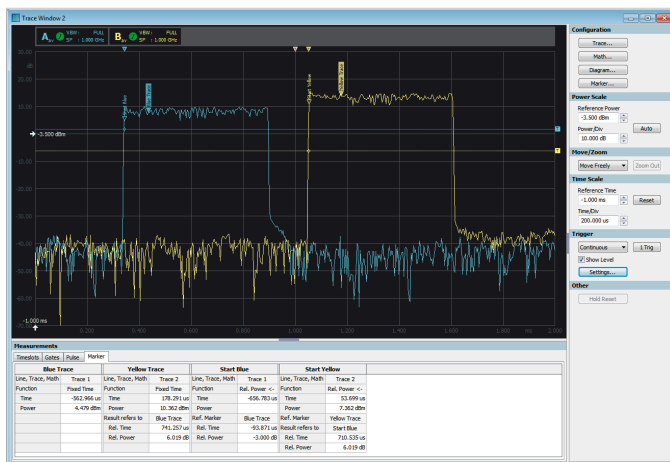

The perfect choice for

Base stations and mobile equipment

Calibration

R&S®NRPV: convenient power measurements via PC application

- ▶ Pulse delay measurement on different traces (1)
- ▶ Gated measurement of two GSM/EDGE traces with the R&S®NRP-Z81 (2)
- ▶ In combination with the R&S®NRPV virtual power meter software, the USB capability of the R&S®NRP-Z211/-Z221 power sensors can be ideally utilized. The software covers all sensor functions and supports up to four sensors connected to a laptop/PC via the R&S®NRP-Z3/-Z4 USB adapter cables or the R&S®NRP-Z5 sensor hub. The sensors are automatically detected when plugged in and added to all open measurement windows (hot plugging).

(1)

(2)

Your benefit	Features
USB sensors with no compromises	The R&S®NRP-Zxx power sensors are USB sensors that can be used standalone and have no downside in terms of versatility, accuracy and functionality
Highest accuracy	R&S®SmartSensor technology
Fastest time to accurate measurements	<ul style="list-style-type: none"> ▶ Widest measurement range ▶ Lowest noise floor ▶ Fastest measurements

Multiple ways to operate R&S®NRP-Z211/-Z221 power sensors

- ▶ The power sensors can be operated either on an R&S®NRP2 base unit or directly on a laptop/PC. They are also supported by numerous signal generators, signal analyzers, spectrum analyzers and network analyzers from Rohde & Schwarz. The R&S®NRP-Z4 passive USB adapter cable is all that is needed to connect the sensors to a laptop/PC.
- ▶ The R&S®NRP-Z5 sensor hub allows users to connect up to four sensors to a laptop/PC without additional adapters and to simultaneously start the measurements using an external trigger signal.

R&S®NRP Power Sensors

Intelligent, LAN enabled power measurements

The R&S®NRP power sensors have long been recognized for delivering supreme precision and speed. The R&S®NRPxxS(N), R&S®NRPxxT(N) and R&S®NRPxxA(N) power sensors take power measurements to the next level. They offer USB capability and can be additionally controlled via LAN. This makes the R&S®NRP power meter portfolio unique in the industry

Model overview

Model	Frequency range	Sensor type	Connectivity	Description
R&S®NRX ¹⁾	–	power meter	–	Base unit supports up to four R&S®NRP sensors.
R&S®NRPxxS, R&S®NRPxxSN ²⁾	10 MHz to 50 GHz	three-path diode	USB, LAN	Leading performance sensors deliver accurate results quickly. Models available ranging from 10 MHz to 50 GHz.
R&S®NRPxxT, R&S®NRPxxTN	DC to 110 GHz	thermal	USB, LAN	Most accurate results. Models available ranging from DC to 110 GHz.
R&S®NRPxxA, R&S®NRPxxAN	8 kHz to 18 GHz	average	USB, LAN	Ideal for EMC applications. Models available ranging from 8 kHz to 6 GHz or 18 GHz.
R&S®NRP-Z8x	50 MHz to 44 GHz	wideband	USB	Ideal for characterizing pulses. Models available ranging from 50 MHz to 44 GHz.
R&S®NRP-Z2xx	10 MHz to 18 GHz	two-path diode	USB	A cost-effective measurement solution.

¹⁾ No cable supplied as standard. Please select R&S®NRP-ZKU for USB (4 lengths available) and/or R&S®NRP-ZK6 (3 lengths available) for PC, R&S®NRP2 and Rohde & Schwarz instrument connection.

²⁾ No cable supplied as standard. To operate the R&S®NRPxxSN sensors over the LAN interface, a power over Ethernet adapter is required, such as the R&S®NRP-ZAP1 (no LAN cables come with the R&S®NRP-ZAP1). The sensor can also be operated with the R&S®NRP-ZKU or R&S®NRP-ZK6 cables.

Important facts

Sensor type R&S®	Specification	Rohde & Schwarz power sensor	Why this is important
NRPxxS/SN multi-path sensor	LAN connection	all models	LAN connection allows remote control and access anywhere.
	measurement range	–70 dBm to +23 dBm	Make accurate measurements on signals with lower power levels. Less internal noise means faster, more accurate measurements.
	measurement speed	> 50 000 readings/s	A faster sensor significantly increases test time to accuracy.
	external trigger	•	Allows you to control the moment when the sensor will take its reading. The built-in trigger on R&S®NRP sensors operates at power levels 13 dB lower than the competition.
NRPxxT/TN thermal sensor	LAN connection	all models, except 110 GHz sensor	LAN connection allows remote control and access anywhere.
	measurement time	45 ms	A faster sensor significantly increases test time to accuracy.
	linearity	< 0.007 dB	
NRPxxA/AN average sensor	LAN connection	all models	LAN connection allows remote control and access anywhere.
	frequency range	► 8 kHz to 6 GHz ► 8 kHz to 18 GHz	Measure a wider spectrum using a single device. EMC specifications are moving towards starting at 8 kHz, making the R&S®NRPxxS/SN the only sensors available for this.
	measurement range	–70 dBm to +23 dBm	Higher measurement range allows a simpler test setup with less need for external attenuators. Make accurate measurements on signals with lower power levels. Less internal noise means faster, more accurate measurements.
NRP-Z8x average sensor	frequency range	up to 44 GHz	Enables wideband or pulsed measurements in the key frequency bands between 40 GHz and 44 GHz
	measurement range	–60 dBm to +20 dBm	Make accurate measurements on signals with lower power levels. Less internal noise means faster, more accurate measurements.

The perfect choice for

Base stations and mobile equipment

Calibration

Your benefit	Features
Make a measurement anywhere with LAN based sensors	Complete range of LAN sensors (multi-path, thermal and average), from DC to 67 GHz
High measurement speed	> 50 000 readings/s ¹⁾
Fastest time to accurate measurements	<ul style="list-style-type: none"> ▶ Widest measurement range ▶ Lowest noise floor ▶ Fastest measurements

¹⁾ For R&S®NRPxxS(N).

Scope of delivery

- ▶ Quick start guide
- ▶ CD with operating and service manual
- ▶ Power cable
- ▶ 3 year warranty

Key facts

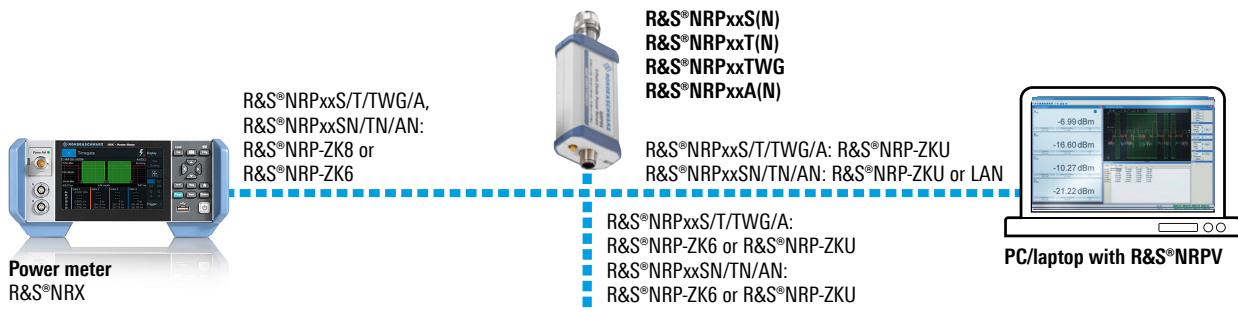

- ▶ Maximum dynamic range: -70 dBm to +45 dBm
- ▶ Frequency range: DC to 110 GHz
- ▶ More than 50 000 readings/s¹⁾
- ▶ Flexible operation with R&S®NRP2 base unit, laptop/PC and many Rohde&Schwarz instruments
- ▶ Control and monitoring via LAN and USB
- ▶ Easy LAN operation from a web browser
- ▶ R&S®NRPxxS(N) for widest dynamic range
- ▶ R&S®NRPxxT(N) for highest accuracy
- ▶ R&S®NRPxxA(N) for EMC applications

¹⁾ For R&S®NRPxxS(N).

Simultaneous, location-independent remote monitoring of multiple R&S®NRPxxSN/TN/AN power sensors using a web browser

Multiple ways to operate the R&S®NRPxxS(N), R&S®NRPxxT(N) and R&S®NRPxxA(N) power sensors

Supported Rohde & Schwarz instruments

Signal generators
e.g. R&S®SMW200A

Signal and spectrum analyzers
e.g. R&S®FSW

Network analyzers
e.g. R&S®ZVA

SERVICE YOU CAN RELY ON

Extended warranty

Long-term benefit: all the advantages of the R&S®Extended Warranty

Helping you get the best performance in your core business is our main focus. In addition to long-lived, high-end products, we offer very dependable service with our extended warranty. You can decide which of our high-performance service packages is right for you. The benefits of the R&S®Extended Warranty at a glance:

Low, predictable costs

With highly complex instruments or systems, it is not always possible to avoid problems. As the manufacturer, we are thoroughly familiar with the special features of our products and know where to look if there is a problem. Our R&S®Extended Warranty keeps the overall costs for your product transparent and consistent at all times. For example, a four-year warranty can often be cheaper than a single repair.

Added value

With every maintenance, repair and calibration, you benefit from efficient Rohde&Schwarz solutions. This can be very cost-effective in the long term.

Reliable and dependable

Lasting functionality and availability are fundamental to profitable operations. Regular maintenance and calibration of your Rohde&Schwarz instruments ensures dependable workflows that lose none of their precision even after many years. A four-year extended warranty with calibration coverage directly from the manufacturer ensures that your instruments are regularly checked and adjusted. You can depend on the highest precision and on everything going according to plan – now and in the future.

Added value

Nobody understands your instruments better than the manufacturer. Rohde&Schwarz service means that whenever we maintain or calibrate your instruments, we also check whether modifications and updates are called for, and bring them up to date. That's a service only the manufacturer can offer.

Transparent and flexible

Operation of your instruments can result in costs you did not originally factor in. The R&S®Extended Warranty makes it easy for you to keep an eye on your operating costs. Our knowledgeable representatives will help you find the right services for your business requirements. You can quickly find the best way to make sure your instruments always operate to their full potential, so you can focus on your core business.

Added value

The R&S®Extended Warranty makes it easy for you to budget by giving you absolute price stability for the term of the agreement. Our distribution partners can show you all of our service options.

Extended warranty and calibration coverage

To make sure you get the full benefit of the functionality and precision of your instruments for the longest possible time, we offer a range of services that are tailored to your specific needs. Choose extended warranty (WE1 to WE2) for complete protection in the case of repairs, or the attractive extended warranty with calibration coverage package with R&S®Manufacturer Calibration (CW1 to CW2) for additional regular calibration of your instrument. All options are available with terms from one to two years depending on the duration of the standard warranty.

Description	Extended warranty (WE1-2)	Extended warranty with calibration coverage (CW1-2)
Repair in case of malfunction All repairs during the warranty period are free of charge.	•	•
Calibration if necessary as part of repair All necessary calibrations will be made during the repair.	•	•
Planned calibrations in line with Rohde & Schwarz guidelines and ISO/IEC 17025 With our precision test and diagnostics systems, we analyze your equipment in detail to detect and correct irregularities before they impact your measurements. Your instruments stay in top working condition.		•
Calibration as needed as part of hardware upgrades We take care that your Rohde & Schwarz product is regularly calibrated and maintained at the recommended intervals during the warranty period, including calibrations as part of hardware upgrades to the latest technologies.		•
Firmware updates As part of regular checks, we will update your instrument's firmware to improve product characteristics, enhance system performance and bring all functions up to date.	•	•
Preventive maintenance and reliability modifications To improve the performance and reliability of your instrument, we maintain it with the greatest care and precision. This naturally includes hardware updates, a service that only the manufacturer can offer.	•	•

WE and CW for products with 3 year warranty

Get your products serviced within your region

SERVICE

Rohde & Schwarz stands for innovative service products throughout the entire product lifecycle, supported by a global service network.

The following services are available in over 70 countries:

- ▶ Calibration
- ▶ Maintenance and repair
- ▶ Product updates and upgrades
- ▶ Remote service

Rohde & Schwarz regional service centers, plants and specialized subsidiaries provide a wide range of additional services for system customers:

- ▶ System integration
- ▶ Application support
- ▶ Development of customized modules, equipment and systems
- ▶ Software development
- ▶ Installation and commissioning
- ▶ Application support

During the product's useful life, Rohde & Schwarz supports its customers with service level agreements in the following areas:

- ▶ System support
- ▶ Training
- ▶ Maintenance
- ▶ Spare parts service
- ▶ Integrated logistics support
- ▶ Obsolescence management
- ▶ Technical documentation

Service that adds value

- Worldwide
- Local and personalized
- Customized and flexible
- Uncompromising quality
- Long-term dependability
