LS2-S01

Standard elongated hole, small type **BGS-S, BGS-2S** series

Can be safely used in locations with small mounting space

Small type

BGS-S series is one of the smallest distance setting type photoelectric sensors. BGS sensors can now be used in locations where only small-sized diffuse-reflective type photoelectric sensors could be used up to now.

Prevention of chattering

Type with timer functions

The BGS-2S30NT is equipped with an OFF delay timer which can delay the time in which output is shut off by 0 to 100 ms. It is also effective when inputting to devices in which detecting signal slow.

OFF delay timer ▶

High-speed response

0.5 ms high-speed response type

This photoelectric sensor with built-in amplifier features a top level response time of 0.5 ms or less. This feature makes its use on high speed production lines possible.

Water resistant structure

Degree of protection on IP67

All models in the BGS series conform to IP67 (protective resistance standard) and feature excellent dust and water resistance. It also conforms to CE standards and can be used in a wide range of locations.

For accurate detection of small workpieces

Small spot type (BGS-S03N)

BGS-S03N is equipped with a very small light spot which helps to detect small objects like electronic components. (at distance of 30 mm)

Direct output

OFF delay output

For accurate detection of substrates

Substrate detection type (BGS-2S10N)

Features of this type include stable detection even if the substrate type is changed, as well as high repeat accuracy, even among models in the series.

Distance adjustment

	Order	Diagram	Potentiometer	Light receiving indicator	Adjustment procedure
BGS	1			ON 	Set the object in the detection position and gradually raise the distance adjustment from the minimum to position A where the indicator will light up.
	2			OFF 	Remove the object and gradually lower the distance adjustment from the maximum to position B where the indicator will turn on.
	3			ON 	Position C between positions A and B is the optimal position for threshold. Positions A and B may be reversed depending on the model and the detection conditions. Place the workpiece in a fixed position and perform an operational check.

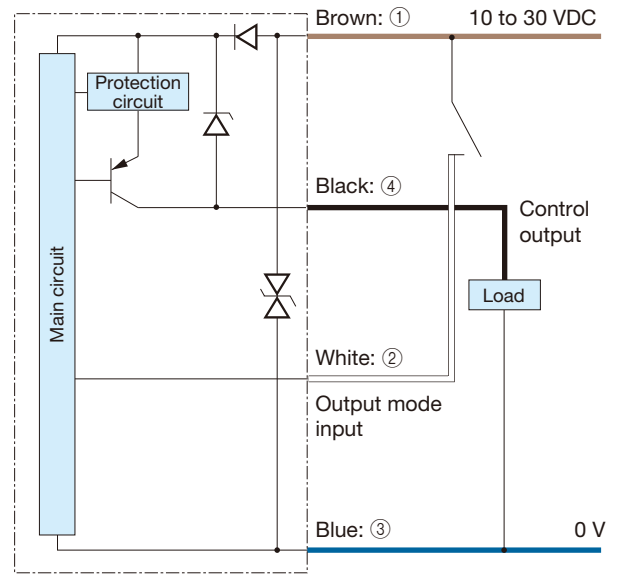

Photoelectric Sensors

I/O circuit diagram

NPN output type

PNP output type

*White lead wire: ② is only equipped to BGS-S03□, -S08□, -2S30□T

Connector type

(Pin configuration)

- ① 10 to 30 VDC
- ② Not connected/+V: Light ON (NPN)
0 V: Dark ON
- ③ 0 V
- ④ Control output

*Pin No. ② is not used for BGS-2S10□, -2S15□, -2S30□.

Connecting

- Turns to Light ON mode when the white wire is connected to +V or not connected and to Dark ON mode when connected to 0 V (for NPN). To use without connecting, disconnect and wrap individually with insulating tape, etc. Do not connect it to any other terminal.
- ① to ④ are connector pin No.

Notes

- When using a switching regulator for the power supply, be sure to ground the frame ground terminal.
- Avoid wiring in parallel with or in the same piping as high-voltage wires or power lines. Doing so may lead to malfunctions caused by noise. Also, shorten the power supply and signal wires as much as possible.
- Avoid using the transient state while the power is on (approx. 100 ms).
- The connector direction is fixed as in the drawing to the right when you use L-shaped connector cable. Be aware that rotation is not possible.
