The Supermicro Advantage

With advanced product design and uncompromising quality control, Supermicro's expert engineers provide the industry with a wide range of products that feature high-performance, high reliability, and cost effective solutions. Designing first-to-market server platforms, Supermicro offers fully optimized functionality and compatibility for mission-critical applications. All of Supermicro's technologically advanced server solutions must pass a 100% strict validation process, which offers our customers peace of mind so they can concentrate on growing their business.

The Most Extensive Product Line in the Industry

Supermicro's engineering expertise has produced more than 250 Xeon/Pentium-based serverboards and over 500 optimized chassis. With our state-of-the art server solutions and outstanding technical support, customers can ramp up their business quickly and successfully with a reduced total cost of ownership (TCO)

Xeon 5100/5000 Sequence Server Solutions

Supermicro's industry-leading line of dual-core Xeon 5100 and 5000 Sequence processor-based server solutions feature a 1333MHz front-side bus and support up to 64GB of FBD (fully buffered DIMM) memory. These new dual-core solutions are packed with exceptional features and offer significantly better performance over their predecessors while consuming less power.

SAS: Advanced Storage Technology

Supermicro products are built to meet the demands of today's businesses for the efficient management of massive amounts of information. Supermicro's SAS (Serial Attached SCSI) products, including the SES2 (SCSI Enclosure Services 2) monitoring/management feature, are the first in the industry to offer complete solutions with multiple choices. SAS, the future of SCSI technology, provides superior performance (3 Gb/s per port; 8 ports per controller), advanced scalability (128 hard drives per controller), and better compatibility (compatible with SATA hard drives for a more cost-effective option), and no price premium when compared to SCSI solutions.

Low-Power Solutions

Power needs are ever increasing with the rise in computing performance. Enterprise data centers including HPC clusters and large server farms are consequently the ideal place for implementing innovative power conservation solutions and effective cooling systems to reap immediate benefits. Leading an industry migration to environmental consciousness and energy conservation, Supermicro is designing and producing highly efficient power supplies and cooling systems built around Dual Core Xeon high-performance, low-power processors to serve the needs of energy saving customers worldwide.

100% Redundant Cooling Systems

With Supermicro's patented 100% redundant cooling designs, systems can run continuously at 100% full speed, even when a fan failure occurs. Through a combination of expertly engineered high-performance fans and unique air-shrouds, our complete line of chassis offers superior performance and dramatically reduces the possibility of degraded performance due to thermal issues.

85% or More Power Supply Efficiency Designed for Lower TCO & Environmental Protection

Supermicro understands the challenges our customers are facing today in growing their businesses. Addressing this, Supermicro has penetrated the power supply design challenge to produce high-quality, high-performance solutions with efficiency ratings of 83% or higher. Supermicro solutions continue to outperform and outlast the competition providing the best technology investment available to customers worldwide.

Supermicro is RoHS Compliant

Supermicro is proud to rally a migration to server products that contain minimal amounts hazardous substances as required for environmental protection and recycling. With the RoHS Directive changing the electronics industry worldwide, Supermicro is producing environmentally safe products in compliance with industry standards that meet or exceed RoHS requirements and directives. Supermicro works tirelessly to ensure that all our products, components, and subassemblies meet or exceed applicable RoHS standards and specifications.

SUPER● X7DBR-8+ Serverboard + SC815S-700 Chassis

With optimal performance in a high-density 1U chassis, the X7DBR-8+ serverboard features abundant FBD memory support with up to 16 memory modules for a maximum of 64GB of memory. Built as an enterprise building block solution, it offers an ideal solution for minimal-downtime cluster server systems. Combined with the new SC815S-700V chassis, a high-efficiency 700W power supply supports the maximum frequency of dual-core Xeon 5100/5000 sequence processors, one PCI-X or PCI-E expansion card, dual gigabit connectivity and more. Sophisticated management software, Supermicro Intelligent Management (SIM) and Super Doctor III, are included as an option to ensure that this great serverboard-chassis combination is simple to configure, deploy and manage on a day-to-day basis for continual performance and maximum data availability.

2U High-Performance SAS w/SES2 Dual-Core Xeon 5100/5000 Server

SUPER[®] X7DB3 Serverboard + SC825TQ-R700LP Chassis

Combining the high-performance X7DB3 serverboard with the new SC825TQ-R700LP- chassis, Supermicro has produced yet another optimized 2U server system. This new serverboard supports dual-core Xeon 5100/5000 sequence processors and Serial Attached SCSI (SAS) storage technology, which is backward compatible with industry-proven parallel SCSI software and middleware to protect existing SCSI investments and lower transition risks. The new 2U chassis improves upon the winning formula of the SC823 chassis and optimizes every aspect of interior space between the serverboard and the chassis without compromising superior cooling. The SC825TQ-R700LP chassis also features larger and more flexible interior space paired with additional hard drive bays allowing more system flexibility. Moreover, a high-efficiency 700-watt power supply with I²C management powers the system.

SUPER● X7DB8+ Serverboard + SC745S2-R800 Chassis

With performance, quality, availability and versatility in mind, Supermicro offers a quintessential server system that combines the X7DB8+ serverboard and the SC745S2 tower/4U server chassis. Powered by the latest dual core Xeon 5100/5000 sequence processors with up to 64GB of FBD memory support, this combination offers versatility in either a tower or 4U rackmount form factor and supports up to eight enterprise-class SCSI drives, provide exceptional storage performance. Designed with 100% cooling redundancy via a combination of high-performance fans and a custom-designed air-shroud, the probability of downtime or performance reduction is greatly reduced. Thanks to a potent, redundant 800W high-efficiency power supply, hot-plug fans and hot-swappable drive bays, this combination offers reliable performance, problem-free maintenance and peace of mind.

Versatile Workstation Platform

SUPER●® X7DAL-E

This mainstream versatile workstation/server board is based on Intel's high-bandwidth 5000X chipset with 1333MHz of FSB. It takes advantage of the FB-DIMM memory modules for faster response and greater memory capacity for data-intensive applications. Moreover, the dual-core Xeon 5100 sequence Xeon processors provide unparalleled computing power without demanding energy requirements, which is ideal for workstation environments. Another great feature of this solution is the Universal I/O or UIO implementation. The UIO slot allows users to have the choice over the system's storage applications, in SAS, SCSI, or SATA without sacrificing a PCI slot for add-on cards. Combined with the ability to facilitate dual PCI-E x16 expansions, the X7DAL-E is ideal for graphics intensive applications, movie rendering and other scientific / engineering applications that require a great deal of I/O bandwidth and computing power.

Key Features:

- ✓ Dual-core Xeon 5100/5000 Sequence
- ✓ Intel 5000X chipset
- ✓ 1333/1066/667MHz system bus
- ✓ 24GB ECC FB-DIMM DDRII 667/533 SDRAM
- ✓ 1 PCI-Express x16
- 1 PCI-Express x4 (in PCI-E x16 slot)
- 2 PCI-X 133MHz
- 2 PCI & 1 UIO
- ✓ Dual Gigabit Ethernet ports
- ✓ Intel ESB2 for 6 SATA ports (3 Gbps)
- ✓ AC'97 Audio
- ✓ Eight USB 2.0 ports

Energy-Efficient Performance

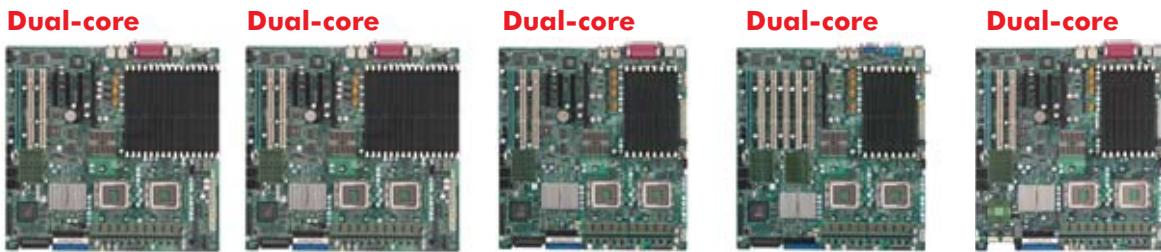

SUPER●® PDSME+

Supporting the Dual-Core Intel® Xeon® processor 3000 sequence/Core 2 Duo processors, the UP serverboard PDSME+ provides outstanding computational performance and yet offers future upgradeability to a quad-core (Kentsfield) processor. The 1066 MHz system bus (also supports 800 or 533 MHz) with the support for up to 8GB of un-buffered DDR2-667/533 memory ensures the maximum memory bandwidth and data transfer rate. With four PCI-X 133/100 and two PCI-Express x8/x4 expansion slots, the PDSME+ also supports a Supermicro Intelligent Management card for IPMI 2.0 server remote management with Virtual Media-over-LAN and KVM-over-LAN. Featuring four SATA ports (3 Gb/s) with RAID 0, 1, 5 and 10, and dual Intel PCI-Express Gigabit LAN ports while providing excellent value with rich features and high performance, PDSME+ is also a fully RoHS (6/6) compliant earth-friendly serverboard.

Key Features:

- ✓ Dual-core Xeon 3000 & Core 2 Duo processor E6000/E4000 Sequence
- ✓ Intel E3010 chipset
- ✓ 1066/800/533MHz system bus
- ✓ 8GB Unb. ECC, non-ECC DDRII 667/533 SDRAM
- ✓ 2 PCI-X 133MHz, 2 PCI-X 100MHz
- 1 PCI-Express x8
- 1 PCI-Express x4
- ✓ Dual PCI-Express Gigabit Ethernet ports
- ✓ Intel ICH7R for 4 SATA ports (3 Gbps)
- ✓ ATI ES1000 16MB PCI graphics
- ✓ IPMI 2.0 with virtual media over LAN & optional KVM-over-LAN

**SUPER●® SC815S-700/R650
SC815TQ-700/R650**

- 4 hot-swap drive bays
- 700W cold-swap power supply
- 650W redundant power supply
- High-Efficiency Power

SUPER●® SC819S-700/SC819TQ-700

- 2U in 1U™
- 1U with 4 expansion slots
- 700W cold-swap power supply
- High-Efficiency Power
- 3 hot-swap drive bays

SUPER●® SC816S-(R)700/SC816A-(R)700

- 1U with 2 expansion slots
- Redundant 700W/700W
- High-Efficiency Power
- 4 hot-swap drive bays

SUPER●® SC813S-520/SC813TQ-520

- 4 hot-swap SAS/SATA drive bays
- High Efficiency Power
- 520W

SUPER●® SC812L-520

- 3 fixed SAS/SATA drive bays
- 520W power supply
- 2 PCI-X/E slots
- Optimized for clustering

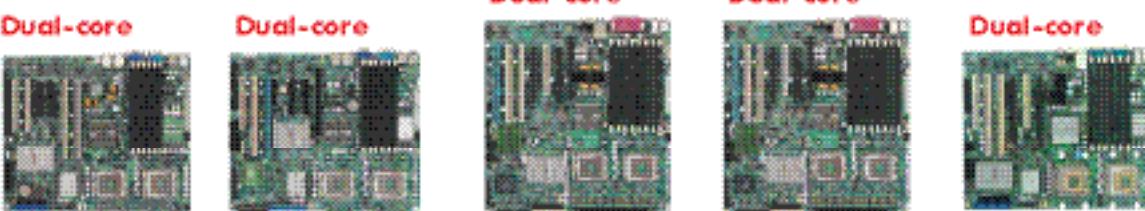

SUPER●® SC825TQ-R700RC/R700LP

- 8 hot-swap drive bays
- Butterfly riser card
- Redundant 700W power supply
- High-Efficiency Power

Optimized Dempsey/Woodcrest Chassis

SUPER●® SC512F-520/SC512F-280

- 14" depth small form factor 1U
- 1 x 3.5" fixed drive bays
- 520W power supply
- 280W power supply (Woodcrest only)

SUPER●® SC833S/SC833S2/SC833T-R760

SC836S2/SC836T-R800

- 8 hot-swap SCA bays (SAF-TE compliant)
- Triple redundant 760W power w/ I²C mgt.
- 6 Hot-swap fans for 100% cooling redundancy
- Air-shroud for better cooling
- 3U x 25.5"

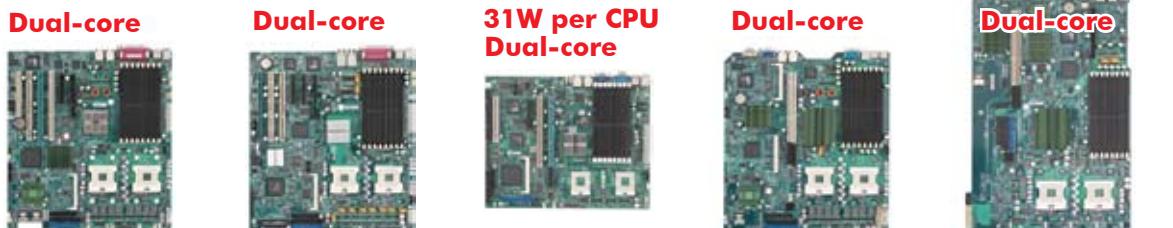

SUPER●® SC743S2-R760/650/645

- 8 hot-swap SCA bays
- Triple redundant 760W power w/I²C mgt. (R760 only)
- 6 Hot-swap fans for 100% cooling redundancy
- Tool-less PCI & rotatable drive bay module
- 4U x 25.5"/Tower

Optimized Chassis Highlights

SUPER[○] SC743S1-R760/650

- 8 hot-swap SCA bays
- Triple redundant 760W power w/I²C mgt. (R760 only)
- 6 Hot-swap fans for 100% cooling redundancy
- Tool-less PCI & rotatable drive bay module
- 4U x 25.5"/Tower

SUPER[○] SC833S-R760

- 8 hot-swap SCA bays (SAF-TE compliant)
- Triple redundant 760W power w/I²C mgt.
- 6 Hot-swap fans for 100% cooling redundancy
- Air-shroud for optimal cooling
- 3U x 25.5"

SUPER[○] SC823T-R500RC

- 6 hot-swap SATA bays
- Redundant 500W power w/I²C mgt.
- 4 high-performance hot-swap fans
- 3 full-size PCI expansion slots
- 2U x 25.5"

SUPER[○] SC933S2-R760

- 14 hot-swap SCA 2-channel bays (SAF-TE compliant)
- Triple redundant 760W power w/I²C mgt.
- 6 Hot-swap fans for 100% cooling redundancy
- Air-shroud for optimal cooling
- 3U x 25.5"

SUPER[○] SC942S-600

- 10 hot-swap SCA bays (SAF-TE compliant)
- Triple redundant 600W power supply
- Optimized for either rack or tower
- 4U x 23.8"/Tower

SUPER[○] SC742T-550

- 7 hot-swap SATA bays
- 550W redundant cooling power supply
- Hot-swap cooling fans
- 4U x 24.2"/Tower

SC933 3U Storage Chassis with 100% Cooling Redundancy

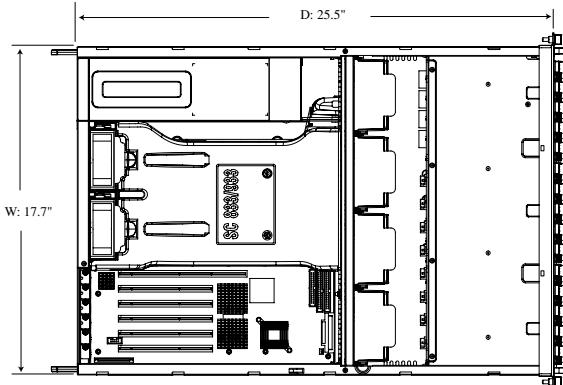

SC933S2-R760/SC933S1-R760

Mechanical Drawing

100% cooling redundancy

Beige/Black

Features

100% cooling redundancy, supports up to 15 hot-swap SAS/SATA drives, 760W triple redundant power supply & 6 hot-plug redundant cooling fans

Specifications

Form Factor	3U chassis support for max. motherboard size - 12" x 13" E-ATX
CPU support	Dual Xeon, Pentium D & Pentium 4
Expansion	6 expansion slots
Peripheral Drives	SC933S2-R760/SC933S1-R760: front side USB, 1 COM port & 1 x 2.5" SATA hot-swap bay
Drive Bays	SC933S2-R760: 14 x 3.5" dual-channel (7+7) hot-swap SCA drive bays with SAF-TE compliant SC933S1-R760: 14 x 3.5" hot-swap SCA drive bays with SAF-TE compliant SC933T-R760: 15 x 3.5" hot-swap SAS/SATA drive bays SC933E2-R760: 15 x 3.5" hot-swap SAS/SATA drive bays with SES2 (2 expanders for dual-port support) SC933E1-R760: 15 x 3.5" hot-swap SAS/SATA drive bays with SES2 (1 expander for single-port support)
Cooling System	4 x 9cm hot-swap cooling fans, 2 x 8cm exhaust fans & air-shroud
Front Panel LEDs	Power LED, network activity LED, system overheat LED & power fail LED
Front Panel Buttons	Power On/Off button, system reset button & mute button
Power supply	760W + 380W triple-redundant power supply w/I ² C built-in & fan speed control
Dimensions	W x H x D: 17.7" (450mm) x 5.2" (132mm) x 25.5" (648mm) Packing: 26.6" x 13.6" x 34.6"

2.5" SAS/SATA Mobile Rack

High performance, Scalability & Flexibility

For next generation enterprise server/storage solutions

Key Features

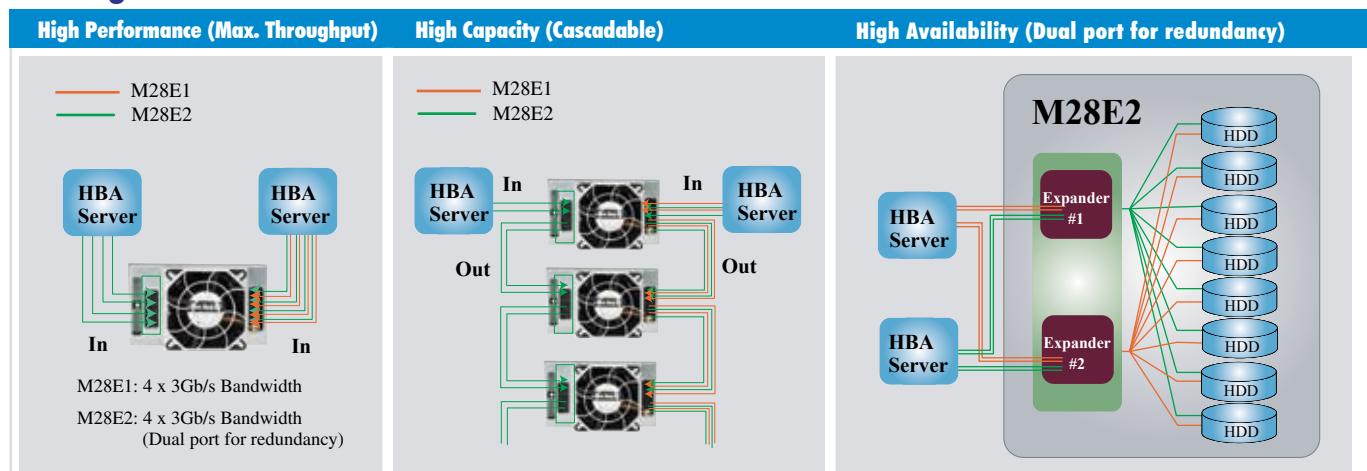

- ✓ 8 x 2.5" SFF hot-swappable SAS and SATA drive bays
- ✓ Supports 3 Gb/s SAS and SATA data transfer rates
- ✓ Universal connection-works w/ SAS and SATA drives
- ✓ Supports dual port SAS drives for redundancy
- ✓ Cascade up to 16 mobile racks
- ✓ 80mm exhaust fan for system cooling

Storage Adapters

All-in-One Zero-channel RAID Cards

Key RAID Features

- . RAID detection, buildup, delete, error detection
- . Background initialization
- . Hot-spare disk drive support for easy replacement
- . Hot-spare disk support with automatic rebuild
- . S.M.A.R.T support (AOC-LPZCR2 only)
- . Supports bootable arrays via jumper
- . Storage management utility
- . RAID configuration utility

Advantages

- . Support SAS, SATA and SCSI modes (interchangeable via jumper settings)
- . Utilize motherboard's existing SAS/SATA/SCSI host controller
- . Eliminate the need of a SAS/SATA/SCSI I/O chip on motherboard. Save on the cost of a regular RAID card
- . Offer high-speed throughput, scalability and space-saving/cost-effective hardware RAID solution

Server Remote Management

SIM (Supermicro Intelligent Management)

Featuring IPMI 2.0 Server Remote Management With KVM-Over-LAN

IPMI (Intelligent Platform Management Interface) is a hardware-level interface specification that defines a common, abstract message-based interface to platform monitoring and control functions. Providing peace of mind to the customers, SIM (Supermicro Intelligent Management) module implements IPMI 2.0 technology to provide remote access, monitoring and administration for Supermicro server platforms. With SIM, server administrators can view a server's hardware status remotely, receive an alarm automatically if a failure occurs, and power cycle a system that is non-responsive.

How does it work?

IPMI defines the protocols used for interfacing with an embedded service processor. This service processor is called Baseboard Management Controller (BMC) and resides on a server motherboard or in the chassis of a blade server or telecom platform. A BMC links to a main processor and other onboard elements via a simple serial bus.

What does it do?

Supermicro Intelligent Management (SIM) module monitors onboard instrumentation such as temperature sensors, power status, voltages and fan speed, and provides remote power control capabilities to reboot and/or reset the server. It also includes remote access to the BIOS configuration and operating system console information via SOL (Serial over LAN) or embedded KVM capabilities. Because the controller is a separate processor, the monitoring and control functions work regardless the CPU is operating or the system is powered on.

Anytime and Anywhere

An administrator accesses the BMC by using an IPMI-compliant management application loaded on a PC or via a web interface on a management appliance that includes IPMI management and KVM. The IPMI protocol leverages an out-of-band network (typically dedicated for server monitoring and management), which provides a flawless and secure path for mission-critical applications when regular in-band connectivity is lost or unresponsive. IPMI messages follow the same format whether they are received through an operating system or are sent and received out-of-band.

Additional features

SIM featuring the IPMI 2.0 specification supports Serial over LAN to redirect serial console functionality into IPMI over IP. Administrators can then gain full remote access to text-based system information and control for BIOS, utilities, operating systems and applications. IPMI 2.0 also offers major security enhancements. In summary, SIM includes the following key features.

- . Embedded microprocessor providing optional out-of-band KVM capabilities, extending the use of a single keyboard/monitor/mouse to the entire network.
- . Enhanced authentication support that provides stronger processes for establishing secure remote sessions and authenticating users.
- . Enhanced encryption support that allows for secure remote password configuration and protects sensitive system data when transferred over the network.
