
SERVICE MANUAL

COLOR MONITOR

AccuSync™ LCD72VM

MODEL ID LCD72VM-BK (Q)

This model has one type of LCD panel.

The LCD panel manufactured by Quanta (QDI): Brightness is 250cd/m².

The classification code of the serial number is [0, 1]: QDI Panel (Luminosity is 250cd/m²)

VERY IMPORTANT! Prior to servicing, confirm the classification code in the serial number of the unit.
For more details of the serial number, refer to "Serial Number Information".

1st Edition

NEC-MITSUBISHI ELECTRIC VISUAL SYSTEMS CORPORATION

SEPTEMBER 2004

WARNING

The SERVICE PERSONNEL should have the appropriate technical training, knowledge and experience necessary to:

- Be familiar with specialized test equipment, and
- Be careful to follow all safety procedures to minimize danger to themselves and their coworkers.

To avoid electrical shocks, this equipment should be used with an appropriate power cord.

This equipment utilized a micro-gap power switch. Turn off the set by first pushing power switch. Next, remove the power cord from the AC outlet.

To prevent fire or shock hazards, do not expose this unit to rain or moisture.

This symbol warns the personnel that un-insulated voltage within the unit may have sufficient magnitude to cause electric shock.

This symbol alerts the personnel that important literature concerning the operation and maintenance of this unit has been included.

Therefore, it should be read carefully in order to avoid any problems.

PRODUCT SAFETY CAUTION

1. When parts replacement is required for servicing, always use the manufacturer's specified replacement.
2. When replacing the component, always be certain that all the components are put back in the place.
3. As for a connector, pick and extract housing with fingers properly since a disconnection and improper contacts may occur, when wires of the connector are led.
4. Use a proper screwdriver. If you use screwdriver that does not fit, you may damage the screws.

Canadian Department of Communications Compliance Statement

- DOC: This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.
- C-UL: Bears the C-UL Mark and is in compliance with Canadian Safety Regulations according to CAN/CSA C22.2 No. 60950-1.

FCC Information

1. Use the attached specified cables with the AccuSync LCD52VM (L154F0), AccuSync LCD72VM (L174F1), or AccuSync LCD92VM (L194F2) color monitor so as not to interfere with radio and television reception.
 - (1) Please use the supplied power cord or equivalent to ensure FCC compliance.
 - (2) Please use the supplied shielded video signal cable.
Use of other cables and adapters may cause interference with radio and television reception.

2. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy, and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
 - Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult your dealer or an experienced radio/TV technician for help.

If necessary, the user should contact the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet, prepared by the Federal Communications Commission, helpful: "How to Identify and Resolve Radio-TV Interference Problems." This booklet is available from the U.S. Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4.

Contents

Your new NEC AccuSync LCD monitor box* should contain the following:

- AccuSync LCD Monitor
- Audio Cable
- User's Manual
- Cable Holder
- Video Signal Cable
- Power Cord
- Base Stand

Power Cord

Video Signal Cable

Audio Cable

User's Manual

AccuSync LCD monitor
(stand not connected)

Cable Holder

* Remember to save your original box and packing material to transport or ship the monitor.

Quick Start

To attach the Base to the LCD Stand:

1. Insert the front of the LCD Stand into the holes in the front of the Base (**Figure 1**).
2. Next, position the locking tabs on the back side of the LCD Stand with the holes on the Base. Lower the Stand until locking tabs are secure.
3. Attach the clip into the base (**Figure 2**).

To attach the AccuSync LCD monitor to your system, follow these instructions:

1. Turn off the power to your computer.
2. For the PC with Analog output: Connect the 15-pin mini D-SUB signal cable to the connector of the display card in your system (**Figure A.1**). Tighten all screws.
For the MAC: Connect the AccuSync Macintosh cable adapter to the computer, then attach the 15-pin mini D-SUB signal cable to the AccuSync Macintosh cable adapter (**Figure A.2**). Tighten all screws.

NOTE: To obtain the AccuSync Macintosh cable adapter, call NEC-Mitsubishi Electronics Display of America, Inc. at (800) 632-4662.

3. Connect the 15-pin mini D-SUB of the video signal cable to the appropriate connector on the back of the monitor (**Figure B.1**). Connect the audio cable to AUDIO-INPUT on the back of the monitor and the other end to the "Audio out" terminal of the computer. Headphones may be connected to the "Headphones" output on the front of the monitor "G". While the headphones are connected, the sound from the speakers will be disabled. Headphones can be purchased from your local electronics store.
4. Connect one end of the power cord to the LCD and the other end to the power outlet. Place the video signal cable, power cord and audio cable between the cable holder (**Figure B.1**).

NOTE: Adjust the position of cables between the holder to avoid damage.

NOTE: If you use this monitor at AC125-240V, please refer to Recommended Use section of this manual for proper selection of power cord.

5. Turn on the monitor with the front power button and the computer. (**Figure C.1**)
6. No-touch Auto Adjust automatically adjusts the monitor to optimal settings upon initial setup for most timings. For further adjustments, use the following OSM® controls:

- Auto Adjust Contrast
- Auto Adjust

Refer to the Controls section of this User's Manual for a full description of these OSM controls.

NOTE: For download information on the Windows® 95/98/Me/2000/XP INF file for your AccuSync monitor, refer to the **References** section of this User's Manual.

NOTE: If you have any problems, please refer to the **Troubleshooting** section of this User's Manual.

Quick Start *-continued*

Figure A.1

Macintosh Cable Adapter
(not included)

Figure A.2

Note: Some Macintosh systems do not require a Macintosh Cable Adapter

Figure B.1

Figure C.1

Power button

Quick Start *–continued*

Tilt

Grasp both sides of the monitor screen with your hands and adjust the tilt as desired (**Figure TS.1**).

NOTE: Handle with care when tilting the monitor screen.

Figure TS.1

Remove Monitor Stand for Mounting

To prepare the monitor for alternate mounting purposes:

1. Disconnect all cables.
2. Place monitor face down on a nonabrasive surface (**Figure R.1**).
3. Remove the 4 screws connecting the monitor to the stand and slide the stand off from the LCD (**Figure R.2**).

The monitor is now ready for mounting in an alternate manner.

4. Connect the AC cord and signal cable to the back of the monitor (**Figure R.3**).
5. Reverse this process to reattach stand.

NOTE: Use only VESA-compatible alternative mounting method.

NOTE: Handle with care when removing monitor stand.

Figure R.1

Figure R.2

5

Quick Start *-continued*

Removing the Base

Note: Always remove the Base when shipping the LCD.

1. Place monitor face down on a non-abrasive surface.
2. While using your thumbs, press the tabs in the direction of the arrows to unlock the stand.
3. Pull the unlocked base off the stand.

Connecting a Flexible Arm

This LCD monitor is designed for use with a flexible arm. Please use the attached screws (4pcs) as shown in the picture when installing.

To meet the safety requirements, the monitor must be mounted to an arm which guaranties the necessary stability under consideration of the weight of the monitor. The LCD monitor should only be used with an approved arm (e.g. GS mark).

Specifications

4-SCREWS (M4)
(MAX depth: 8.5 mm)

If using other screws,
check depth of holes.

Weight of LCD assembly:
2.9 kg - LCD52VM (MAX)
4.3 kg - LCD72VM (MAX)
5.5 kg - LCD92VM (MAX)

Controls

OSM® (On-Screen Manager) control buttons on the front of the monitor function as follows:

1. Basic key function

Button	SELECT	-	+	AUTO / RESET
OSM Off	OSM displayed	Shortcut to bright adjust window	Shortcut to volume adjust window	"Auto adjust" function
OSM On (Icon selection stage)	Moves to Adjustment stage	Cursor moves left	Cursor moves right	
OSM On (Adjustment stage)	Moves to Icon selection stage	Adjust value decrease or Cursor for adjust moves left	Adjust value increase or Cursor for adjust moves right	Reset operation Mute off/on Volume adjustment window

2. OSM Structure

Controls *–continued*

AUDIO

Control the sound volume of speakers and headphone.
To mute the speaker sound, press the AUTO/RESET key.

BRIGHTNESS

Adjusts the overall image and background screen brightness.

CONTRAST

Adjusts the image brightness in relation to the background.

AUTO CONTRAST

Adjusts the image displayed for non-standard video inputs.

AUTO ADJUST

Automatically adjusts the Image Position, the H. Size and Fine setting.

LEFT/RIGHT

Controls Horizontal Image Position within the display area of the LCD.

DOWN/UP

Controls Vertical Image Position within the display area of the LCD.

H. SIZE

Adjusts the horizontal size by increasing or decreasing this setting.

FINE

Improves focus, clarity and image stability by increasing or decreasing this setting.

COLOR CONTROL SYSTEMS

Four color presets (9300/7500/6500/USER) select the desired color setting.

COLOR RED

Increase or decreases Red. The change will appear on screen.

COLOR GREEN

Increase or decreases Green. The change will appear on screen.

COLOR BLUE

Increase or decreases Blue. The change will appear on screen.

TOOL

Selecting TOOL allows you to get into the sub menu.

FACTORY PRESET

Selecting Factory Preset allows you to reset all OSM control settings back to the factory settings. The RESET button will need to be held down for several seconds to take effect. Individual settings can be reset by highlighting the control to be reset and pressing the RESET button.

Controls *-continued*

EXIT

Selecting EXIT allows you exit OSM menu/sub menu.

LANGUAGE

OSM control menus are available in seven languages.

OSM TURN OFF

The OSM control menu will stay on as long as it is in use. In the OSM Turn OFF submenu, you can select how long the monitor waits after the last touch of a button to shut off the OSM control menu. The preset choices are 10 - 120 seconds in 5 second intervals.

OSM LOCK OUT

This control completely locks out access to all OSM control functions without Brightness and Contrast. When attempting to activate OSM controls while in the Lock Out mode, a screen will appear indicating the OSM are locked out. To activate the OSM Lock Out function, press "AUTO/ RESET", then "+" key and hold down simultaneously. To deactivate the OSM Lock Out, press "AUTO/ RESET", then "+" key and hold down simultaneously.

RESOLUTION NOTIFIER

If ON is selected, a message will appear on the screen after 30 seconds, notifying you that the resolution is not at optimal resolution.

MONITOR INFO

Indicates the model and serial numbers of your monitor.

OSM® Warning: OSM Warning menus disappear with SELECT button.

NO SIGNAL: This function gives a warning when there is no signal present. After power is turned on or when there is a change of input signal or video is inactive, the **No Signal** window will appear.

RESOLUTION NOTIFIER: This function gives a warning of use with optimized resolution. After power is turned on or when there is a change of input signal or the video signal doesn't have proper resolution, the **Resolution Notifier** window will open. This function can be disabled in the TOOL menu.

OUT OF RANGE: This function gives a recommendation of the optimized resolution and refresh rate. After the power is turned on or there is a change of input signal or the video signal doesn't have proper timing, the **Out Of Range** menu will appear.

Recommended Use

Safety Precautions and Maintenance

FOR OPTIMUM PERFORMANCE, PLEASE NOTE THE FOLLOWING WHEN SETTING UP AND USING THE ACCUSYNC LCD COLOR MONITOR:

- **DO NOT OPEN THE MONITOR.** There are no user serviceable parts inside and opening or removing covers may expose you to dangerous shock hazards or other risks. Refer all servicing to qualified service personnel.
- Do not spill any liquids into the cabinet or use your monitor near water.
- Do not insert objects of any kind into the cabinet slots, as they may touch dangerous voltage points, which can be harmful or fatal or may cause electric shock, fire or equipment failure.
- Do not place any heavy objects on the power cord. Damage to the cord may cause shock or fire.
- Do not place this product on a sloping or unstable cart, stand or table, as the monitor may fall, causing serious damage to the monitor.
- When operating the AccuSync LCD monitor with its AC 125-240V power supply, use a power supply cord that matches the power supply voltage of the AC power outlet being used. The power supply cord you use must have been approved by and comply with the safety standards of your country. (Type H05VV-F should be used in Europe)
- In UK, use a BS-approved power cord with molded plug having a black (5A) fuse installed for use with this monitor. If a power cord is not supplied with this monitor, please contact your supplier.
- Do not place any objects onto the monitor and do not use the monitor outdoors.
- The inside of the fluorescent tube located within the LCD monitor contains mercury. Please follow the bylaws or rules of your municipality to dispose of the tube properly.
- Do not bend power cord.
- Do not use monitor in high temperature, humid, dusty, or oily areas.
- If glass is broken, handle with care.
- Do not cover vent on monitor.

Immediately unplug your monitor from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- When the power supply cord or plug is damaged.
 - If liquid has been spilled, or objects have fallen into the monitor.
 - If the monitor has been exposed to rain or water.
 - If the monitor has been dropped or the cabinet damaged.
 - If the monitor does not operate normally by following operating instructions.
 - If monitor or glass is broken, do not come in contact with the liquid crystal and handle with care.
- Allow adequate ventilation around the monitor so that heat can properly dissipate. Do not block ventilated openings or place the monitor near a radiator or other heat sources. Do not put anything on top of monitor.
 - The power cable connector is the primary means of detaching the system from the power supply. The monitor should be installed close to a power outlet which is easily accessible.
 - Handle with care when transporting. Save packaging for transporting.

CAUTION

Image Persistence

Image persistence is when a residual or "ghost" image of a previous image remains visible on the screen. Unlike CRT monitors, LCD monitors' image persistence is not permanent, but constant images being displayed for a long period of time should be avoided.

To alleviate image persistence, turn off the monitor for as long as the previous image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

NOTE: As with all personal display devices, NEC-Mitsubishi Electronics Display recommends using a moving screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

Recommended Use *–continued*

CORRECT PLACEMENT AND ADJUSTMENT OF THE MONITOR CAN REDUCE EYE, SHOULDER AND NECK FATIGUE. CHECK THE FOLLOWING WHEN YOU POSITION THE MONITOR:

- For optimum performance, allow 20 minutes for warm-up.
- Adjust the monitor height so that the top of the screen is at or slightly below eye level. Your eyes should look slightly downward when viewing the middle of the screen.
- Position your monitor no closer than 16 inches and no further away than 28 inches from your eyes. The optimal distance is 20 inches.
- Rest your eyes periodically by focusing on an object at least 20 feet away. Blink often.
- Position the monitor at a 90° angle to windows and other light sources to minimize glare and reflections. Adjust the monitor tilt so that ceiling lights do not reflect on your screen.
- If reflected light makes it hard for you to see your screen, use an antiglare filter.
- Clean the LCD monitor surface with a lint-free, nonabrasive cloth. Avoid using any cleaning solution or glass cleaner!
- Adjust the monitor's brightness and contrast controls to enhance readability.
- Use a document holder placed close to the screen.
- Position whatever you are looking at most of the time (the screen or reference material) directly in front of you to minimize turning your head while you are typing.
- Avoid displaying fixed patterns on the monitor for long periods of time to avoid image persistence (afterimage effects).
- Get regular eye checkups.

Ergonomics

To realize the maximum ergonomics benefits, we recommend the following:

- Use the preset Size and Position controls with standard signals
- Use the preset Color Setting
- Use non-interlaced signals with a vertical refresh rate between 60-75Hz
- Do not use primary color blue on a dark background, as it is difficult to see and may produce eye fatigue to insufficient contrast

For more detailed information on setting up a healthy work environment, write the American National Standard for Human Factors Engineering of Visual Display Terminal Workstations – ANSI-HFS Standard No. 100-1988 – The Human Factors Society, Inc. P.O. Box 1369, Santa Monica, California 90406.

Specifications

Monitor Specifications	AccuSync LCD52VM Monitor	Notes

Features

Reduced Footprint: Provides the ideal solution for environments requiring superior image quality but with size and weight limitations. The monitor's small footprint and low weight allow it to be moved or transported easily from one location to another.

AccuColor® Control Systems: Allows you to adjust the colors on your screen and customize the color accuracy of your monitor to a variety of standards.

OSM® (On-Screen Manager) Controls: Allow you to quickly and easily adjust all elements of your screen image via simple to use on-screen menus.

No-touch Auto Adjust™: No-touch Auto Adjust automatically adjusts the monitor to optimal settings upon initial setup.

ErgoDesign® Features: Enhance human ergonomics to improve the working environment, protect the health of the user and save money. Examples include OSM controls for quick and easy image adjustments, tilt base for preferred angle of vision, small footprint and compliance with MPRII and TCO guidelines for lower emissions.

Plug and Play: The Microsoft® solution with the Windows®95/98/Me/2000/XP operating system facilitates setup and installation by allowing the monitor to send its capabilities (such as screen size and resolutions supported) directly to your computer, automatically optimizing display performance.

IPM® (Intelligent Power Manager) System: Provides innovative power-saving methods that allow the monitor to shift to a lower power consumption level when on but not in use, saving two-thirds of your monitor energy costs, reducing emissions and lowering the air conditioning costs of the workplace.

Multiple Frequency Technology: Automatically adjusts monitor to the display card's scanning frequency, thus displaying the resolution required.

FullScan® Capability: Allows you to use the entire screen area in most resolutions, significantly expanding image size.

VESA® Standard Mounting Interface: Allows users to connect their AccuSync monitor to any VESA standard third party mounting arm or bracket. Allows for the monitor to be mounted on a wall or an arm using any third party compliant device.

OSM Display Screen Copyright 2004 by
NEC-Mitsubishi Electronics Display of America, Inc.

Troubleshooting

No picture

- The signal cable should be completely connected to the display card/computer.
- The display card should be completely seated in its slot.
- Front Power Switch and computer power switch should be in the ON position.
- Check to make sure that a supported mode has been selected on the display card or system being used. (Please consult display card or system manual to change graphics mode.)
- Check the monitor and your display card with respect to compatibility and recommended settings.
- Check the signal cable connector for bent or pushed-in pins.

Power Button does not respond

- Unplug the power cord of the monitor from the AC outlet to turn off and reset the monitor.

Image Persistence

- Image persistence is when a residual or "ghost" image of a previous image remains visible on the screen. Unlike CRT monitors, LCD monitors' image persistence is not permanent, but constant images being displayed for a long period of time should be avoided.

To alleviate image persistence, turn off the monitor for as long as the previous image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

NOTE: As with all personal display devices, NEC-Mitsubishi Electronics Display recommends using a moving screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

Image is unstable, unfocused or swimming is apparent

- Signal cable should be completely attached to the computer.
- Use the OSM Image Adjust controls to focus and adjust display by increasing or decreasing the FINE control. When the display mode is changed, the OSM Image Adjust settings may need to be readjusted.
- Check the monitor and your display card with respect to compatibility and recommended signal timings.
- If your text is garbled, change the video mode to non-interlace and use 60Hz refresh rate.

LED on monitor is not lit (*no green or amber color can be seen*)

- Power Switch should be in the ON position and power cord should be connected.

Display image is not sized properly

- Use the OSM Image Adjust controls to increase or decrease the H.SIZE.
- Check to make sure that a supported mode has been selected on the display card or system being used. (Please consult display card or system manual to change graphics mode.)

No Video

- If no video is present on the screen, turn the Power button off and on again.
- Make certain the computer is not in a power-saving mode (touch the keyboard or mouse).

No Sound

- Check to see if speaker cable is properly connected.
- Check to see if mute is activated.
- Check to see if volume in OSM is set at minimum.

Limited Warranty

NEC-Mitsubishi Electronics Display of America, Inc. (hereinafter "NMD-A") warrants this Product to be free from defects in material and workmanship and, subject to the conditions set forth below, agrees to repair or replace (at NMD-A's sole option) any part of the enclosed unit which proves defective for a period of three (3) years from the date of first consumer purchase. Spare parts are warranted for ninety (90) days. Replacement parts or unit may be new or refurbished and will meet specifications of the original parts or unit.

This warranty gives you specific legal rights and you may also have other rights, which vary from state to state. This warranty is limited to the original purchaser of the Product and is not transferable. This warranty covers only NMD-A-supplied components. Service required as a result of third party components is not covered under this warranty. In order to be covered under this warranty, the Product must have been purchased in the U.S.A. or Canada by the original purchaser. This warranty only covers Product distribution in the U.S.A. or Canada by NMD-A. No warranty service is provided outside of the U.S.A. or Canada. Proof of Purchase will be required by NMD-A to substantiate date of purchase. Such proof of purchase must be an original bill of sale or receipt containing name and address of seller, purchaser, and the serial number of the product.

It shall be your obligation and expense to have the Product shipped, freight prepaid, or delivered to the authorized reseller from whom it was purchased or other facility authorized by NMD-A to render the services provided hereunder in either the original package or a similar package affording an equal degree of protection. All Products returned to NMD-A for service MUST have prior approval, which may be obtained by calling 1-800-632-4662. The Product shall not have been previously altered, repaired, or serviced by anyone other than a service facility authorized by NMD-A to render such service, the serial number of the product shall not have been altered or removed. In order to be covered by this warranty the Product shall not have been subjected to displaying of fixed images for long periods of time resulting in image persistence (afterimage effects), accident, misuse or abuse or operated contrary to the instructions contained in the User's Manual. Any such conditions will void this warranty.

NMD-A SHALL NOT BE LIABLE FOR DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL, OR OTHER TYPES OF DAMAGES RESULTING FROM THE USE OF ANY NMD-A PRODUCT OTHER THAN THE LIABILITY STATED ABOVE. THESE WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SOME STATES DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES OR THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES SO THE ABOVE EXCLUSIONS OR LIMITATIONS MAY NOT APPLY TO YOU.

This Product is warranted in accordance with the terms of this limited warranty. Consumers are cautioned that Product performance is affected by system configuration, software, the application, customer data, and operator control of the system, among other factors. While NMD-A Products are considered to be compatible with many systems, specific functional implementation by the customers of the Product may vary. Therefore, suitability of a Product for a specific purpose or application must be determined by consumer and is not warranted by NMD-A.

For the name of your nearest authorized NEC-Mitsubishi Electronics Display service facility, contact NEC-Mitsubishi Electronics Display of America at 1-800-632-4662.

TCO'99

Congratulations! You have just purchased a TCO'99 approved and labelled product! Your choice has provided you with a product developed for professional use. Your purchase has also contributed to reducing the burden on the environment and also to the further development of environmentally adapted electronics products.

Why do we have environmentally labelled computers?

In many countries, environmental labelling has become an established method for encouraging the adaptation of goods and services to the environment. The main problem, as far as computers and other electronics equipment are concerned, is that environmentally harmful substances are used both in the products and during the manufacturing. Since it has not been possible for the majority of electronics equipment to be recycled in a satisfactory way, most of these potentially damaging substances sooner or later enter Nature.

There are also other characteristics of a computer, such as energy consumption levels, that are important from the viewpoints of both the work (Internal) and natural (external) environments. Since all methods of conventional electricity generation have a negative effect on the environment (acidic and climate-influencing emissions, radioactive waste, etc.), it is vital to conserve energy. Electronics equipment in offices consume an enormous amount of energy since they are often left running continuously.

What does labelling involve?

This product meets the requirements for the TCO'99 scheme which provides for international and environmental labelling of personal computers. The labelling scheme was developed as a joint effort by the TCO (The Swedish Confederation of Professional Employees), Svenska Naturskyddsforeningen (The Swedish Society for Nature Conservation) and Statens Energimyndighet (The Swedish National Energy Administration).

The requirements cover a wide range of issues: environment, ergonomics, usability, emission of electrical and magnetic fields, energy consumption and electrical and fire safety.

The environmental demands concern restrictions on the presence and use of heavy metals, brominated and chlorinated flame retardants, CFCs (freons) and chlorinated solvents, among other things. The product must be prepared for recycling and the manufacturer is obliged to have an environmental plan which must be adhered to in each country where the company implements its operational policy. The energy requirements include a demand that the computer and/or display, after a certain period of inactivity, shall reduce its power consumption to a lower level in one or more stages. The length of time to reactivate the computer shall be reasonable for the user.

Labelled products must meet strict environmental demands, for example, in respect of the reduction of electric and magnetic fields, physical and visual ergonomics and good usability.

Environmental Requirements

Flame retardants

Flame retardants are present in printed circuit boards, cables, wires, casings and housings. In turn, they delay the spread of fire. Up to thirty percent of the plastic in a computer casing can consist of flame retardant substances. Most flame retardants contain bromine or chloride and these are related to another group of environmental toxins, PCBs, which are suspected to give rise to severe health effects, including reproductive damage in fish-eating birds and mammals, due to the bio-

TCO'99 –continued

accumulative* processes. Flame retardants have been found in human blood and researchers fear that disturbances in fetus development may occur.

TCO'99 demand requires that plastic components weighing more than 25 grams must not contain flame retardants with organically bound chlorine and bromine. Flame retardants are allowed in the printed circuit boards since no substitutes are available.

Lead**

Lead can be found in picture tubes, display screens, solders and capacitors. Lead damages the nervous system and in higher doses, causes lead poisoning.

TCO'99 requirement permits the inclusion of lead since no replacement has yet been developed.

Cadmium**

Cadmium is present in rechargeable batteries and in the color generating layers of certain computer displays. Cadmium damages the nervous system and is toxic in high doses.

TCO'99 requirement states that batteries, the color generating layers of display screens and the electrical or electronics components must not contain any cadmium.

Mercury**

Mercury is sometimes found in batteries, relays and switches, Mercury damages the nervous system and is toxic in high doses.

TCO'99 requirement states that batteries may not contain any Mercury. It also demands that no mercury is present in any of the electrical or electronics components associated with the display unit.

CFCs (freons)

CFCs (freons) are sometimes used for washing printed circuit boards. CFCs break down ozone and thereby damage the ozone layer in the stratosphere, causing increased reception on Earth of ultraviolet light with consequent increased risks of skin cancer (malignant melanoma).

The relevant TCO'99 requirement; Neither CFCs nor HCFCs may be used during the manufacturing and assembly of the product or its packaging.

*Bio-accumulative is defined as substances which accumulate within living organisms.

**Lead, Cadmium and Mercury are heavy metals which are Bio-accumulative.

PROPRIETARY NOTICE AND LIABILITY DISCLAIMER

The information disclosed in this document, including all designs and related materials, is the valuable property of NEC-Mitsubishi Electronics Display of America and/or its licensors, as appropriate, reserve all patent, copyright and other proprietary rights to this document, including all design, manufacturing, reproduction, use and sales rights thereto, except to the extent said rights are expressly granted to others.

The NEC-Mitsubishi Electronics Display of America product(s) discussed in this document are warranted in accordance with the terms of the Limited Warranty Statement accompanying each product. However, actual performance of each such product is dependent upon factors such as system configuration, customer data and operator control. Since implementation by customers of each product may vary, the suitability of specific product configurations and applications must be determined by the customer and is not warranted by NEC-Mitsubishi Electronics Display of America.

To allow for design and specification improvements, the information in this document is subject to change at any time without notice. Reproduction of this document or portions thereof without prior approval of NEC-Mitsubishi Electronics Display of America is prohibited.

DECLARATION OF CONFORMITY

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions. (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

U.S. Responsible Party:	NEC-Mitsubishi Electronics Display of America, Inc.
Address:	500 Park Blvd, Suite 1100
	Itasca, Illinois 60143-1248
Tel. No.:	(630) 467-3000

Type of Product:	Display Monitor
Equipment Classification:	Class B Peripheral
Model:	AccuSync LCD52VM (L1 54F0) / LCD72VM (L174F1)/LCD92VM (L194F2)

We hereby declare that the equipment specified above conforms to the technical standards as specified in the FCC Rules.

**WARNING**

TO PREVENT FIRE OR SHOCK HAZARDS, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE. ALSO, DO NOT USE THIS UNIT'S POLARIZED PLUG WITH AN EXTENSION CORD RECEPTACLE OR OTHER OUTLETS UNLESS THE PRONGS CAN BE FULLY INSERTED.

REFRAIN FROM OPENING THE CABINET AS THERE ARE HIGH VOLTAGE COMPONENTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

**CAUTION:**

TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

This symbol warns user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any part inside this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

Caution:

When operating the AccuSync LCD52VM/AccuSync LCD72VM/AccuSync LCD92VM with a 220-240V AC power source in Europe, use the power cord provided with the monitor.

In the UK, a BS approved power cord with a moulded plug has a Black (five Amps) fuse installed for use with this equipment. If a power cord is not supplied with this equipment please contact your supplier.

For all other cases, use a power cord that matches the AC voltage of the power outlet and has been approved by and complies with the safety standard of your particular country.

For the Customer to use in U.S.A. or Canada

Canadian Department of Communications Compliance Statement

DOC: This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

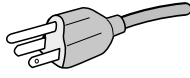

Cet appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouiller du Canada.

C-UL: Bears the C-UL Mark and is in compliance with Canadian Safety Regulations according to CSA C22.2 No. 60950-1.

Ce produit porte la marque 'C-UL' et se conforme aux règlements de sûreté Canadiens selon CAN/CSA C22.2 No. 60950-1.

FCC Information

- Use the attached specified cables with the AccuSync LCD52VM/AccuSync LCD72VM/AccuSync LCD92VM colour monitor so as not to interfere with radio and television reception.
 - The power supply cord you use must have been approved by and comply with the safety standards of U.S.A., and meet the following condition.

Power supply cord	Non shield type, 3-conductor
Length	1.8 m
Plug shape	
	U.S.A

- Please use the supplied shielded video signal cable. Use of other cables and adapters may cause interference with radio and television reception.
- This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy, and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
 - Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult your dealer or an experienced radio/TV technician for help.

If necessary, the user should contact the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet, prepared by the Federal Communications Commission, helpful: "How to Identify and Resolve Radio-TV Interference Problems." This booklet is available from the U.S. Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4.

Declaration of Conformity

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions. (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Contents

Your new NEC AccuSync LCD monitor box* should contain the following:

- AccuSync LCD monitor with tilt base
- Audio Cable
- Power Cord
- Video Signal Cable
- User's Manual
- CD-ROM
- Base Stand
- Cable Holder

User's Manual

Audio Cable

Power Cord

Video Signal Cable

Cable Holder

CD-ROM

Base Stand

AccuSync LCD monitor
(base stand not connected)

* Remember to save your original box and packing material to transport or ship the monitor.

Quick Start

To attach the Base to the LCD Stand:

1. Insert the front of the LCD stand into the holes in the front of the Base (**Figure S.1**).
2. Next, position the locking tabs on the back side of the LCD stand with the holes on the Base. Lower the Stand in place until locking tabs are secure (**Figure S.1**).

To attach the Cable Holder:

1. Insert the tabs of Cable Holder into the hole of Stand neck (**Figure S.1**).

NOTE: Please confirm that the tabs are completely secure.

Figure S.1

Figure A.1

Macintosh Cable
Adapter (not included)

Figure A.2

To attach the AccuSync LCD monitor to your system, follow these instructions:

1. Turn off the power to your computer.
2. **For the PC with Analog output:** Connect the 15-pin mini D-SUB signal cable to the connector of the display card in your system (**Figure A.1**). Tighten all screws.

For the Mac: Connect the MultiSync Macintosh cable adapter (not included) to the computer. Attach the 15-pin mini D-SUB signal cable to the MultiSync Macintosh cable adapter (**Figure A.2**). Tighten all screws.

NOTE: Some Macintosh systems do not require a Macintosh cable adapter.

3. Connect the 15-pin mini D-SUB of the video signal cable and Audio Cable to the appropriate connector on the back of the monitor (**Figure B.1**). Connect the Headphone (not included) to the appropriate connector at the front of the monitor (**Figure C.1**).
4. Connect one end of the power cord to the monitor and the other end to the power outlet. Place the Video Signal Cable and power cord to the Cable holder (**Figure B.1**).

NOTE: Adjust position of cable that place under the Cable holder to avoid damage for cable or monitor.

NOTE: Please refer to Caution section of this manual for proper selection of power cord.

5. Turn on the monitor with the front power button and the computer (**Figure C.1**).

Figure B.1

Figure C.1

6. No-touch Auto Adjust automatically adjusts the monitor to optimal settings upon initial setup for most timings. For further adjustments, use the following OSM controls:

- Auto Adjust Contrast
- Auto Adjust

Refer to the **Controls** section of this User's Manual for a full description of these OSM controls.

NOTE: If you have any problem, please refer to the **Troubleshooting** section of this User's Manual.

Tilt

Grasp both sides of the monitor screen with your hands and adjust the tilt as desired (**Figure TS.1**).

Figure TS.1

Remove Monitor Stand for Mounting

To prepare the monitor for alternative mounting purposes:

1. Disconnect all cables.
2. Place monitor face down on a non-abrasive surface (**Figure R.1**).
3. Remove the 4 screws connecting the monitor to the stand and remove the stand as indicated (**Figure R.2**). The monitor is now ready for mounting in an alternative manner.
4. Connect the AC cord and signal cable to the back of the monitor (**Figure R.3**).
5. Reverse this process to re-attach stand.

NOTE: Use only VESA-compatible alternative mounting method.

NOTE: Handle with care when removing monitor stand.

Figure R.1

Figure R.2

Figure R.3

Removing the Base

NOTE: Always remove the Base when shipping the LCD.

1. Place monitor face down on a non-abrasive surface (Figure R.1).
2. While using your thumbs, press the bottom tabs upward to unlock.
3. Press the top tabs down to unlock and pull off the stand.

Connecting a Flexible Arm

This LCD monitor is designed for use with a flexible arm.

Please use the attached screws (4pcs) as shown in the picture when installing. To meet the safety requirements, the monitor must be mounted to an arm which guaranties the necessary stability under consideration of the weight of the monitor.

The LCD monitor shall only be used with an approved arm (e.g. GS mark).

Specifications

4-SCREWS (M4)
(MAX depth: 8.5 mm)
If use other screw, check depth of hole.

Weight of LCD assembly: 2.9 kg - LCD52VM (MAX)
4.3 kg - LCD72VM (MAX)
5.5 kg - LCD92VM (MAX)

Controls

OSM (On-Screen Manager) control buttons on the front of the monitor function as follows:

1. Basic function at pressing each key

Button	SELECT	-	+	AUTO / RESET
At No OSD showing	Showing OSM.	Shortcut to Bright adjust window.	Shortcut to Volume adjust window.	"Auto adjust" operate.
At OSD showing (Icon selection stage)	Go to Adjustment stage.	Cursor goes to left.	Cursor goes to right.	
At OSD showing (Adjustment stage)	Go to Icon selection stage.	Adjust value decrease or Cursor for adjust goes to left.	Adjust value increase or Cursor for adjust goes to right.	Reset operation. Mute off/on switch on Volume adjustment window.

2. OSM structure

Example Tool:

**AUDIO**

Audio volume icon is chosen, depending on the volume condition (AUTO/RESET).

**BRIGHTNESS**

Adjusts the overall image and background screen brightness.

**CONTRAST**

Adjusts the image brightness in relation to the background.

**AUTO CONTRAST**

Adjusts the image displayed for non-standard video inputs.

**AUTO ADJUST**

Automatically adjusts the Image Position, the H. Size and Fine setting.

**LEFT/RIGHT**

Controls Horizontal Image Position within the display area of the LCD.

**DOWN/UP**

Controls Vertical Image Position within the display area of the LCD.

**H. SIZE**

Adjusts the horizontal size by increasing or decreasing this setting.

**FINE**

Improves focus, clarity and image stability by increasing or decreasing this setting.

**COLOUR CONTROL SYSTEMS**

Four colour presets (9300/7500/6500/USER) select the desired colour setting.

**COLOUR RED**

Increase or decreases Red. The change will appear on screen.

**COLOUR GREEN**

Increase or decreases Green. The change will appear on screen.

**COLOUR BLUE**

Increase or decreases Blue. The change will appear on screen.

**TOOL**

Selecting TOOL allows you to get into the sub menu.

**FACTORY PRESET**

Selecting Factory Preset allows you to reset all OSM control settings back to the factory settings. The RESET button will need to be held down for several seconds to take effect. Individual settings can be reset by highlighting the control to be reset and pressing the RESET button.

**EXIT**

Selecting EXIT allows you exit OSM menu/ sub menu.

**LANGUAGE**

OSM control menus are available in seven languages.

**OSM TURN OFF**

The OSM control menu will stay on as long as it is in use. In the OSM Turn OFF submenu, you can select how long the monitor waits after the last touch of a button to shut off the OSM control menu. The preset choices are 10 - 120 seconds by 5 seconds step.

OSM LOCK OUT

This control completely locks out access to all OSM control functions without Brightness and Contrast. When attempting to activate OSM controls while in the Lock Out mode, a screen will appear indicating the OSM are locked out. To activate the OSM Lock Out function, press "AUTO/ RESET", then "+" key and hold down simultaneously. To de-activate the OSM Lock Out, press "AUTO/ RESET", then "+" key and hold down simultaneously.

RESOLUTION NOTIFIER

If ON is selected, a message will appear on the screen after 30 seconds, notifying you that the resolution is not at optimal resolution.

MONITOR INFO

Indicates the model and serial numbers of your monitor.

OSM Warning

OSM Warning menus disappear with Exit button.

NO SIGNAL: This function gives a warning when there is no signal present. After power is turned on or when there is a change of input signal or video is inactive, the **No Signal** window will appear.

RESOLUTION NOTIFIER: This function gives a warning of use with optimized resolution. After power is turned on or when there is a change of input signal or the video signal doesn't have proper resolution, the **Resolution Notifier** window will open. This function can be disabled in the TOOL menu.

OUT OF RANGE: This function gives a recommendation of the optimized resolution and refresh rate. After the power is turned on or there is a change of input signal or the video signal doesn't have proper timing, the **Out Of Range** menu will appear.

Recommended use

Safety Precautions and Maintenance

FOR OPTIMUM PERFORMANCE, PLEASE NOTE
THE FOLLOWING WHEN SETTING UP AND
USING THE ACCUSYNC LCD COLOUR MONITOR:

- **DO NOT OPEN THE MONITOR.** There are no user serviceable parts inside and opening or removing covers may expose you to dangerous shock hazards or other risks. Refer all servicing to qualified service personnel.
- Do not spill any liquids into the cabinet or use your monitor near water.
- Do not insert objects of any kind into the cabinet slots, as they may touch dangerous voltage points, which can be harmful or fatal or may cause electric shock, fire or equipment failure.
- Do not place any heavy objects on the power cord. Damage to the cord may cause shock or fire.
- Do not place this product on a sloping or unstable cart, stand or table, as the monitor may fall, causing serious damage to the monitor.
- When operating the LCD monitor with its AC 125-240V power supply, use a power supply cord that matches the power supply voltage of the AC power outlet being used. The power supply cord you use must have been approved by and comply with the safety standards of your country. (Type H05VV-F should be used in Europe).
- In U.K, use a BS-approved power cord with molded plug having a black (5A) fuse installed for use with this monitor. If a power cord is not supplied with this monitor, please contact your supplier.
- Do not place any objects onto the monitor and do not use the monitor outdoors.
- The inside of the fluorescent tube located within the LCD monitor contains mercury. Please follow the bylaws or rules of your municipality to dispose of the tube properly.
- Do not bend power cord.
- Do not use monitor in high temperature, humid, dusty, or oily areas.
- Do not cover vent on monitor.

Immediately unplug your monitor from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- When the power supply cord or plug is damaged.
- If liquid has been spilled, or objects have fallen into the monitor.
- If the monitor has been exposed to rain or water.
- If the monitor has been dropped or the cabinet damaged.
- If the monitor does not operate normally by following operating instructions.
- If monitor is broken, do not come in contact with the liquid crystal and handle with care.

CAUTION

- Allow adequate ventilation around the monitor so that heat can properly dissipate. Do not block ventilated openings or place the monitor near a radiator or other heat sources. Do not put anything on top of monitor.
- The power cable connector is the primary means of detaching the system from the power supply. The monitor should be installed close to a power outlet, which is easily accessible.
- Handle with care when transporting. Save packaging for transporting.
- **Image Persistence:** Image persistence is when a residual or "ghost" image of a previous image remains visible on the screen. Unlike CRT monitors, LCD monitors' image persistence is not permanent, but constant images being displayed for a long period of time should be avoided.
To alleviate image persistence, turn off the monitor for as long as the previous image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

NOTE: As with all personal display devices, NEC-Mitsubishi Electronics Display-Europe recommends using a moving screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

CORRECT PLACEMENT AND ADJUSTMENT OF THE MONITOR CAN REDUCE EYE, SHOULDER AND NECK FATIGUE. CHECK THE FOLLOWING WHEN YOU POSITION THE MONITOR:

- For optimum performance, allow 20 minutes for warm-up.
- Adjust the monitor height so that the top of the screen is at or slightly below eye level. Your eyes should look slightly downward when viewing the middle of the screen.
- Position your monitor no closer than 40 cm and no further away than 70 cm from your eyes. The optimal distance is 50 cm.
- Rest your eyes periodically by focusing on an object at least 6 m away. Blink often.
- Position the monitor at a 90° angle to windows and other light sources to minimize glare and reflections. Adjust the monitor tilt so that ceiling lights do not reflect on your screen.
- If reflected light makes it hard for you to see your screen, use an antiglare filter.
- Clean the LCD monitor surface with a lint-free, non-abrasive cloth. Avoid using any cleaning solution or glass cleaner!
- Adjust the monitor's brightness and contrast controls to enhance readability.
- Use a document holder placed close to the screen.
- Position whatever you are looking at most of the time (the screen or reference material) directly in front of you to minimize turning your head while you are typing.
- Avoid displaying fixed patterns on the monitor for long periods of time to avoid image persistence (after-image effects).
- Get regular eye checkups.

Ergonomics

To realize the maximum ergonomics benefits, we recommend the following:

- Use the preset Size and Position controls with standard signals.
- Use the preset Colour Setting.
- Use non-interlaced signals with a vertical refresh rate between 60-75 Hz.
- Do not use primary colour blue on a dark background, as it is difficult to see and may produce eye fatigue to insufficient contrast.

Specifications AccuSync LCD52VM Monitor

Monitor Specifications		AccuSync LCD52VM Monitor	Notes
LCD Module	Diagonal: Viewable Image Size: Native Resolution (Pixel Count):	38 cm/15 inches 38 cm/15 inches 1024 x 768	Active matrix; thin film transistor (TFT) liquid crystal display (LCD); 0.297 mm dot pitch; 250 cd/m ² white luminance, 400:1 contrast ratio, typical.
Input Signal	Video: Sync:	ANALOG 0.7 Vp-p/75 Ohms Separate sync.TTL Level (Positive/Negative) Horizontal sync. Positive/Negative Vertical sync. Positive/Negative	
Display Colours	Analog input:	16,2 M	Depends on display card used.
Synchronization Range	Horizontal: Vertical:	31.5 kHz to 61 kHz 55 Hz to 76 Hz	Automatically Automatically
Viewing Angle	Left/Right: Up/Down:	-60°/+60°(CR>10) -45°/+45°(CR>10)	
Resolutions Supported	Landscape:	720 x 400*1 : VGA 640 x 480*1 @ 60 Hz to 75 Hz 800 x 600*1 @ 56 Hz to 75 Hz 832 x 624*1 @ 75 Hz 1024 x 768 @ 60 Hz to 75 Hz.....	Some systems may not support all modes listed. NEC-Mitsubishi Electronics Display cites recommended resolution at 75 Hz for optimal display performance.
Active Display Area	Horizontal: Vertical:	304.1 mm 228.1 mm	
Speakers	Practical Audio Output:	1.0 W + 1.0 W	
Power Supply		100 - 240 V ~ 50/60 Hz	
Power Consumption		23 W	
Dimensions	Landscape:	344.6 mm (W) x 352.7 mm (H) x 165.0 mm (D) (with stand) 344.6 mm (W) x 285.0 mm (H) x 57.5 mm (D) (without stand)	
Weight		3.3 kg	
Environmental Considerations	Operating Temperature: Humidity: Altitude: Storage Temperature: Humidity: Altitude:	5 °C to 35 °C 30% to 80% 0 to 3,048 m -10 °C to +60 °C 10% to 85% 0 to 12,192 m	

*1 Interpolated Resolutions: When resolutions are shown that are lower than the pixel count of the LCD module, text may appear different. This is normal and necessary for all current flat panel technologies when displaying non-native resolutions full screen. In flat panel technologies, each dot on the screen is actually one pixel, so to expand resolutions to full screen, an interpolation of the resolution must be done.

NOTE: Technical specifications are subject to change without notice.

Features

Reduced Footprint: Provides the ideal solution for environments requiring superior image quality but with size and weight limitations. The small footprint and low weight allow it to be moved or transported easily from one location to another.

AccuColor Control Systems: Allows you to adjust the colours on your screen and customize the colour accuracy of your monitor to a variety of standards.

OSM (On-Screen Manager) Controls: Allow you to quickly and easily adjust all elements of your screen image via simple to use on-screen menus.

No-touch Auto Adjust: No-touch Auto Adjust automatically adjusts the monitor to optimal settings upon initial setup.

ErgoDesign Features: Enhance human ergonomics to improve the working environment, protect the health of the user and save money. Examples include OSM controls for quick and easy image adjustments, tilt base for preferred angle of vision, small footprint and compliance with MPRII and TCO guidelines for lower emissions.

Plug and Play: The Microsoft solution with the Windows 95/98/Me/2000/XP operating system facilitates setup and installation by allowing the monitor to send its capabilities (such as screen size and resolutions supported) directly to your computer, automatically optimizing display performance.

IPM (Intelligent Power Manager) System: Provides innovative power-saving methods that allow the monitor to shift to a lower power consumption level when on but not in use, saving two-thirds of your monitor energy costs, reducing emissions and lowering the air conditioning costs of the workplace.

Multiple Frequency Technology: Automatically adjusts monitor to the display card's scanning frequency, thus displaying the resolution required.

FullScan Capability: Allows you to use the entire screen area in most resolutions, significantly expanding image size.

VESA Standard Mounting Interface: Allows users to connect their AccuSync monitor to any VESA standard third party mounting arm or bracket. Allows for the monitor to be mounted on a wall or an arm using any third party compliant device.

Troubleshooting

No picture

- The signal cable should be completely connected to the display card/computer.
- The display card should be completely seated in its slot.
- Check front power Switch and computer power switch should be in the ON position.
- Check to make sure that a supported mode has been selected on the display card or system being used. (Please consult display card or system manual to change graphics mode.)
- Check the monitor and your display card with respect to compatibility and recommended settings.
- Check the signal cable connector for bent or pushed-in pins.
- Check the signal input.

Power Button does not respond

- Unplug the power cord of the monitor from the AC outlet to turn off and reset the monitor.

Image persistence

- Image persistence is when a “ghost” of an image remains on the screen even after the monitor has been turned off. Unlike CRT monitors, LCD monitors’ image persistence is not permanent, but constant images being displayed for a long period of time should be avoided.
To alleviate image persistence, turn the monitor off for as long as an image was displayed. For example, if an image was on the monitor for one hour and a residual image remains, the monitor should be turned off for one hour to erase the image.

NOTE: As with all personal display devices, NEC-Mitsubishi Electronics Displays recommends using a screen saver at regular intervals whenever the screen is idle or turning off the monitor when not in use.

Image is unstable, unfocused or swimming is apparent

- Signal cable should be completely attached to the computer.
- Use the OSM Image Adjust controls to focus and adjust display by increasing or decreasing the fine total. When the display mode is changed, the OSM Image Adjust settings may need to be re-adjusted.
- Check the monitor and your display card with respect to compatibility and recommended signal timings.
- If your text is garbled, change the video mode to non-interlace and use 60 Hz refresh rate.

LED on monitor is not lit (no green or amber colour can be seen)

- Power Switch should be in the ON position and power cord should be connected.

Display image is not sized properly

- Use the OSM Image Adjust controls to increase or decrease the H.SIZE.
- Check to make sure that a supported mode has been selected on the display card or system being used. (Please consult display card or system manual to change graphics mode.)

No Video

- If no video is present on the screen, turn the Power button off and on again.
- Make certain the computer is not in a power-saving mode (touch the keyboard or mouse).

No Sound

- Check to see if speaker cable is properly connected.
- Check to see if mute is activated.
- Check to see if volume in OSM is set at minimum.

Congratulations! You have just purchased a TCO'99 approved and labelled product! Your choice has provided you with a product developed for professional use. Your purchase has also contributed to reducing the burden on the environment and also to the further development of environmentally adapted electronics products.

Why do we have environmentally labelled computers?

In many countries, environmental labelling has become an established method for encouraging the adaptation of goods and services to the environment. The main problem, as far as computers and other electronics equipment are concerned, is that environmentally harmful substances are used both in the products and during the manufacturing. Since it has not been possible for the majority of electronics equipment to be recycled in a satisfactory way, most of these potentially damaging substances sooner or later enter Nature.

There are also other characteristics of a computer, such as energy consumption levels, that are important from the viewpoints of both the work (Internal) and natural (external) environments. Since all methods of conventional electricity generation have a negative effect on the environment (acidic and climate-influencing emissions, radioactive waste, etc.), it is vital to conserve energy. Electronics equipment in offices consume an enormous amount of energy since they are often left running continuously.

What does labelling involve?

This product meets the requirements for the TCO'99 scheme which provides for international and environmental labelling of personal computers. The labelling scheme was developed as a joint effort by the TCO (The Swedish Confederation of Professional Employees), Svenska Naturskyddsforeningen (The Swedish Society for Nature Conservation) and Statens Energimyndighet (The Swedish National Energy Administration).

The requirements cover a wide range of issues: environment, ergonomics, usability, emission of electrical and magnetic fields, energy consumption and electrical and fire safety.

The environmental demands concern restrictions on the presence and use of heavy metals, brominated and chlorinated flame retardants, CFCs (freons) and chlorinated solvents, among other things. The product must be prepared for recycling and the manufacturer is obliged to have an environmental plan which must be adhered to in each country where the company implements its operational policy. The energy requirements include a demand that the computer and/or display, after a certain period of inactivity, shall reduce its power consumption to a lower level in one or more stages. The length of time to reactivate the computer shall be reasonable for the user.

Labelled products must meet strict environmental demands, for example, in respect of the reduction of electric and magnetic fields, physical and visual ergonomics and good usability.

Environmental Requirements

Flame retardants

Flame retardants are present in printed circuit boards, cables, wires, casings and housings. In turn, they delay the spread of fire. Up to thirty percent of the plastic in a computer casing can consist of flame retardant substances. Most flame retardants contain bromine or chloride and these are related to another group of environmental toxins, PCBs, which are suspected to give rise to severe health effects, including reproductive damage in fish-eating birds and mammals, due to the bioaccumulative* processes. Flame retardants have been found in human blood and researchers fear that disturbances in foetus development may occur.

TCO'99 demand requires that plastic components weighing more than 25 grams must not contain flame retardants with organically bound chlorine and bromine. Flame retardants are allowed in the printed circuit boards since no substitutes are available.

Lead**

Lead can be found in picture tubes, display screens, solders and capacitors. Lead damages the nervous system and in higher doses, causes lead poisoning.

TCO'99 requirement permits the inclusion of lead since no replacement has yet been developed.

Cadmium**

Cadmium is present in rechargeable batteries and in the colourgenerating layers of certain computer displays. Cadmium damages the nervous system and is toxic in high doses.

TCO'99 requirement states that batteries, the colourgenerating layers of display screens and the electrical or electronics components must not contain any cadmium.

Mercury**

Mercury is sometimes found in batteries, relays and switches. Mercury damages the nervous system and is toxic in high doses.

TCO'99 requirement states that batteries may not contain any Mercury. It also demands that no mercury is present in any of the electrical or electronics components associated with the display unit.

CFCs (freons)

CFCs (freons) are sometimes used for washing printed circuit boards. CFCs break down ozone and thereby damage the ozone layer in the stratosphere, causing increased reception on Earth of ultraviolet light with consequent increased risks of skin cancer (malignant melanoma).

The relevant TCO'99 requirement; Neither CFCs nor HCFCs may be used during the manufacturing and assembly of the product or its packaging.

*Bio-accumulative is defined as substances which accumulate within living organisms.

**Lead, Cadmium and Mercury are heavy metals which are Bio-accumulative.

To obtain complete information on the environmental criteria document, order from:

TCO Development Unit

SE-114 94 Stockholm

SWEDEN

FAX Number: +46 8 782 92 07

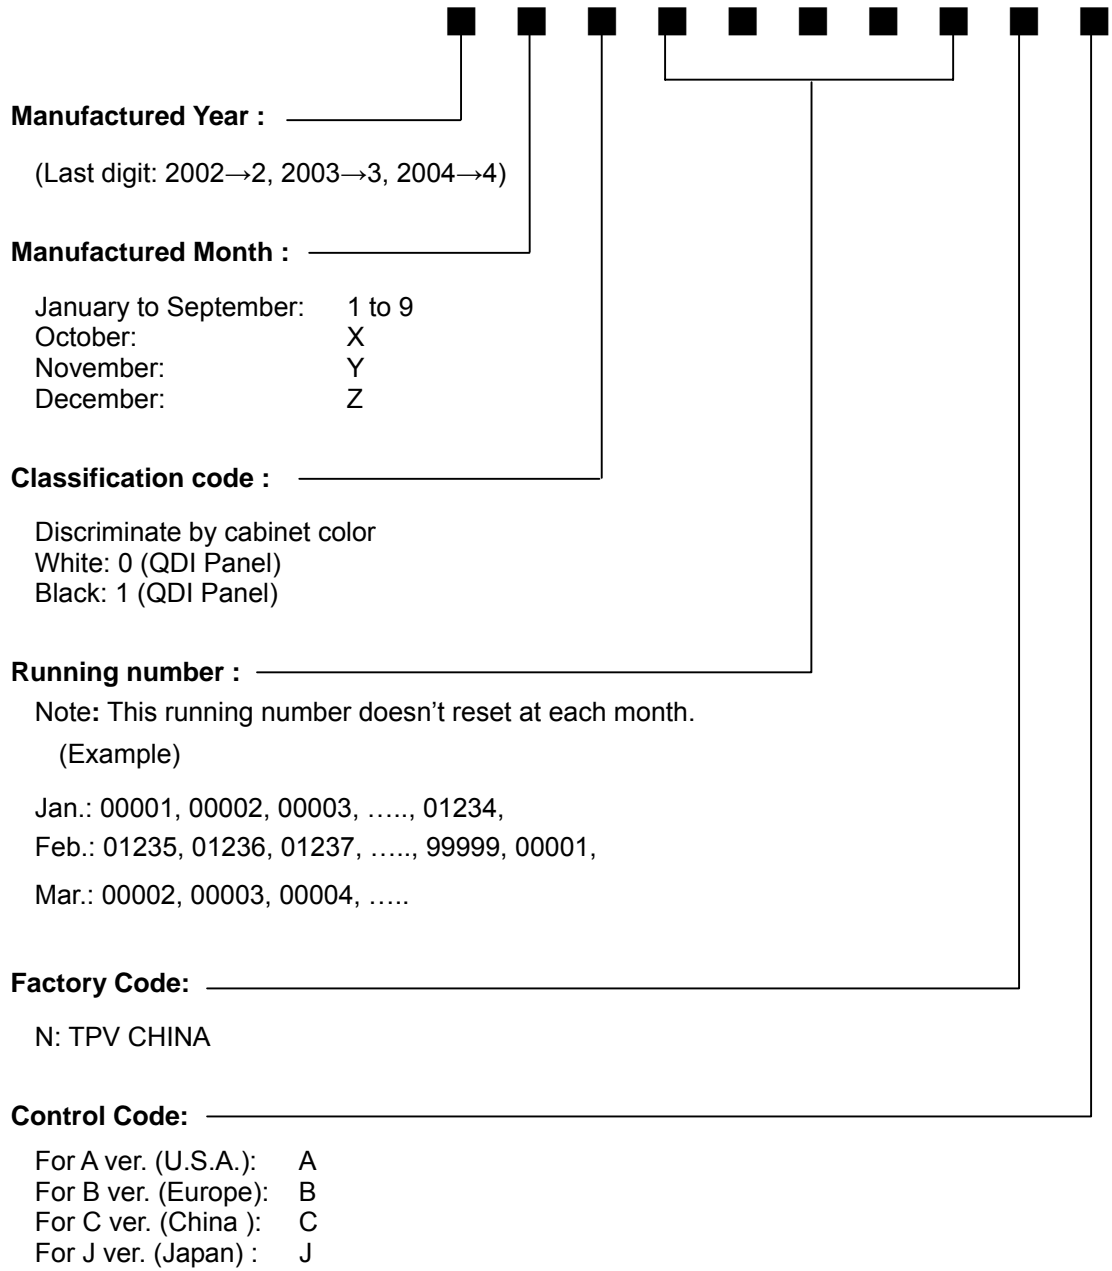

E-mail (Internet): development@tco.se

Serial Number Information

Refer to the serial number information shown below.

EX.) SERIAL NUMBER LABEL

DISASSEMBLY

- Before you disassemble the set, turn off power and pull out the power plug.
- Use the proper screwdriver. If oversize or undersize screwdriver is used, screws may be damaged.
- Assembly is the opposite process of disassembly.

3. Basic Operation

Power Button:

When pressed, the monitor enters the off mode, and the LED turns blank. Press again to restore normal status.

- / + Button:

The - / + Button is used to control the monitor functions. Press to switch functions or adjust settings.

Auto / Reset adjust Key:

The Auto Adjust Key is used to automatically set the H Position, V Position, Clock and Phase.

Power Indicator:

Green— Power On mode. **Orange**— Power Saving mode. **Blank**— Power Off Mode.

Control Buttons

KEY	Basic function at pressing each key			
	Select	—	+	Auto / Reset
At No OSD showing	Showing OSD	Shortcut to Bright adjust window.	Shortcut to Volume adjust window.	“Auto adjust” operate
At OSD showing (Icon selection stage)	Go to Adjustment stage.	Cursor goes to left .	Cursor goes to right .	No operate for other icon.
At OSD showing (Adjustment stage)	Go to Icon selection stage.	Adjust value decrease OR Cursor for adjust goes to left.	Adjust value increase OR Cursor for adjust goes to right.	Reset operation. Mute off/on switch on Volume adjustment window.

4. General Adjustment

OSM Control

All functions are controllable by OSM using four buttons on the front bezel (excluding power button).

Main menu (Icon select)

Volume		Normal	"Audio volume" Icon is chosen in 2 types, depending on the volume condition (normal / mute).
		Mute	
Color select	9300	7500	"Color selection" Icon is chosen in 4 types, depending on the volume condition (9300/7500/6500/USER).
	6500	USER	

Main Menu (Adjust)

No active area

Cursor : Yellow

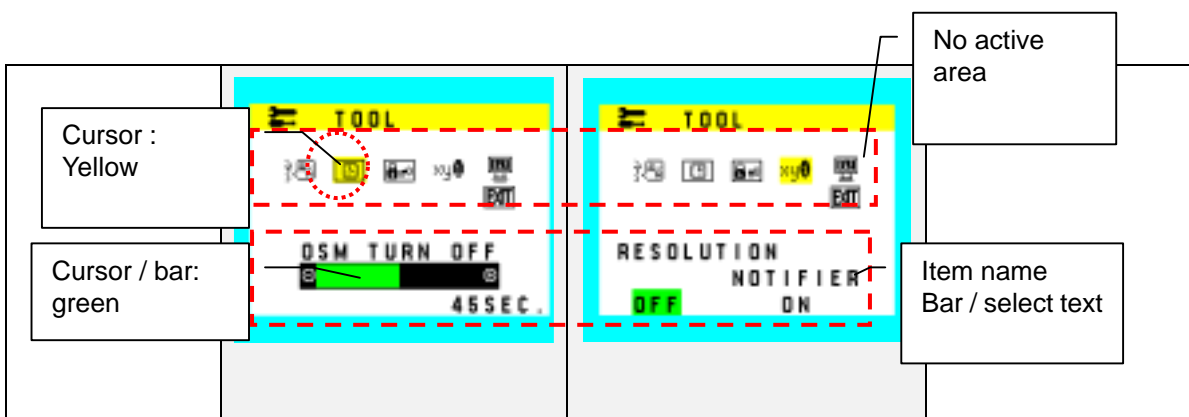

Bar / cursor : green

Item name
Slide bar / select text
Value (%)

Sub Menu (Icon Select)

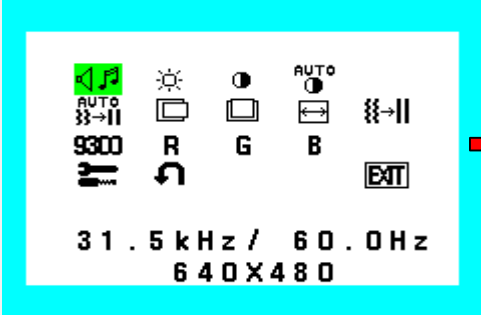

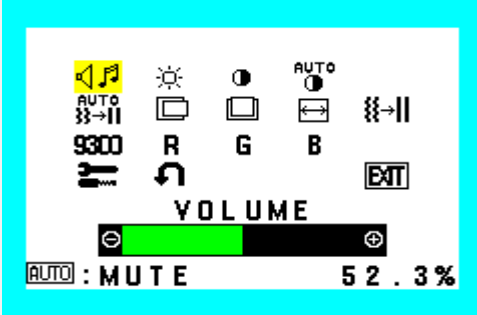

Sub Menu (Adjust)

4.1 USER Mode

Volume

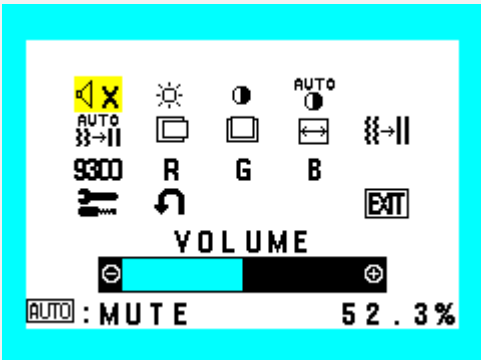

Control the sound volume of speakers and headphone.

Icon select	Audio adjust
	
<ol style="list-style-type: none"> 1. During volume function operate, volume Icon and slide bar color is changed from Normal condition. 2. " + " Turn the volume up 3. " - " Turn down the volume 4. At exiting from this state, adjusted value is saved to EEPROM. 	

Sound Mute

This function is the sound mute switch (toggle).

To call this function, press AUTO/RESET button when Volume menu is displayed.

Audio (Icon select)	Audio (Adjust: Mute)
	<p>During mute function operate, mute Icon and slide bar color is changed from Normal condition.</p>

Brightness

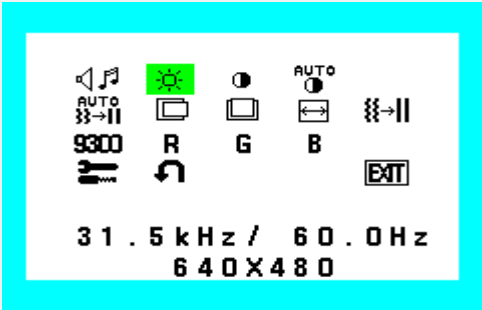

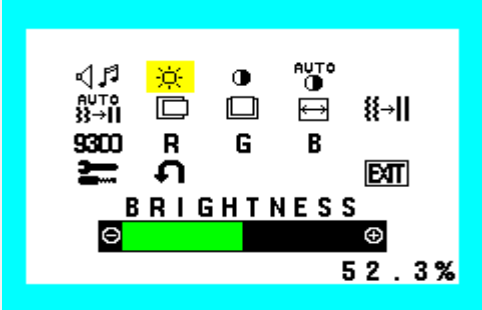

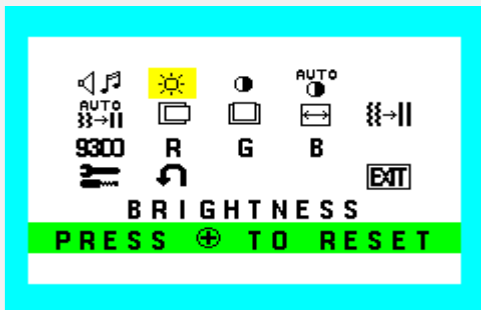

Adjust the background screen brightness by using backlight inverter.

Control range (BAR): 0.0% to 100.0%

Factory setting: 100%

Actual brightness control range: 30% to 100%

30% = (Brightness value [cd/m²] when user controls Brightness Max) x 0.3

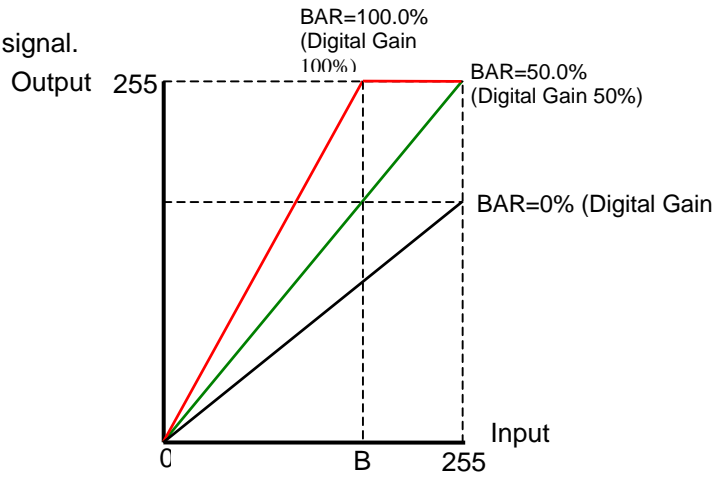

Brightness (Icon select)	Brightness (Adjust)
	
<ol style="list-style-type: none"> 1. During Brightness function operate, Brightness Icon and slide bar color is changed from Normal condition. 2. "+" Value increase (to bright) 3. "-" Value decrease (to dark) 4. At exiting from this state, adjusted value is saved to EEPROM. 	
Brightness (Reset)	
	<p>Recall Brightness value to factory setting</p>

Contrast

Adjust the image contrast by controlling input signal.

Control range: (BAR): 0.0% to 100.0%

Factory setting: 50%

B is around 205/255. It means about 4/16 gray will be white.

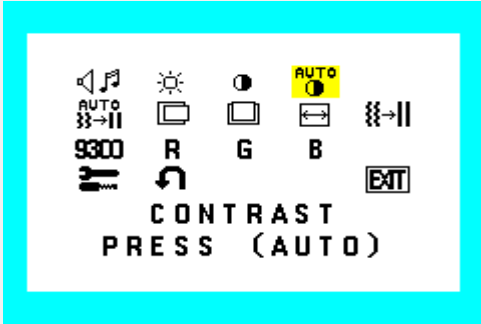

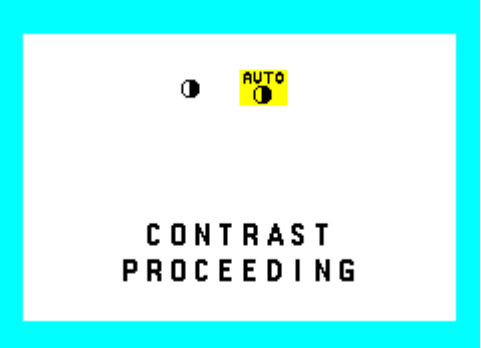

Contrast (Icon select)	Contrast (adjust)
<ol style="list-style-type: none"> 1. During Contrast function operate, Contrast Icon and slide bar color is changed from Normal condition. 2. "-" Value decrease (to dark) 3. "+" Value increase (to bright) 4. At exiting from this state, adjusted value is saved to EEPROM. 	
Contrast (reset)	
	<p>Recall Contrast value to factory setting</p>

AUTO (Contrast)

Adjust the CONTRAST to the optimal value for the video-input level automatically. For example, when the amplitude of video input was larger/smaller than 0.7Vp-p, the value of contrast was automatically adjusted to the value, which will be in the same display condition as the video-input level was 0.7Vp-p.

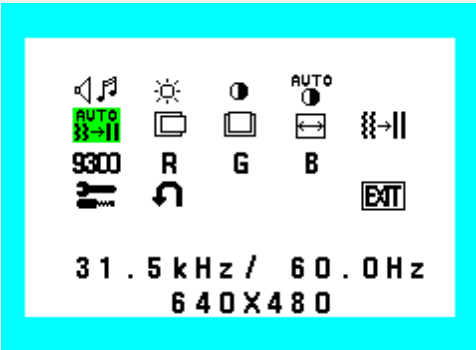

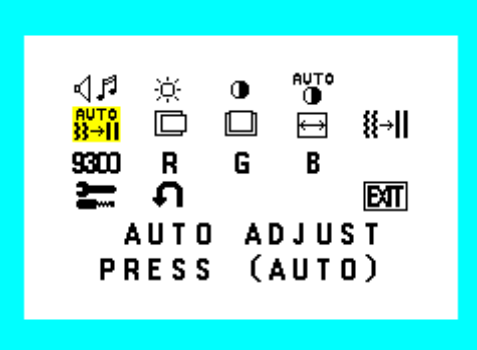

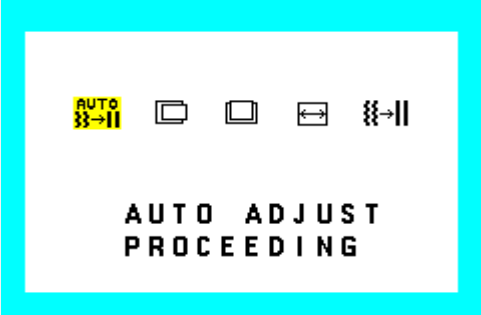

All other OSM operations shall be canceled in this adjustment term (probably during several seconds). After adjustment execute set to 50% of contrast value.

Auto Contrast (Icon select)	Auto Contrast (adjust)
 <p>The OSD menu shows various icons: a speaker, a sun, a circle with a dot, a green 'AUTO' icon, a double arrow, a '9300' label, 'R', 'G', 'B' labels, a double arrow, a '9300' label, a refresh icon, and an 'EXT' button. At the bottom, it displays '31.5 kHz / 60.0 Hz' and '640X480'.</p>	 <p>The OSD menu is similar to the previous one, but the 'AUTO' icon is highlighted in yellow. Below the menu, the text 'CONTRAST PRESS (AUTO)' is displayed.</p>
<p>During Auto Contrast function operate, Auto Contrast Icon and slide bar color is changed from Normal condition.</p>	
Auto Contrast (Proceeding)	
 <p>The OSD shows a small circle icon and a yellow 'AUTO' icon. Below them, the text 'CONTRAST PROCEEDING' is displayed.</p>	<p>Operate "Auto Contrast Adjust" with showing this OSD.</p>

AUTO (Geometry)

Adjust the H.POSITION, V.POSITION, H-SIZE and FINE to the optimal value automatically.

All other OSD operations shall be canceled in this adjustment term (probably during several seconds).

Auto adjust (Icon select)	Auto adjust (adjust)
	
<p>During AUTO function operate, AUTO Icon and slide bar color is changed from Normal condition.</p>	
Auto Adjust (Proceeding)	
	<p>Operate "Auto Adjust" with showing this OSD.</p>

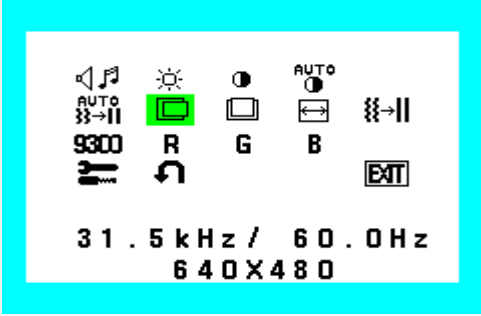

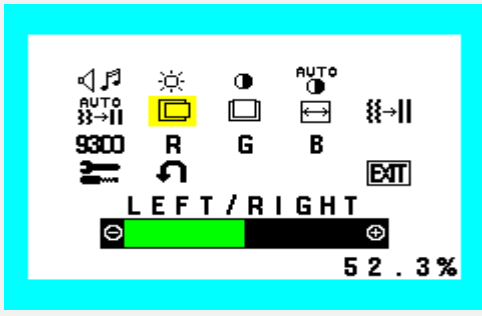

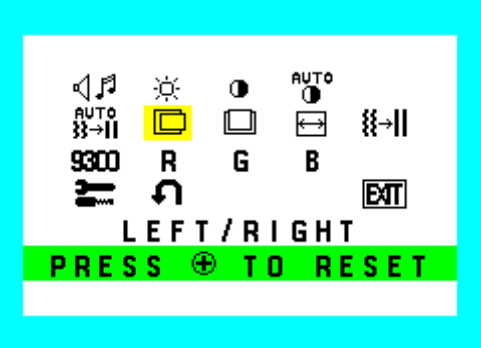

H. Position

Adjust the horizontal image position.

Indicator Value and Bar of minimum position should be 0.0%

Indicator Value and Bar of maximum position should be 100.0%

Factory setting: Optimal value for the signals which is stated in the VESA standard..

Left/Right (H.Posi) (Icon select)	Left/Right (H.Posi) (adjust)
	
<ol style="list-style-type: none"> 1. During H.Posi function operate, H. Posi Icon and slide bar color is changed from Normal condition. 2. "-" Value decrease (to left) 3. "+" Value increase (to right) 4. At exiting from this state, adjusted value is saved to EEPROM. 	
Left/Right (H.Posi) (RESET)	
	<p>Recall H. Posi value to factory setting</p>

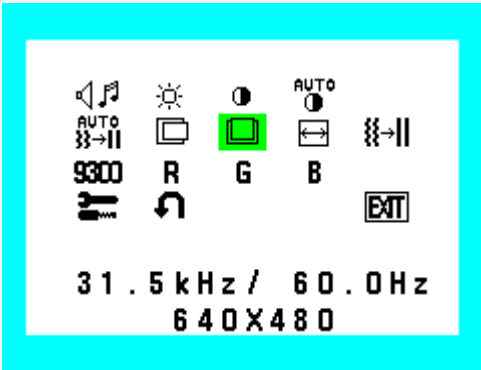

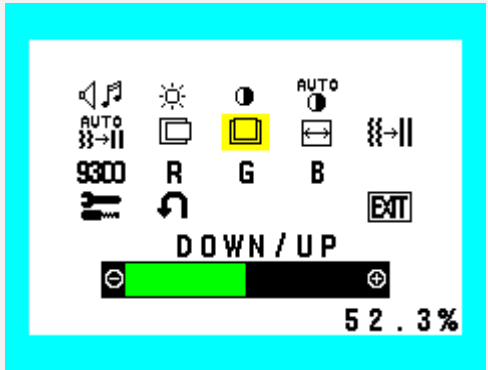

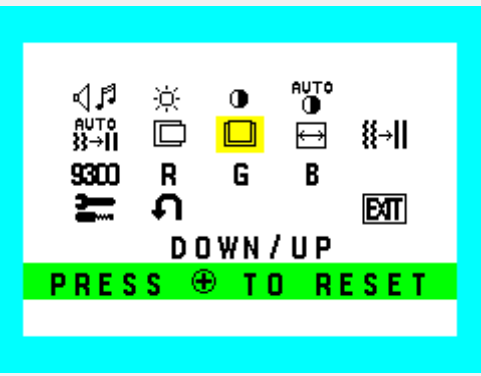

V. Position

Adjust the horizontal image position.

Indicator Value and Bar of minimum position should be 0.0%

Indicator Value and Bar of maximum position should be 100.0%

Factory setting: Optimal value for the signals which is stated in the VESA standard.

Down/Up (V.Posi) (Icon select)	Down/Up (V.Posi) (adjust)
	
<ol style="list-style-type: none"> 1. During V.Posi function operate, V. Posi Icon and slide bar color is changed from Normal condition. 2. “-” Value decrease (to down) 3. “+” Value increase (to up) 4. At exiting from this state, adjusted value is saved to EEPROM. 	
Down/Up (V.Posi) (Reset)	
	<p>Recall V. Posi value to factory setting</p>

H. Size

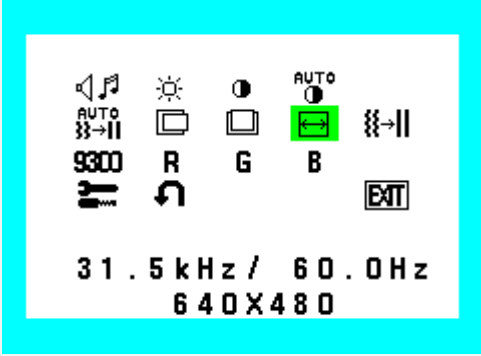

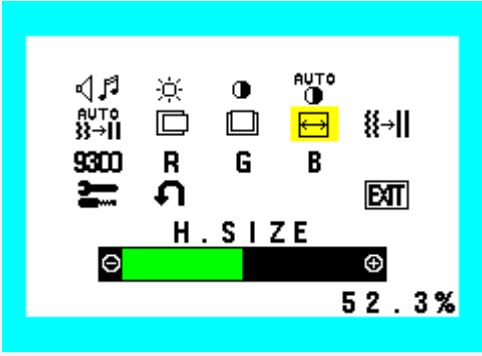

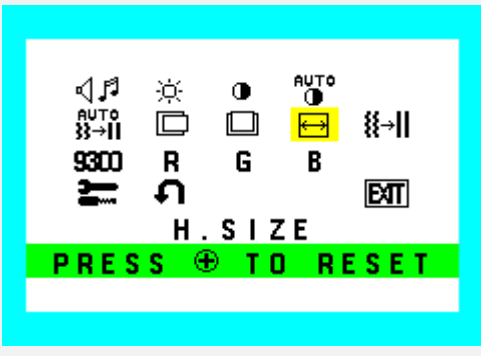

Adjust the frequency of internal pixel clock.

When increasing the value, the width of display image become wider, and when decreasing the value, the width becomes narrower. (Step 1pixel-clock .odd numbered, even numbered steps)

Indicator Value and Bar of minimum position should be 0.0%

Indicator Value and Bar of maximum position should be 100.0%

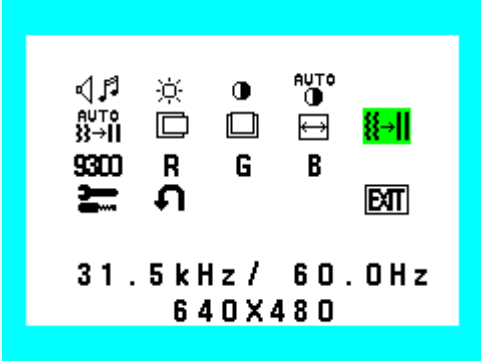

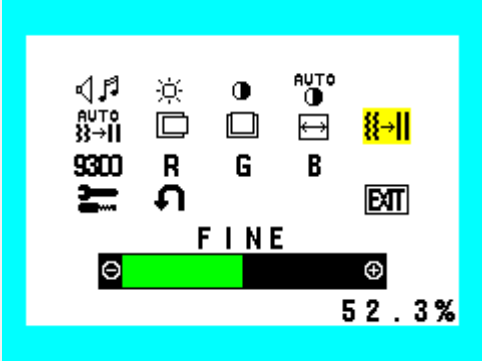

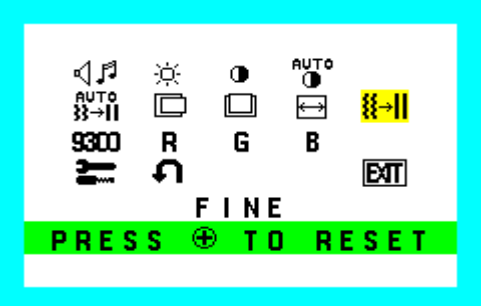

Factory setting: Optimal value for the signals, which is stated in the VESA standard.

H.Size(Clock) (Icon select)	H.Size(Clock) (Adjust)
	
<ol style="list-style-type: none"> 1. During H.Size function operate, H. Size Icon and slide bar color is changed from Normal condition. 2. “-” Value decrease (to narrow) 3. “+” Value increase (to wide) 4. At exiting from this state, adjusted value is saved to EEPROM. 	
H.Size(Clock) (Reset)	
	<p>Recall H. Size value to factory setting</p>

Fine

Adjust the delay of internal clock to control the display focus. Indicator Value and Bar of minimum position should be 0.0% Indicator Value and Bar of maximum position should be 100.0%

Factory setting: "0"

Fine (Phase) (Icon select)	Fine (Phase) (adjust)
	
<ol style="list-style-type: none"> 1. During Phase function operate, Phase Icon and slide bar color is changed from Normal condition. 2. "-" Value decrease 3. "+" Value increase 4. At exiting from this state, adjusted value is saved to EEPROM. 	
Fine(Phase) (Reset)	
	<p>Recall Phase value to factory setting</p>

Color

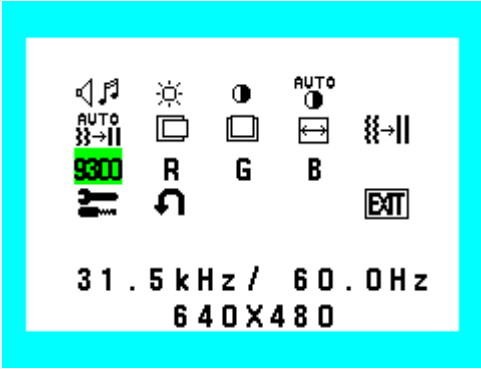

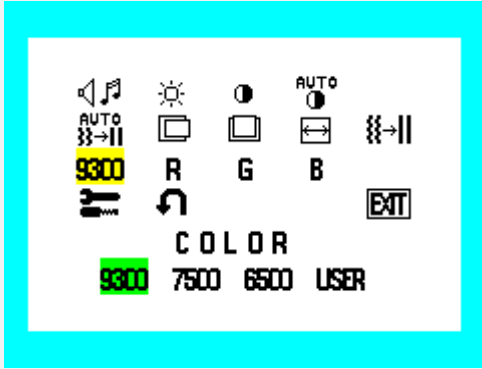

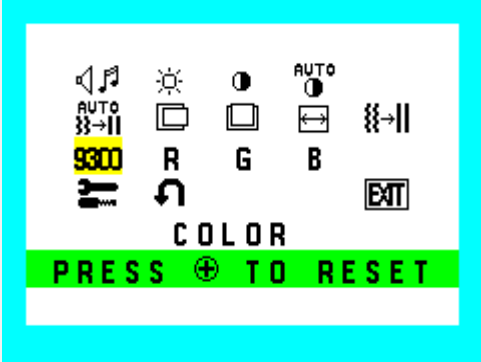

Selecting three preset color (9300, 7500, 6500) and one user customize.

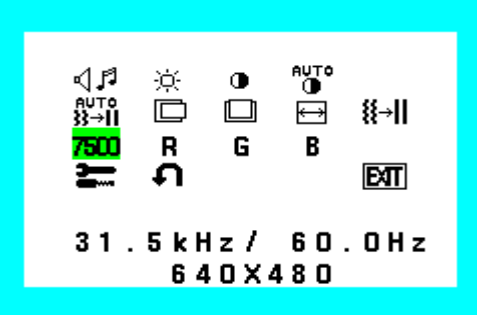

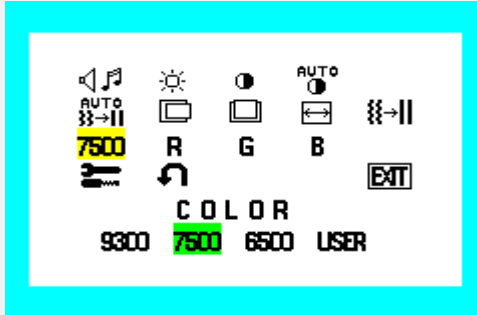

9300, 7500 and 6500 can't change RGB value in User Mode

But, If open RGB menu when Selecting 9300, 7500 or 6500 then display each RGB color value (Don't change User value when only display)

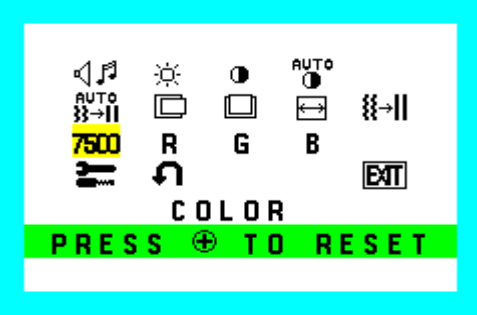

If change RGB menu when Selecting 9300, 7500 or 6500 then over write User value from each preset color value. And change user value.

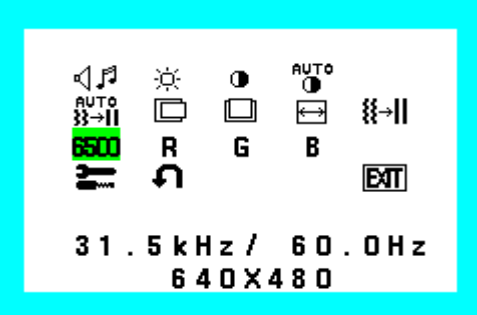

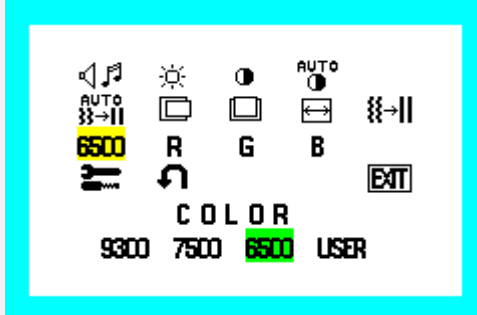

"USER" can change RGB value.

9300 Color select (Icon select)	Color select (adjust)
 <p>The screenshot shows the main menu with various icons. The '9300' icon is highlighted in green. Below the icons, the text reads: '31.5 kHz / 60.0 Hz' and '640X480'.</p>	 <p>The screenshot shows the 'Color select (adjust)' menu. The '9300' icon is highlighted in green. Below the icons, the text reads: 'COLOR' and '9300 7500 6500 USER'.</p>
<p>During Color select function operate, Color select Icon and slide bar color is changed from Normal condition.</p>	
Color select (Reset)	<p>Reset: Color select / User R, G, B</p>
 <p>The screenshot shows the 'Color select (Reset)' menu. The text 'PRESS + TO RESET' is highlighted in green.</p>	

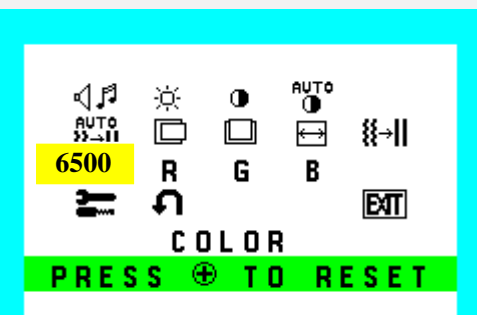

<p>7500 Color select (Icon select)</p>	<p>Color select (adjust)</p>

	Reset: Color select / User R, G, B

Color Blue (Icon select)	Color Blue (adjust)
	

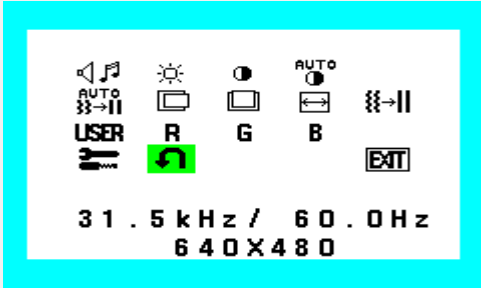

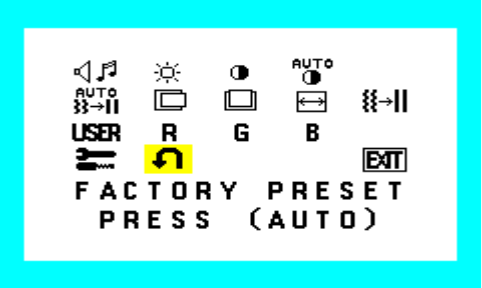

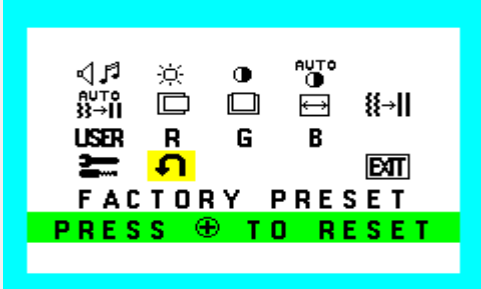

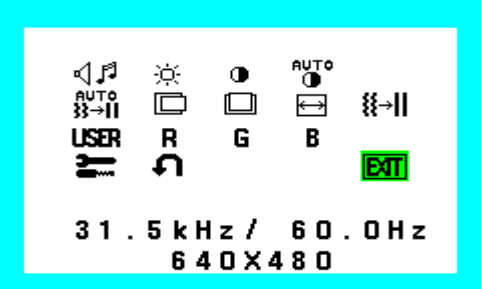

1. During Color Blue function operate, Color Blue Icon and slide bar color is changed from Normal condition.
2. “-” Value decrease (Blue gain decrease) 3.”+” Value increase (Blue gain increase)

Color Blue (Icon select)	
	Reset: Color select / User R, G, B

Tool (Icon select)	
	

Factory Reset and OSD Close

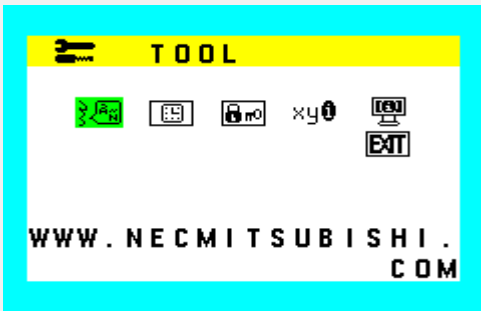

Reset all user settings to factory preset value except language selection.

Factory Preset (Icon select)	Factory Preset (adjust)
	
<p>During Color Blue function operate, Color Blue Icon and slide bar color is changed from Normal condition.</p>	
Factory Preset (confirmation)	Exit (OSD Close)
	

Language

Select one language for OSD. Seven languages are available for OSD menu.

The seven languages are English, Germany, French, Spanish, Italian, Swedish and Japanese.

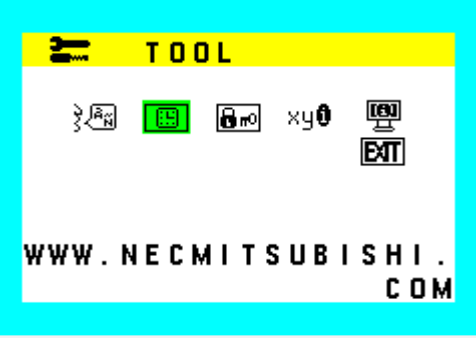

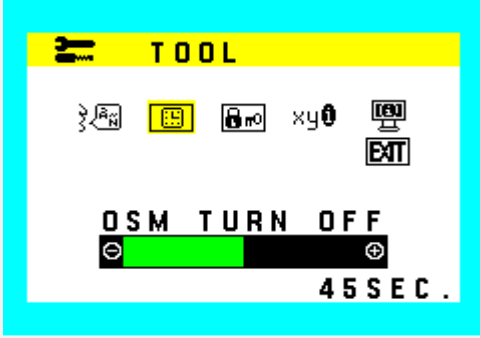

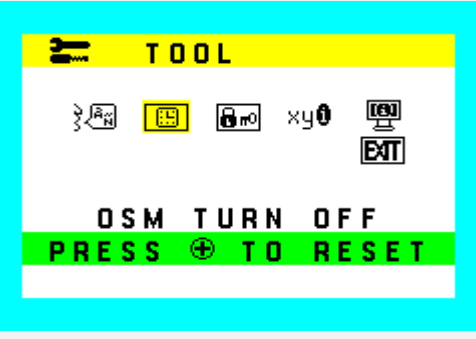

Language (Icon select)	Language (adjust)
	
<p>Press SELECT key again you can exit it.</p>	

OSD Turn off

Select OSD Menu turn off time.

10 - 120 seconds are available by 5 second step.

Factory setting: 45 seconds.

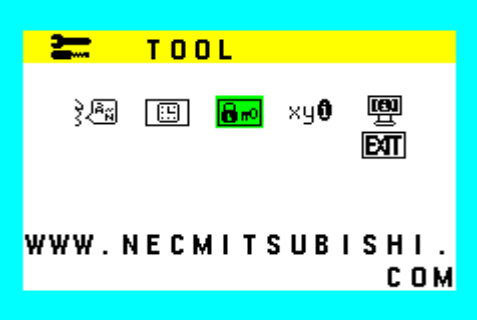

OSD Turn off (Icon select)	OSD Turn off (adjust)
 <p>The screenshot shows the 'TOOL' menu with several icons. The OSD Turn Off icon, which depicts a monitor with a diagonal slash, is highlighted with a green border. Below the icons, the text 'WWW.NECMITSUBISHI.COM' is visible.</p>	 <p>The screenshot shows the 'OSM TURN OFF' adjustment screen. A slider bar is visible, with a green segment on the left and a black segment on the right. The value '45 SEC.' is displayed at the bottom right of the screen.</p>
<ol style="list-style-type: none"> 1. During OSD Turn off function operate, OSD Turn off Icon and slide bar color is changed from Normal condition. 2. "-" Value decrease (to short) 3. "+" Value increase (to long) 	
OSD Turn off (Reset)	
 <p>The screenshot shows the 'OSM TURN OFF' screen. At the bottom, there is a green bar with the text 'PRESS + TO RESET' in black.</p>	<p>Reset: OSD Turn Off</p>

OSD Lock Out

This function locks out all access to OSD controls except volume, brightness and contrast control. When attempting to activate OSD controls while in the lock out mode, simple OSD menu of volume, brightness and contrast will appear.

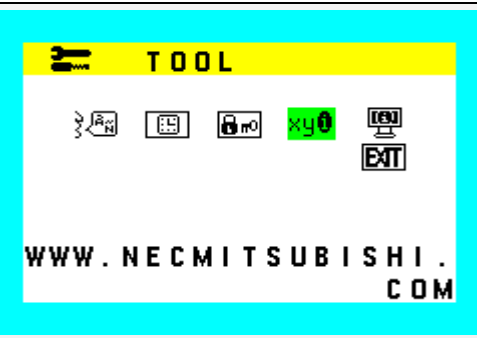

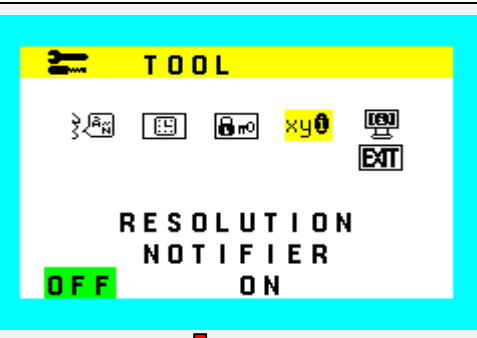

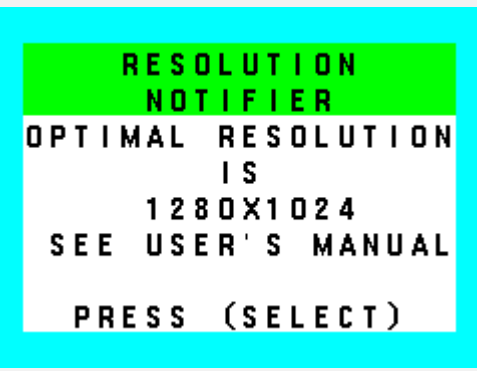

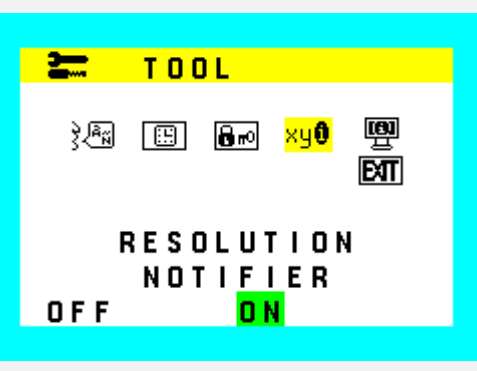

To activate the OSD Lock Out function, enter to OSD LOCK OUT menu, then press “+” key and AUTO key hold down simultaneously.

To de-activate the OSD Lock Out function, press “+” key and AUTO key hold down simultaneously.

OSD Lock Out (Icon Select)	OSD Lock Out (Adjust)
	

Resolution Notifier

Activate or de-activate Resolution Notifier function.

Resolution Notifier (Icon select)	Resolution Notifier (adjust)
	
	

During Resolution Notifier function operate, Resolution Notifier Icon and slide bar color is changed from Normal condition.

This function gives warning about the display resolution.

This warning will appear in 30 seconds after the video signals except SXGA mode are input and the message shall turn off after OSD Turn Off time, or push "SELECT" key.

Resolution notifier OSD shall be shown under following conditions.

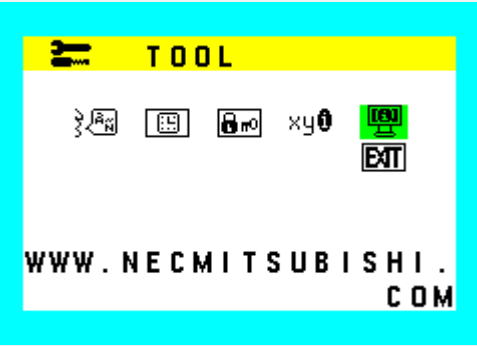

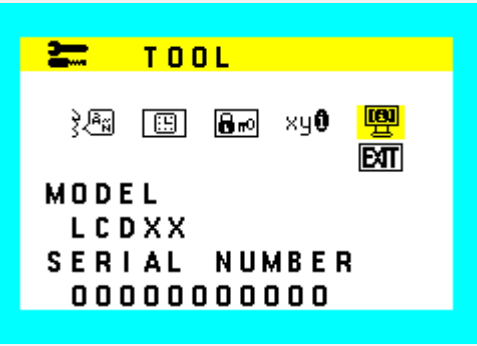

1. Resolution Notifier function is enabled.
2. CPU detects video signal is support mode (=not out of range mode) and not optimal resolution(1280x1024).
3. 30 seconds passed from the decision of video mode, and no OSD menu was shown at that time.

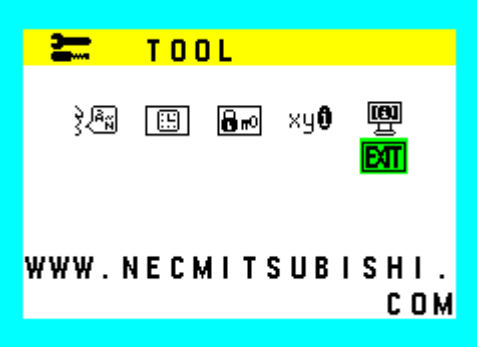

Resolution notifier OSD does NOT have priority over main OSD menu. If 30sec passed and if Main OSD menu is shown at that time, open Resolution notifier OSD "just after Main menu close".

Monitor Information (INFO)

Indicate the model and serial number of the unit.

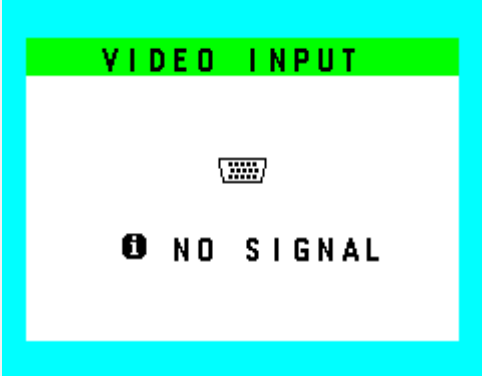

Model Name and serial number should be stored in EEPROM. And Model name should be programmed in factory. Number of characters for model name is max 9 and Number of characters for serial number is max 13.

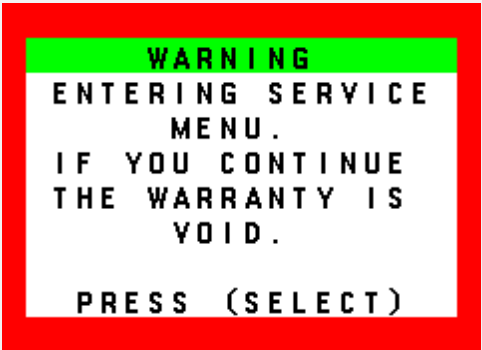

Monitor Info. (Icon select)	Monitor Info. (Information display)
	
<p>Reserve memory area for Model name and serial number Model name: 9 characters max. Serial number: 13 character max. Model name indication: NEC Brand model: LCD72VM /LCD72VM-BK</p>	

Exit (sub menu close)	
	

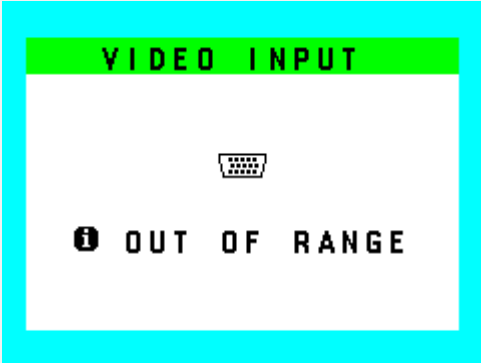

OSM Functions – Warnings

NO SIGNAL

Video Input: No Signal	
 A screenshot of a video input warning OSD. It features a cyan border around the text. At the top, a green bar contains the text 'VIDEO INPUT'. Below this, there is a small icon of a video camera. At the bottom, the text 'NO SIGNAL' is displayed next to an information icon (a lowercase 'i' inside a circle).	<p>This function gives a warning when input signal is not active. After power on or when input signal become inactive, this warning will appear.</p> <p>No signal OSD shall be shown after around 0.5sec from decision of video mode. This OSD shall be turned off after 5 seconds automatically. Then go to power saving mode. "No Signal" OSD Shall be displayed in the center of screen.</p>

Warning for factory menu	
 A screenshot of a warning OSD for the factory menu. It has a red border. At the top, a green bar contains the text 'WARNING'. Below this, the text reads: 'ENTERING SERVICE MENU.', 'IF YOU CONTINUE THE WARRANTY IS VOID.', and 'PRESS (SELECT)'.	<p>This is right. Because this warning message is for user. We urge to no enter to service menu.</p>

Out of Range

Video Input: Out of Range	
	<p>This function gives warning about input resolution or refresh rate which the monitor cannot display.</p> <p>If video signal is not proper timing when monitor power on or input signal is changed.</p>

When an out of range condition is formed, it displays OSD of the out of range mode.

Measured frequency is in the following case.

A. The out of range display of the screen non- display (The background screen is in the mute condition (The black background)).

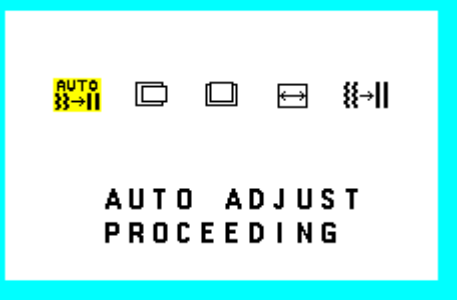

When the screen can not be displayed in the specification of the LCD panel by changing " H.size scaling rate and so on", "Out Of Range" OSD Shall be displayed in the center of screen.

B.The out of range display of the screen display(When the screen can be displayed in the specification of the LCD panel by changing " H.size, scaling rate and so on") "Out Of Range" OSD Shall be displayed in the center of screen.

Also, when judging case 2, Auto adjust function shall be proceeded. The Auto adjust function is described in section (Auto Adjust)

OSD Function –Short cut

Auto Adjust (Geometry)

Auto Adjust (proceeding)	
	<ol style="list-style-type: none">1. Operate "Auto Adjust" with showing this OSD.2. This function is adjust the H.POSITION, V.POSITION, H-SIZE and FINE to the optimal value automatically. To call this function, press "AUTO/RESET" button.

Other Functions

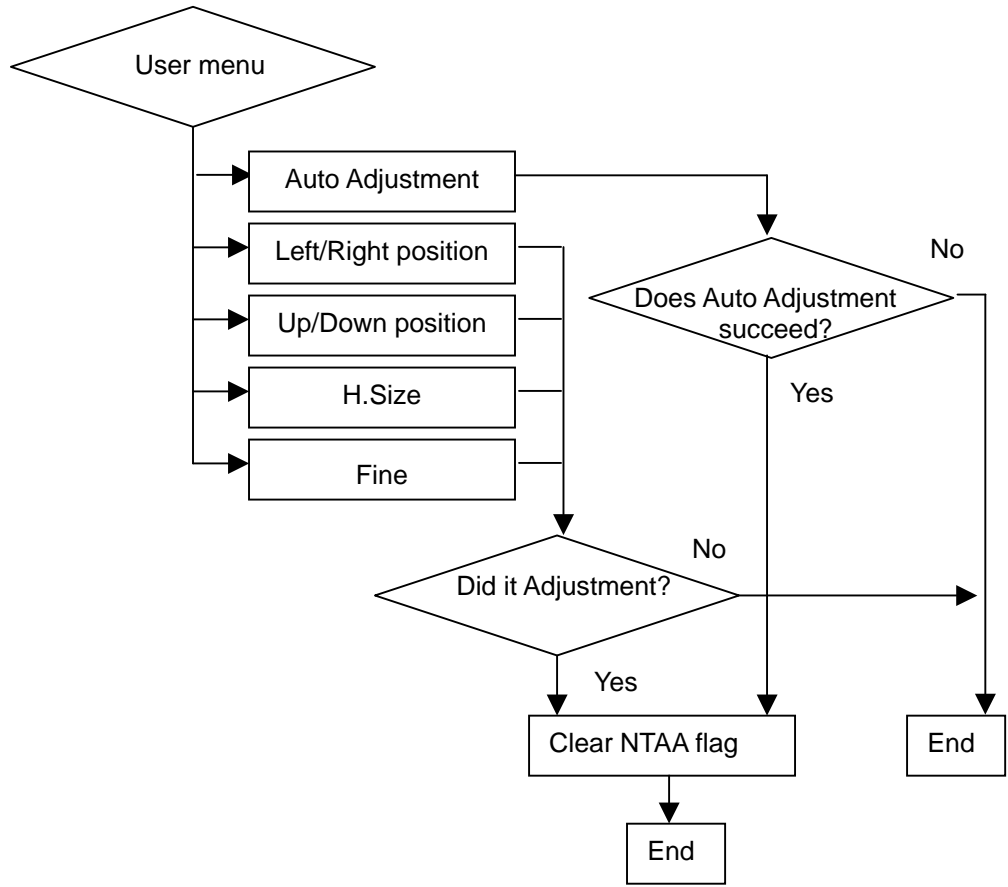

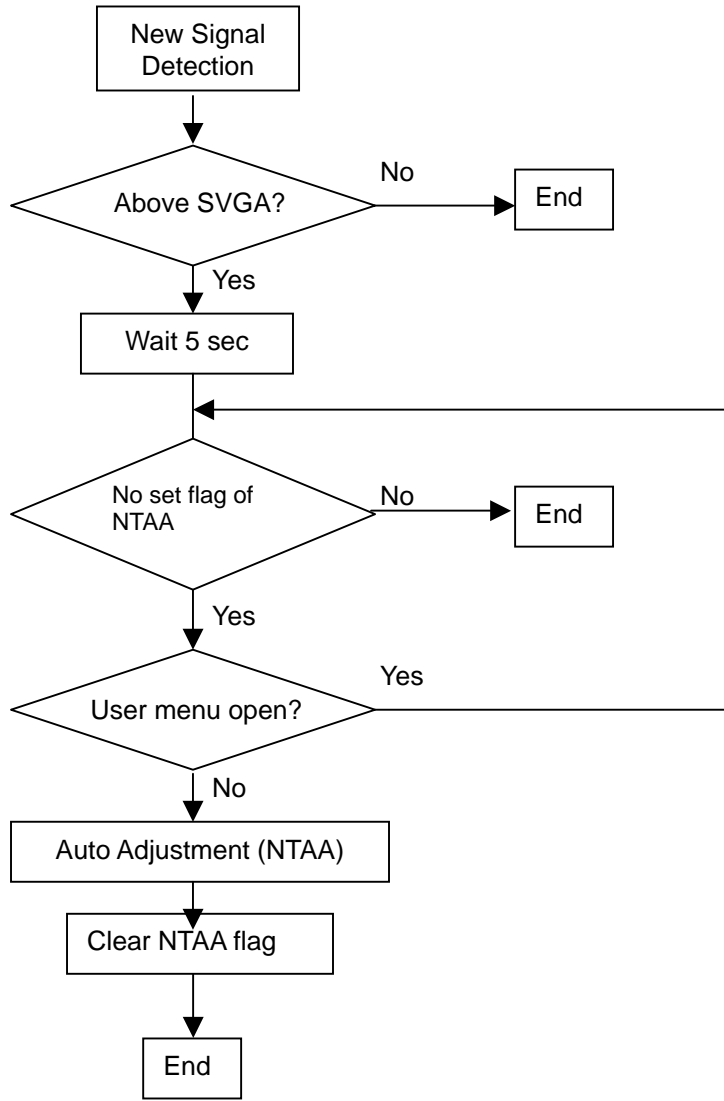

No Touch Auto Adjust

When monitor receive SVGA or higher video modes, Auto Adjust function shall execute automatically only once for each video modes. After proceeding NTAA function, set the NTAA flag, of that video mode, on. The NTAA flag shall be clear by only Factory preset in Factory/Service menu.

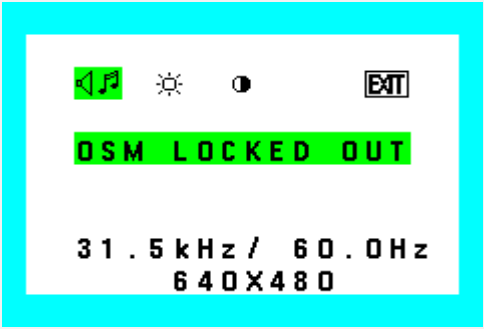

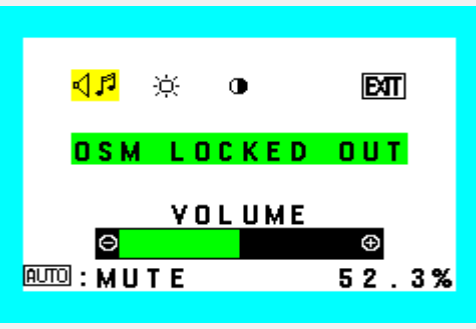

The character string "PROCEEDING..." shall be blinked during execution of automatic adjustment.

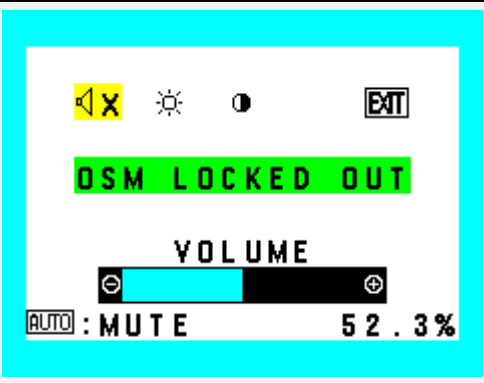

All key inputs, except power key, shall be canceled, during excursion.

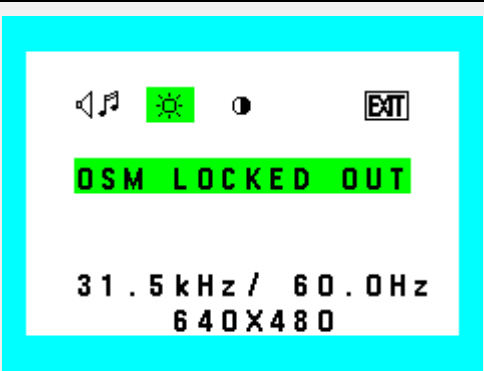

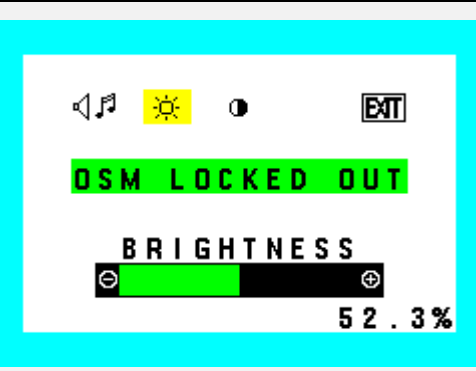

NTAA is executed frequency until auto adjustment succeeds.

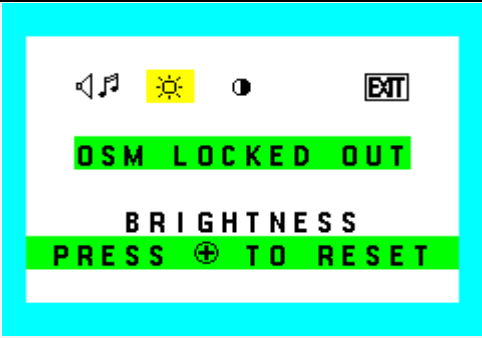

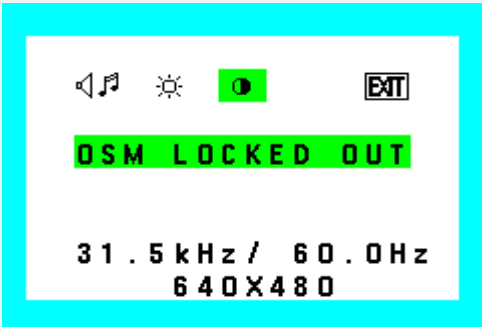

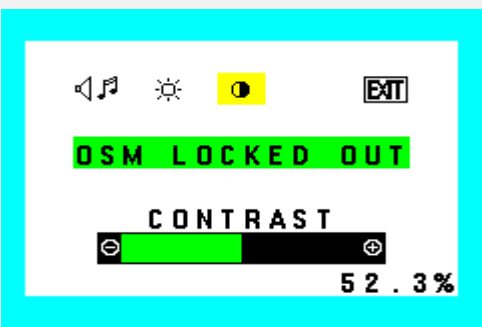

OSD Lockout

Audio (Icon select)	Audio (Adjust)
 <p>The screen shows the audio icon selected in green. The text 'DSM LOCKED OUT' is displayed in green. Below it, the audio settings '31.5 kHz / 60.0 Hz' and '640x480' are shown.</p>	 <p>The screen shows the volume slider highlighted in cyan. The text 'DSM LOCKED OUT' is displayed in green. Below it, the word 'VOLUME' is shown above a slider bar with minus and plus icons. At the bottom, it says 'AUTO : MUTE' and '52.3%'.</p>
<ol style="list-style-type: none"> 1. During Audio function operate, Audio Icon and slide bar color is changed from Normal condition. 2. “-” Turn down the volume 3. “+” Turn the volume up 	

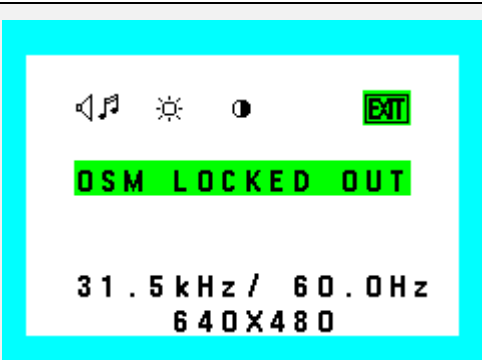

Audio (Adjust: Mute)	
 <p>The screen shows the audio icon with a red 'X' over it, indicating mute. The text 'DSM LOCKED OUT' is displayed in green. Below it, the word 'VOLUME' is shown above a slider bar. At the bottom, it says 'AUTO : MUTE' and '52.3%'.</p>	<p>During mute function operate, Audio Icon and slide bar color is changed from Normal condition.</p>

Brightness (Icon select)	Brightness (Adjust)
 <p>The screen shows the brightness icon selected in green. The text 'DSM LOCKED OUT' is displayed in green. Below it, the audio settings '31.5 kHz / 60.0 Hz' and '640x480' are shown.</p>	 <p>The screen shows the brightness slider highlighted in cyan. The text 'DSM LOCKED OUT' is displayed in green. Below it, the word 'BRIGHTNESS' is shown above a slider bar with minus and plus icons. At the bottom, it says '52.3%'.</p>
<ol style="list-style-type: none"> 1. During Brightness function operate, Brightness Icon and slide bar color is changed from Normal condition. 2. “ - ” Value decrease (to dark) 3. “+ ” Value increase (to bright) 	

Brightness (reset)	
	<p>Reset: Brightness value</p>

Contrast (Icon select)	Contrast (adjust)
	
<ol style="list-style-type: none"> 1. During Contrast function operate, Contrast Icon and slide bar color is changed from Normal condition. 2. “-” Value decrease (to dark) 3. “+” Value increase (to bright) 	

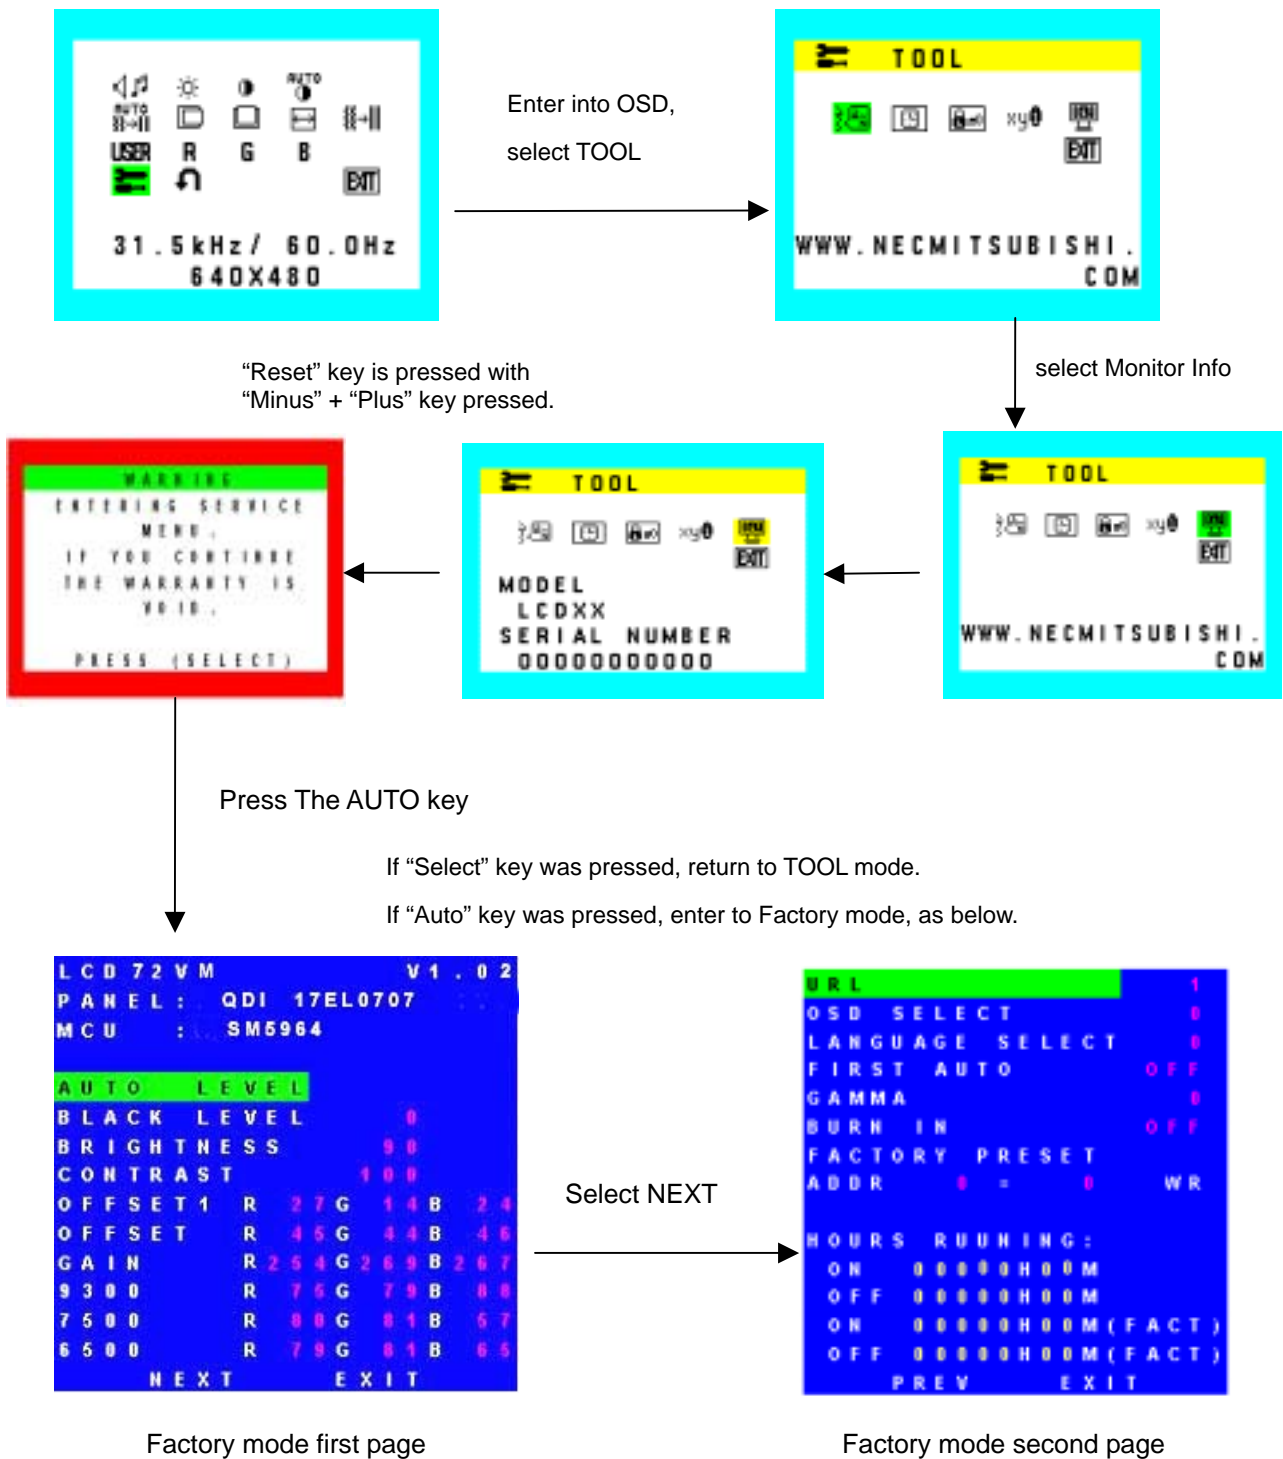

Contrast (reset)	
	<p>Reset: Contrast value</p>

Exit (Close OSM)	
	<p>Lock Out “OFF” is saved.</p>

4.2 Factory Mode

If there is specific key input, while displaying Display mode OSM, enter to the Factory menu.

When "Reset" + "Minus" + "Plus" key or "Reset" + "Left" + "Right" key was input during displaying Display mode OSM, open Warning OSM shows below.

Remark:

Adjust each R, G, B contrast (gain) and offset. Method of auto adjust is using ADC gain and offset. All value shall be adjustable manually.

Factory Mode First Page

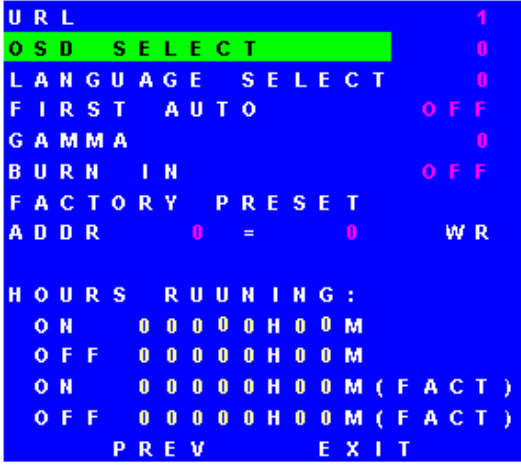

- Auto Level:** Press this icon, Software will find out the Gain, offset, offset1 value automatically.
- Black Level:** Digital Offset (setting by software)
- Offset1:** Analog RGB offset1 (scalar internal DC bias calibration data, setting by software)
- Offset:** Analog RGB offset (Signal DC bias calibration data, setting by software)
- Gain:** Analog RGB gain (setting by software)
- 9300:** Digital RGB gain (for setting white balance 9300)
- 7500:** Digital RGB gain (for setting white balance 7500)
- 6500:** Digital RGB gain (for setting white balance 6500)

HOURS RUNNING (Factory mode second page)

HOURS RUNNING		
	<ol style="list-style-type: none"> 1. Indicate the “monitor power ON time” and “power save time” counted from factory shipment. 2. Hour Running function has four kinds of timer. <ol style="list-style-type: none"> a. Monitor power on time (Reset-able) b. Power save time (Reset-able) c. Monitor power on time (Un reset-able) d. Power save time (Un reset-able) <p>Note1: Power save time = Stand by mode + Suspend mode + off mode</p>	

Note: “PREV”: Return to Factory mode first page.

“EXIT”: Exit the Factory mode.

5. Adjustment Mode Setting

AUTO LEVEL

- 1) Enter an input signal of VESA (1280×1024 @75Hz) input signal all white.
- 2) Enter the factory mode according to “4.2 Factory and Service mode”
- 3) Pressing the (-) or (+) button, adjust the high light to [AUTO LEVEL]. When the SELECT button is pressed, adjustment of the bias and the gain is carried out.

- 4) When adjustments have been finished, Pressing the (-) or (+) button, adjust the high light to [EXIT].
When the SELECT button is pressed, close the factory mode.

Note: Check whether RGB data is as follows in the case of Auto Color adjustment.

Auto Color R/G/B Data for QDI panel (QDI QD17EL07)

	R	G	B
9300	69	75	65
7500	78	76	53
6500	85	82	53

- 1) Select “R”, “G”, or “B” in the factory mode by pressing the “- (LEFT)” or “+ (RIGHT)” button.
- 2) When the MENU button is pressed, the high light moves to R/G/B data.
- 3) Press the “- (LEFT)” or “+ (RIGHT)” button to turn a numerical value is changed.
- 4) After the MENU button has been pressed, select “AUTO” and press the MENU button again.
This causes the factory mode to be closed. (Try to display the OSD to confirm whether the service mode or the factory mode has been closed.)

6. Panel Brightness Check

- 1) Enter the input signal of 1280×1024 @75Hz, in Full white pattern.
- 2) Proceed "Factory Preset" function of miscellaneous menu.
- 3) OSM setting "BRIGHTNESS" to Max. (100%) and "CONTRAST" to 100%.
- 4) Color temperature setting to "USER" (R: 100%, G: 100%, B: 100%).
- 5) Check the center luminance should $\geq 250\text{cd/m}^2$.

7. Panel Color Check

- 1) Enter an input signal of 1280×1024 @75Hz, in Full white pattern.
- 2) Proceed "Factory Preset" function. Brightness: 100%, Contrast:100%
- 3) Color temperature setting to "USER" (R: 100%, G: 100%, B: 100%).
- 4) Check the center color coordination. $x = 313 \pm 10$, $y = 329 \pm 10$, $Y=190 \pm 10$

8. Color Temperature Check

- 1) Enter an input signal of 1280×1024 @75Hz, in Full white pattern.
- 2) OSM "BRIGHTNESS" setting to Max. (100%) and "CONTRAST" setting to 50%.
- 3) Color temperature setting to each color.
- 4) Each color temperature setting as below:

9300K: $x = 283 \pm 10$ $y = 297 \pm 10$ $Y=170 \pm 10$

7500K: $x = 299 \pm 10$ $y = 315 \pm 10$ $Y=170 \pm 10$

6500K: $x = 313 \pm 10$ $y = 329 \pm 10$ $Y=190 \pm 10$

	Input Voltage Range	AC90-264V
	Frequency (Rating)	50 / 60Hz
	Frequency Range	47 - 63Hz
	Power Consumption	34W (Max), Under 2W at Complete Off mode Under 2W at Stand-by and Suspend mode.
	Current	1.5mA (AC 240V)
	Inlet connector type	3 polarity, 10A 250V 65°C VDE, UL CSA approved CEE input connector. EN60320 Class I standard compliant

Pin	Name	I/O	Definition
1	L	I	Live
2	N	I	Neutral
3	FG	I	Frame GND

2.2 LCD without Acrylic Panel

2.2.1 For QDI Panel (QDI 17EL0707)

Item		Specifications	Remarks
LCD Module type		17.0" / 43.2 cm diagonal	
Display Type		Active matrix thin-film-transistor (TFT)	
Display Mode		TN, Normally White	
Resolution		1280(H) x 1024(V)	Aspect ratio 4:3
Active Display Area		337.92 (H) x 270.336 (V) mm	Unit: mm
Pixel Pitch		0.264(H) x 0.264(V)	Unit: mm
Color Depth		16.19 million color (6bit + FRC)	
Color Filter		RGB Stripe	
Surface Treatment		Anti-glare treatment of the front polarizer	
Viewing Angle (Typical)	Horizontal (Φ)	125 degrees (-60 to 65 degrees)	CR \geq 10(*2)
	Vertical (θ)	150 degrees (-75 to 75 degrees)	CR \geq 10(*2)
Contrast ratio		400:1 (typ)	
Luminance		250 (typ)	Unit: cd/m ² (*1)
Response time	Rise time	4ms(typ.)	Unit: ms
	Fall time	12ms(typ.)	Unit: ms
Back Light	Type	CCFL (x 4 pcs)	
	Life time	40,000 (min), 50,000 (typ)	Unit: Hours

2.3 Full Scan Capacity

In case the input video mode is not 1280 x 1024, the image area should be expanded to 1024x768 smoothly with the function of scaling engine.

Standard resolution: 1280 x 1024

Expand method: Full expand mode with smoothing as follows

Down scaling: Down scaling at over 1280 x 1024 mode

Table 2.3 Picture Size (In Full-Screen mode)

Multi-pixel mode	Input display	Expanded Rate		Expanded Resolution
	Resolution	Horizontal	Vertical	
Expansion	720x350	1.78	2.56	1280x896
Expansion	640x350	2.0	2.56	1280x896
Expansion	640x400	2.0	2.56	1280x1024
Expansion	720x400	1.78	2.56	1280x1024
Expansion	640x480	2.0	2.13	1280x1024
Expansion	800x600	1.6	1.71	1280x1024
Expansion	832x624	1.54	1.64	1280x1024
Expansion	1024x768	1.25	1.33	1280x1024
Expansion	1152x864	1.11	1.19	1280x1024
Expansion	1152x870	1.11	1.18	1280x1024
Expansion	1152x900	1.11	1.14	1280x1024
Expansion	1280x960	1.0	1.07	1280x1024
Standard	1280x1024	1.0	1.0	1280x1024
Down scale	1600x1200	0.8	0.85	1280x1024

2.4 85Hz Refresh Rate Support

Monitor should display 85Hz refresh rate mode as emergency mode.

Monitor should display "Input not Supported" warning menu at this mode.

2.5 White Color Temperature (T146 48K/60HZ, 1280 x 1024, Full Scan)

White color temperature is 4 preset as 9300,7500, 6500, user (Native)

Target of color setting

Color Temp.	Color Coordinate		Tolerance	Color Coordinate		Tolerance
	x	y		u'	v'	
9300K	0.283	0.297	±0.03	0.189	0.446	$\Delta u'v' \leq 0.01^*$
7500K	0.299	0.315	±0.03	0.193	0.459	$\Delta u'v' \leq 0.01^*$
6500K	0.3127	0.3291	±0.03	0.198	0.468	$\Delta u'v' \leq 0.01^*$

2.6 Check Power Manage Function

Monitor should enter to power saving mode if the following condition occurs.

Mode	Horizontal	Vertical	Power Supply	Input Timing	Power Consumption
On	ON	ON	240Vac	VESA 1024X768 (75Hz)	34W
Stand-by	OFF	ON	240Vac	VESA 1024X768 (75Hz)	2W
Suspend	ON	OFF	240Vac	VESA 1024X768 (75Hz)	2W
Off	OFF	OFF	240Vac	VESA 1024X768 (75Hz)	2W

3. External Inspection on the LCD Module

3.1 For QDI Panel (QDI 17EL0707 Rev.02)

External Inspection

Inspection item	Criteria	Reject count (N)
Black spot, White spot, Foreign circular Material Dent & bubble	$D > 0.5\text{mm}$	$N = 0$
	$0.5\text{mm} \geq D \geq 0.15\text{mm}$	$N \leq 3$
	$D < 0.15\text{mm}$	Don't care
	Minimum distance between defects: 10mm	
Scratches, lint L: length; W: width (mm)	$L > 4.0\text{mm}; W > 0.1\text{mm}$	$N \leq 0$
	$4\text{mm} \geq L \geq 2.0\text{mm}, 0.1\text{mm} \geq W \geq 0.01\text{mm}$	$N \leq 3$
	$L < 2.0\text{mm}, W < 0.01\text{mm}$	Don't care

Average Diameter: D

Length: L

The external visual inspection: The inspection shall be conducted by using a single 20W fluorescent lamp for illumination and the distance between the MODULE and the eyes of the inspector shall be 35 cm or more.

* The area for external inspection is active area plus 1.0mm width. (Upper, Lower, Left and Right)

Dot Defect

(1) Definition

a) Bright dot

The sub-pixel can be seen when using the 5% ND-Filter.

b) Scratches on the color filter (Bright dot count)

Count: defect area > 1/4 dot

No count: defect area < 1/4 dot

(2) Bright dot (Acceptable)

Green/Red/Blue dots: When the MODULE lights, dots appear bright in display at black picture. (V0)

Check pattern	Total Quantity
Black picture	≤ 3

2 adjacent 1 pair MAX

Green Bright dots 2 adjacent Nothing

Defect distance more than 10mm

(3) Black dots (Acceptable)

Black dots: When the MODULE lights, dots appear black in display at Green + Blue + Red picture.

Check pattern	Total
Green + Blue + Red Picture	Three picture position total 5 MAX

Two adjacent dots2 pair MAX

Defect distance more than 5mm

Three joined bright dots must be nil

(4) Total dot defect (Black & Bright)

Check pattern	Total Quantity
N/A	5 MAX

Display non-uniformity / Mura

There should be no distinct non-uniformity/ Mura visible through 5% transparency of filter.

Note: To make the special standard for the high percentage mura. Specification as the following list

Mura Type	Inspection criteria	Inspection method
Edge mura	ND filter 8%	Per Gray scale 32 pattern (not limited in each Gray scale pattern)
Spot mura	ND filter 8%	Per Each Gray scale pattern

4. Safety Test

- Destination: All over the world
- Applicable standards: UL/C-UL
- Unit class: Class I units (the units protected against electric shocks by protective earthing, or those equipped with 3-core power cords)
- Ratings: AC100 - 240V 50/60Hz 0.6A/0.3A

4.1 Input Current Measurements

Under the measuring conditions specified below, an input current should be measured while the 50Hz input voltage is maintained at 220V AC (+0 to -5V). The input currents measured should all confirm so they satisfy the judgment standard.

(1) Measuring conditions

- Condition of the set: ON mode
- Measuring conditions: The inspection signal is set at "1024X768 (75Hz)" and "white" is displayed throughout the screen. At that time, the brightness and contrast should be kept under the brightest condition.

(2) Judgment standard

- The input current should be kept below 0.35A +10%.

4.2 Power Source/Earth Connections

a. Checks on the power source/earth connections

The earth side of the cord or the earth wire of the inlet filter for the cord set should be visually checked to see that it is connected to the chassis block of the unit as specified below.

- 1) The earth wire color should be spiral of green and yellow. Units applicable to UL or C-UL
- 2) The earth wire should be firmly connected to the chassis block by the use of a screw (See Note) of 3.5mm \varnothing in diameter.

Note: Spring washers or star washers should be used, without fail.

b. Earth resistance testing

This testing should be carried out prior to the dielectric strength test.

The earth resistance should be 0.1 Ω or less when a current of 25A AC is carried between the earth side of the cord (the plug block or the section closest to the plug where no plug is provided) and the metallic block (the DVI connector) that is used as a safety earth for the unit.

Where the earth resistance exceeds 0.1 Ω , the condition should be still acceptable if the earth resistance is 0.1 Ω or less when the resistance of the power cord is excepted.

4.3 Dielectric Strength Test

To confirm the freedom from insulation breakdown, testing should be carried out under the conditions specified below.

1) Measuring conditions

- Measuring instrument: Dielectric strength tester (The specified voltage should be maintained in the state that a current of 10mA is carried.)
- Testing point: Between the electrical circuit block and the exposed metallic block (D-SUB connector)

Note: The electrical circuit block should mean the power input block (primary side). Testing should be carried out under the condition that both poles of the power plug are short-circuited. (Where a 3-core cord is used, the two poles other than the earth terminal should be short-circuited.)

2) Judgment standard

The freedom from insulation breakdown should be confirmed under the condition that the applied voltage is maintained at 1500V AC (+0 to 50V) for one minute.

Even though the result of this testing is OK, such a condition should be regarded as unacceptable if there is a leakage (flashing) around the section where the test voltage has been applied.

If the result of insulation resistance test is found unacceptable, to be carried out after this testing, such a condition should be regarded as that an insulation breakdown has occurred.

4.4 Leakage Current Test

A leakage current should be measured under the conditions specified below, in order to confirm that the requirements of the judgment standard are met.

1) Measuring conditions

- Measuring instrument: Leakage current meter (A 1500Ω resistor should be incorporated, together with a bypass capacitor of 0.15μF.)
- Testing point: Between the exposed metallic block (D-SUB connector) and Phases A and B of the power source.
- Condition of the set: A power cable should be connected without connecting a signal generator. The see-saw switch on the set side should be turned ON and OFF.

2) Judgment standard

The leakage current measured should be 1.5mA or less with an input of 240V AC × 1.06 +5/-0V (60Hz).

4.5 Insulation Resistance Test

An insulation resistance should be measured under the conditions specified below, in order to confirm that the requirements of the judgment standard are met.

1) Measuring conditions

- Measuring instrument: 500V DC MEGOHM Meter
- Testing point: Between the power circuit block and the exposed metallic block (D-SUB connector)
- Measured value readout: A test voltage should be applied for one minute and the resistance value should be read out thereafter.

2) Judgment standard: 10MΩ or more

5. Inspection of PLUG & PLAY Communication and OSM "MONITOR INFORMATION" for Model Name / Serial Number

5.1 System Connection

This system should be connected as shown below.

DDC Communication I/F BOARD

5.2 Input Signal

Horizontal synchronization frequency: Not specified.

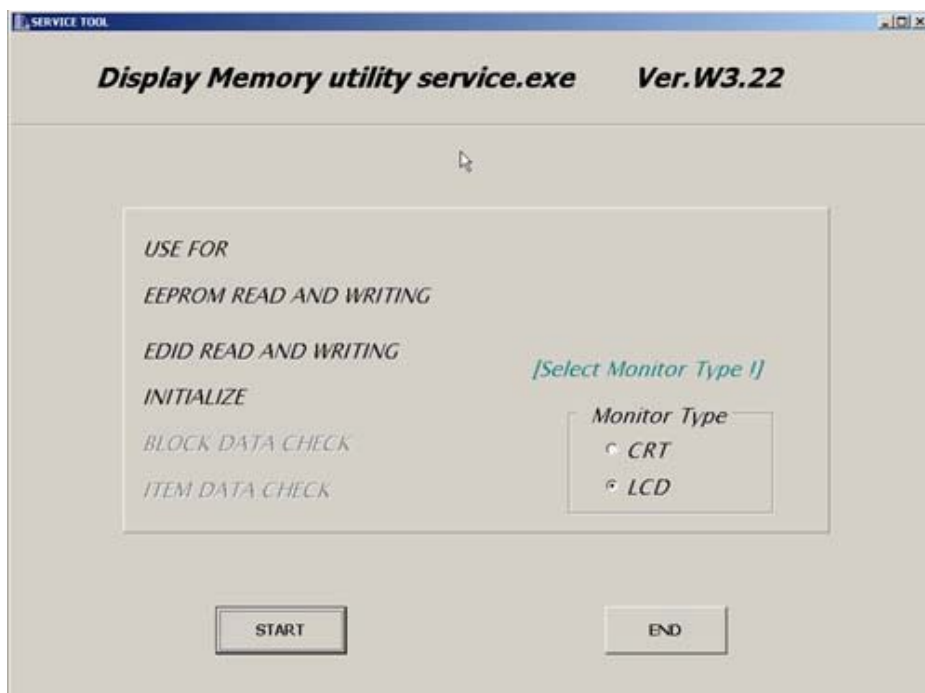

Vertical synchronization frequency: Not specified.

5.3 Program

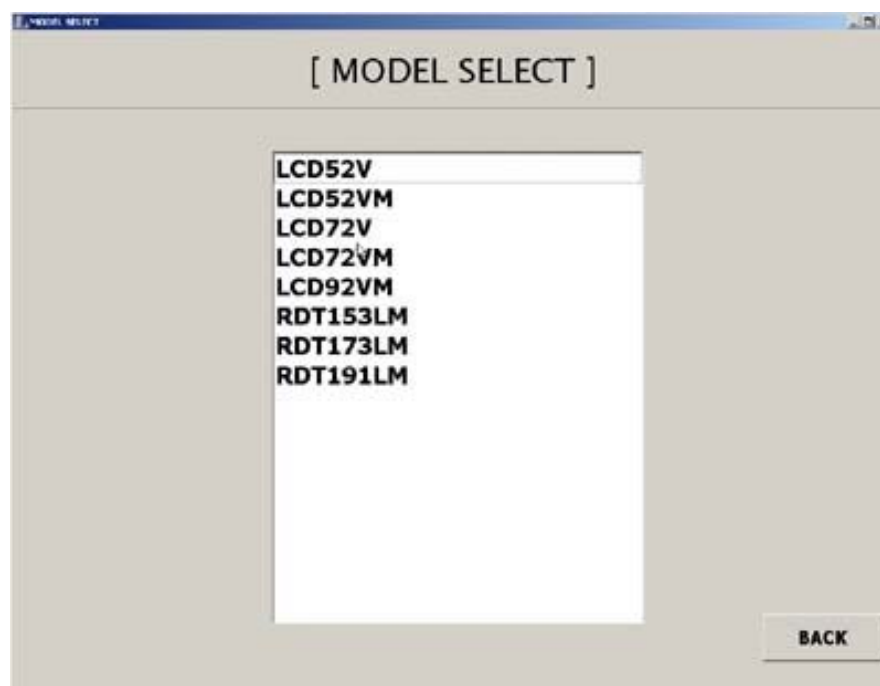

Service tool: Service tool Ver. W3.22

5.4 Operation

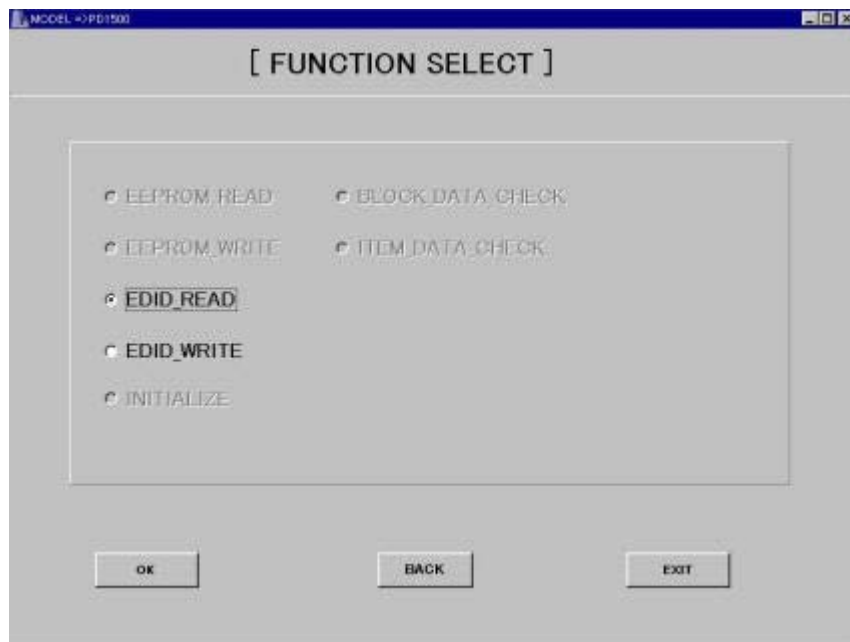

- 1) Connect the EDID data writing unit with jigs, etc.
- 2) Copy all the files of the service tool Ver. W3.22 in a proper directory.
- 3) Start [Service2.EXE] of the service tool Ver. W3.22
- 4) When the screen as shown below appears, check to [LCD] of [Monitor Type] and press the [START] button.

- 5) When the screen as shown below appears, adjust the cursor to [LCD72VM] and make a double click.

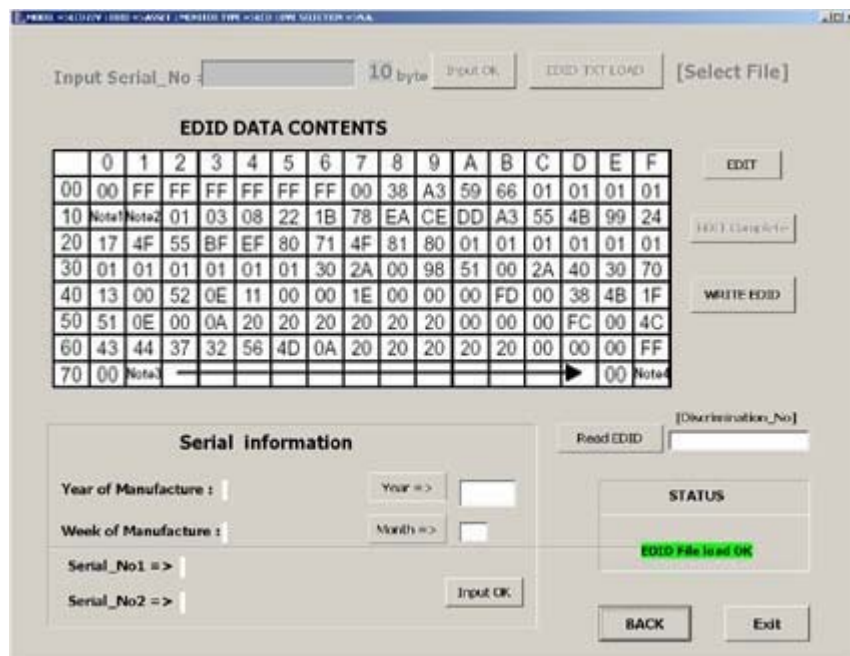

6) When the screen as shown below appears, check to [EDID_READ] and press the [OK] button.

7) When the screen as shown below appears, confirm that the correct data are displayed in the columns of EDID DATA CONTENTS and Serial information.

If all the displayed data are [FF] or the like, or if the serial number is different from that of the corresponding unit, then EDID data writing should be carried out.

8) When a screen of Item 6 is displayed by pressing the [BACK] button, check to [EDID_WRITE] and press the [OK] button.

- 9) When the screen as shown below appears, examine the serial number of the unit, enter an input in the column of [Input Serial No.] through the keyboard, and press the [Input OK] button. Enter an input in the column of [.Year=>] in manufactured year(A.D. four digits) and [Month=>] in manufactured month through the keyboard, and press the [Input OK] button.

Input Serial No: 35100002YA 10 byte Input OK EDID-TXT LOAD [Select File]

Week of manufacture = Month of manufacture × 4

Year of manufacture - 1990

Serial Number (ASCII coded)

If less than 13 char, terminate with 0Ah and fill the rests with 20h.

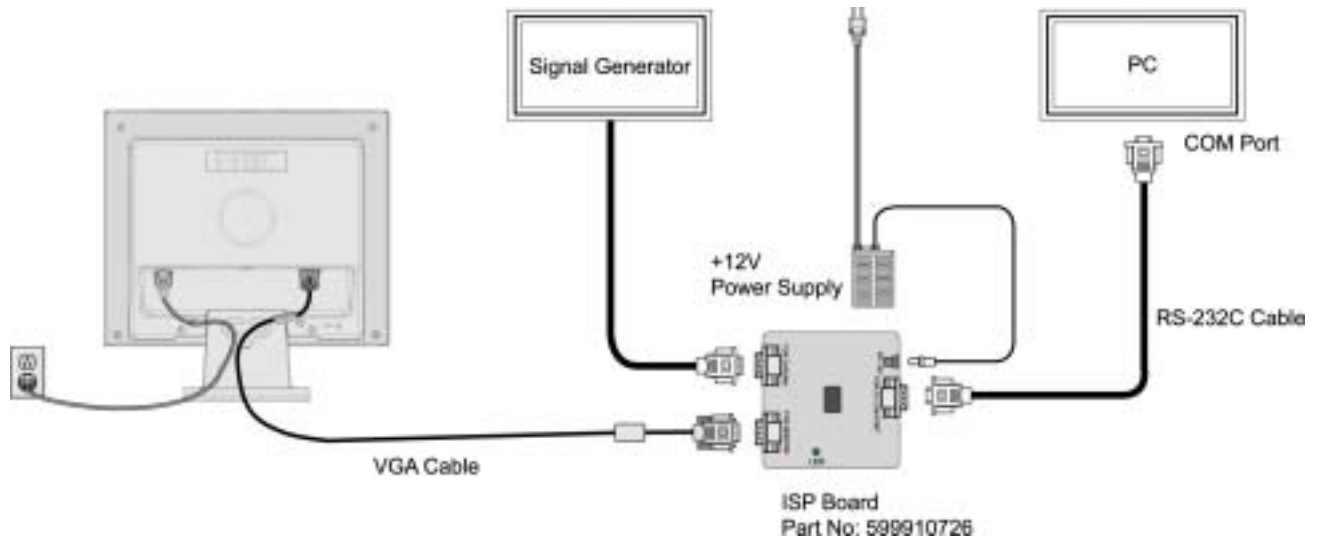

Checksum

The sum of entire 128 byte shall be equal to 00h.

5.6 OSM "Monitor Information" for Model Name / Serial Number

a). System Connection

This system should be connected as shown below.

ISP Board
(Part No: 599910726)

b). Input Signal

Horizontal synchronization frequency: Not specified.

Vertical synchronization frequency: Not specified.

c). Preparation

1. Turn on the PC, Chroma2226, and Chroma setting: Timng116/Pattern48 (640x480), and then connect the S/N recorder to PC and Chroma.
2. Ensure the date in PC is currently.

d). Program

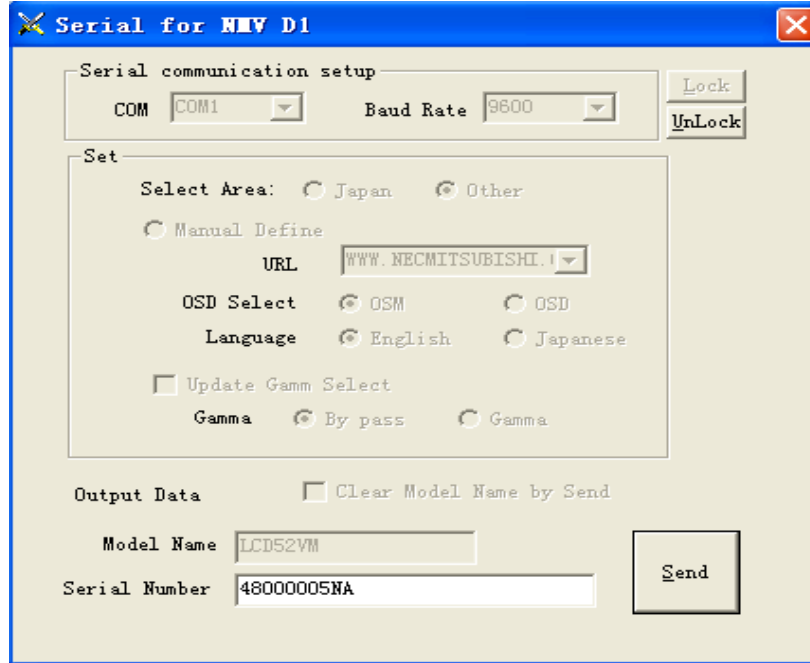

S/N Record Program (Part No: 599910727)

e). Operation Steps

S/N Record:

1. Connect the signal cable and S/N record. Select and run the right S/N record program, and the dialog box appear (shown as follows), and the options setting should accord with the figure shown as follow:

(COM: COM1; Baud Rate: 9600)

2. According to different sell region the contents is vary, there is a reference as follow Table shown:

S/N contents

Sell region	The shown web address (URL)	OSD select	Default language
Japan	WWW.NMV.CO.JP	OSD	Japanese
Other	WWW.NECMITSUBISHI.COM	OSM	English

3. Key in MODEL NAME and select the right options of the dialog box. After checked ok, the foreman or the charge should kick the “LOCK” button, the items mentioned above will be locked.
4. Scan 10 emics Barcode, kick the Enter or Send button, if shown: “Send Complete! “, means record successfully, kick Enter or kick Send button again, then press select key make the OSD on, select the Tool item, check the Model name, Web address (URL), OSD select and SN contents, if one of them doesn't tally with factual content, connect the lines compactly, record again.

Attached 1: Barcode sample

- Sign:**
1. Make sure the foreman or the charge should check the SN contents of the first set of each schedule OK and lock.
 2. If the model name is unconformity with the fact code, please inform the MK and RD-LCD to affirm.

6. Analog D-SUB Connector

Pin	Meaning	Pin	Meaning
1	Video input red	9	+5V (DDC)
2	Video input green	10	Sync. ground
3	Video input blue	11	Ground
4	Ground	12	DDC-Data
5	Ground	13	H. sync
6	Red video ground	14	V. sync
7	Green video ground	15	DDC Clock
8	Blue video ground		

7. Factory Preset Display Modes

The following are the most frequently used of the preset operating modes:

Mode	Horizontal frequency	Refresh rate	Screen resolution
Dos*	31.5kHz	70Hz	720x400
VGA	31.5kHz	60Hz	640x480
VGA	35.0kHz	67Hz	640x480
VGA	37.9kHz	73Hz	640x480
VGA	37.5kHz	75Hz	640x480
SVGA	35.1kHz	56Hz	800x600
SVGA	37.9kHz	60Hz	800x600
SVGA	48.1kHz	72Hz	800x600
SVGA	46.9kHz	75Hz	800x600
SVGA	49.7kHz	75Hz	832x624
XGA	48.4kHz	60Hz	1024x768
XGA	56.5kHz	70Hz	1024x768
XGA	60.0kHz	75Hz	1024x768
XGA	53.7kHz	66Hz	1024x768
	68.8kHz	75Hz	1152x870
	75.0kHz	75Hz	1280x960
	60.0kHz	60Hz	1152x960
	64.0kHz	60Hz	1152x1024
	80.0kHz	75Hz	1152x1024

8. Audio System

8.1 Audio Input

Connector type:	Φ3.5 stereo mini jack@ back side of monitor
Color of Connector:	Pantone284C (Light Blue)
Input level:	500mVrms
Input impedance:	47kΩ

8.2 Headphone Output

Output power:	1.0 W rms/CH @ 1KHz
Total harmonic distortion(@ 1W):	<1%
S/N ratio:	50db
Connector type:	Φ3.5 stereo mini jack@ front side of monitor
Output power:	1W + 1W
Output level:	Same loudness level of sound as build-in speaker. (headphone impedance: 32Ω)
Color:	Gray (For white model) Black (For black model)

8.3 Built-in speakers

Type:	Micro Speaker (8Ω, 1W + 1W) without box
Nominal Impedance:	8 Ohm
Maximum Input Power:	1 W/CH
Resonance Frequency:	less than 450Hz
Speaker Size:	40 x 20 mm

When headphone connected to headphone jack, speaker outputs should be disabled.

8.4 Characteristic

Frequency band:	250Hz to 20kHz
Total harmonic distortion:	3% (condition: 1W, all black) 2% (condition: 50mW,all black)
Remaining behind hum:	5mVp-p (max) (Any noise shall not be heard from the point of 30cm distance from the monitor.)
Remaining behind buzz:	5mVp-p (max) (Any noise shall not be heard from the point of 30cm distance from the monitor.)
S/N ratio:	40dB (condition: all black)
S/buzz ratio:	40dB (condition: all white, contrast max)
Channel separation:	30dB
Right/left output deviation:	±1%

Sound noise by vibration of cabinet should not be heard at condition of 70% volume, 1kHz 500 mVrms input, 250Hz to 20kHz range.

8.5 Audio Control

Following functions must be controlled by OSM.

Volume Control

Mute function

Speaker Output Power at 1kHz, 500mVrms, volume max 1 + 0.5W

Volume control characteristic is similar as gamma 2.2 curve.

8.6 Audio Test

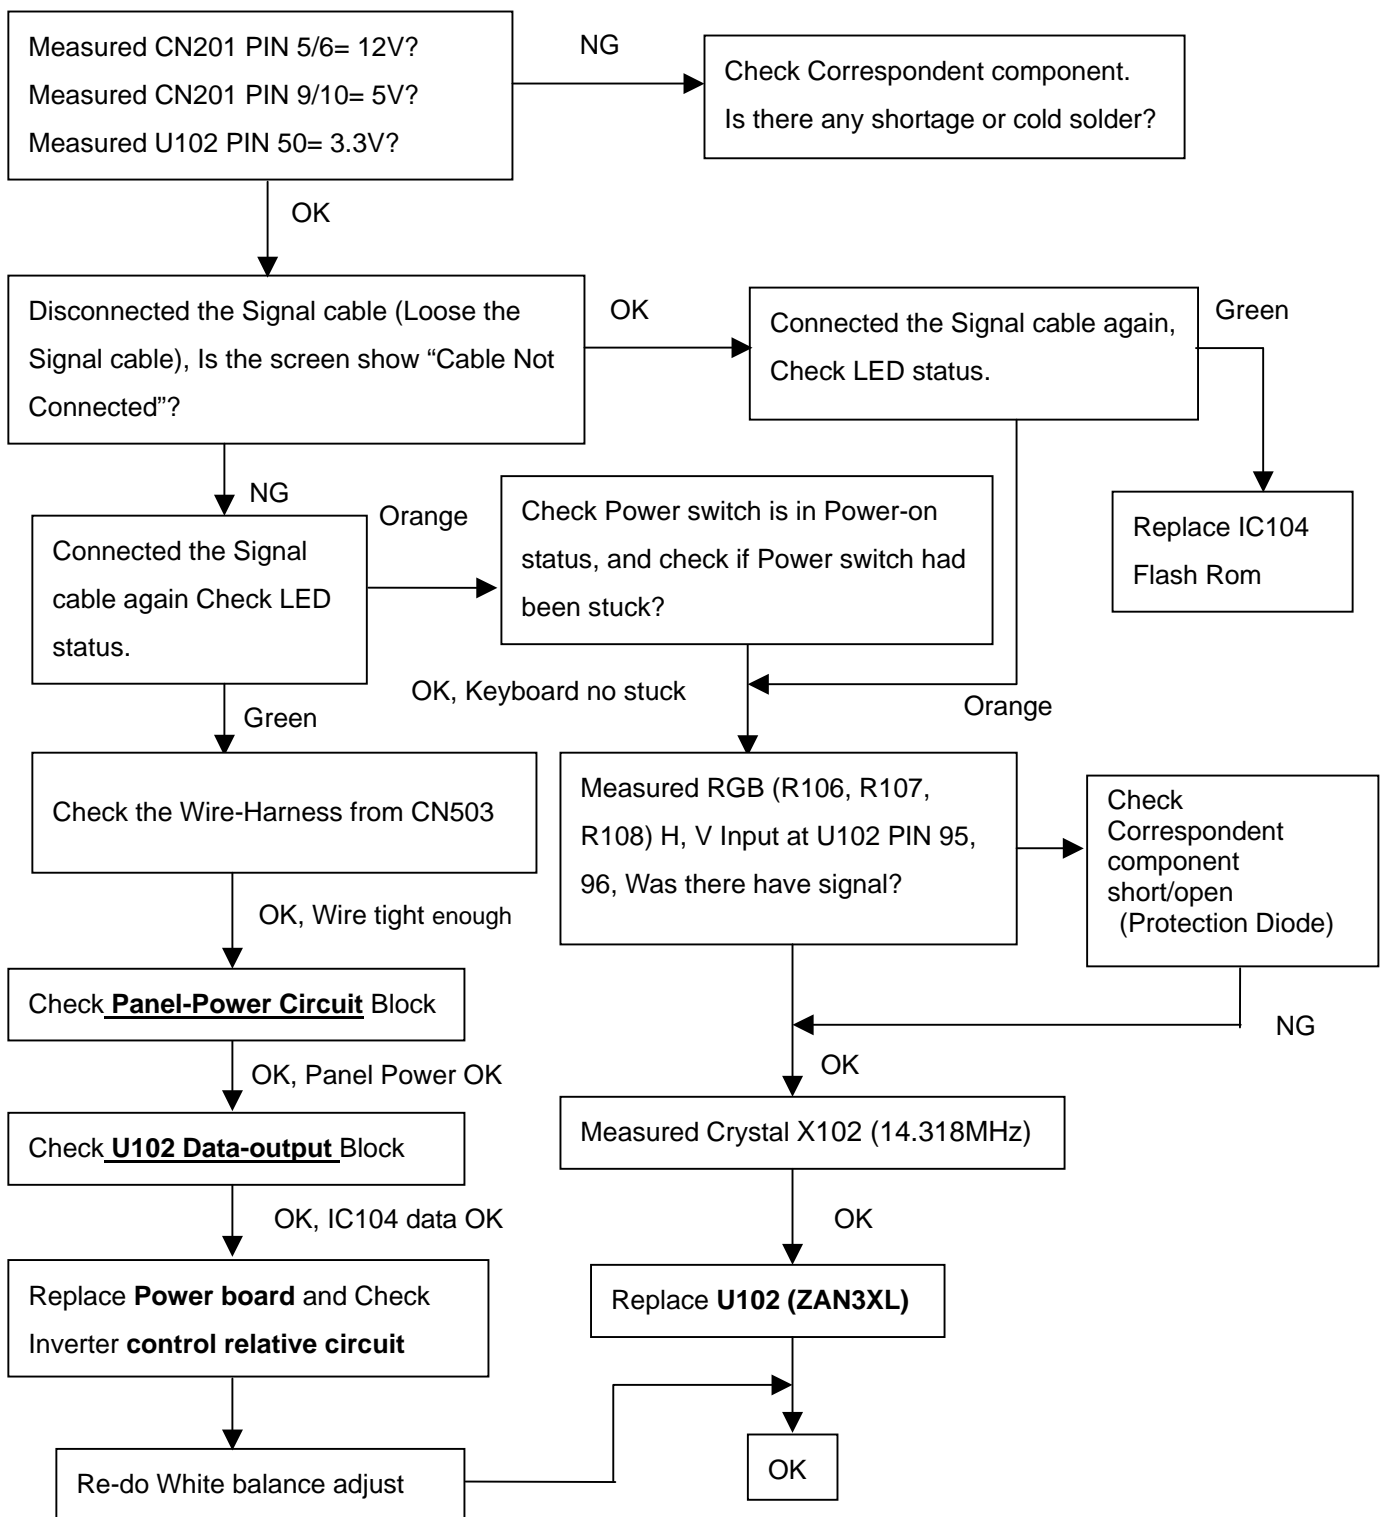

- During Volume function operate, Volume Icon and slide bar color is changed from Normal condition.
- Can you hear the sound increasing or decreasing, During Volume function operate.
- Can you hear the sound by the earphone.
- Can you hear the sound without the earphone when earphone is connected.

1. General Description

The LCD MONITOR contains a panel, a main board, an inverter/power board, audio board and keyboard.

2. Main Board

The main board contains panel control logic, brightness control logic, DDC and DC convert DC circuit etc.

2.1 Description of Main Chips

MCU: 8051 SCM, main function is power control, OSD control, frequency calculation, RS232 communication and etc.

GMZAN3XL: integrate ADC, OSD, SCALER, convert analog RGB into digital and zoom and shrink scaling output to timing control circuit of LCD panel.

AIC1084: DC power converter, used to convert 5v to 3.3v.

AIC1777A: DC power converter, used to convert 3.3v to 1.8v.

24C02: 1K EEPROM, is used to save DDC data which contains the basic parameter of production facility, supplier, product name, maximum H-frequency, support resolution and so on.

24C16: 4K EEPROM, is used to save Auto configuration data, white balance data, the state of power key and power on time counting data.

2.2 MCU

Oscillator: Provides clock frequency of 14.318MHZ for U101, C147, C148 is used for compensating frequency. Capacitance for both is 33PF/50V.

Reset: Consists of R122, R188, active low.

Communication: Contains AD0-AD3 (DATA), ALE (HCLK), AD4 (HFS), INT0 (INTERRUPT REQUEST) in the series communication between MCU and GMZAN3XL, because of some TIMING input condition, the GMZAN3XL causes interruption and then it exports INT0 to MCU.

OSD control: PIN 25-29 is keyboard OSD function control.

White-balance adjust control: PIN 11 (RXD) and PIN 13 (TXD) are used for adjusting white-balance while in the factory mode.

VGA-CON: PIN 24 is no signal test pin, it is high level at no signal, and low when connected to signal.

Power supply, Ground: PIN 44, PIN 35 are the power supply pins, PIN 22 connects ground.

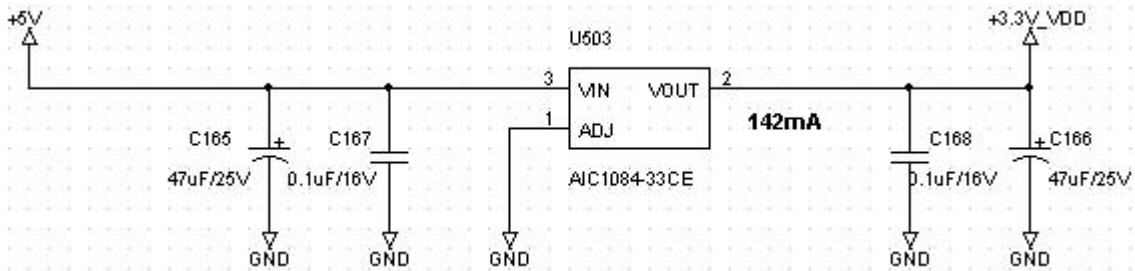

2.3 GMZAN3XL

The GMZAN3XL is a graphics display processor and provides all the key display functions required good quality image on a LCD panel. The integrated functions include a high-speed triple-ADC and PLL, a high quality zoom and shrink scaling engine, an on-screen display (OSD) controller, digital color controls and LVDS Transmitters. The GMZAN3XL provides a front-end analog interface with standard VGA compliance and an output at industry standard LVDS interface for speed up to XGA and SXGA respectively.

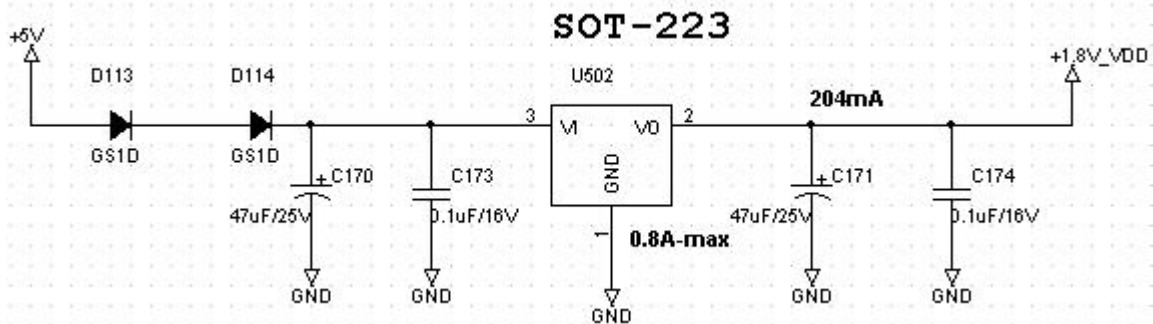

Pin name	I/O	NO	Describe
RED+	I	77	Positive analog input for RED channel
RED-	I	78	Negative analog input for RED channel
GREEN+	I	74	Positive analog input for GREEN channel
GREEN-	I	75	Negative analog input for GREEN channel
BLUE+	I	70	Positive analog input for BLUE channel
BLUE-	I	71	Negative analog input for BLUE channel
HSYNC	I	95	ADC input horizontal sync
VSYNC	I	96	ADC input vertical sync

CVDD_18	I	31/47/65/67/92/99	Core VDD (1.8V)

2.4 DC to DC

The required power supply is different for each chip, and the voltage of 12v, and 5v offered by PWPC can't reach the requirement, so we deal with this problem by means of two pieces of DC TO DC chips(AIC1084, BS1834). The circuit diagrams are as follows:

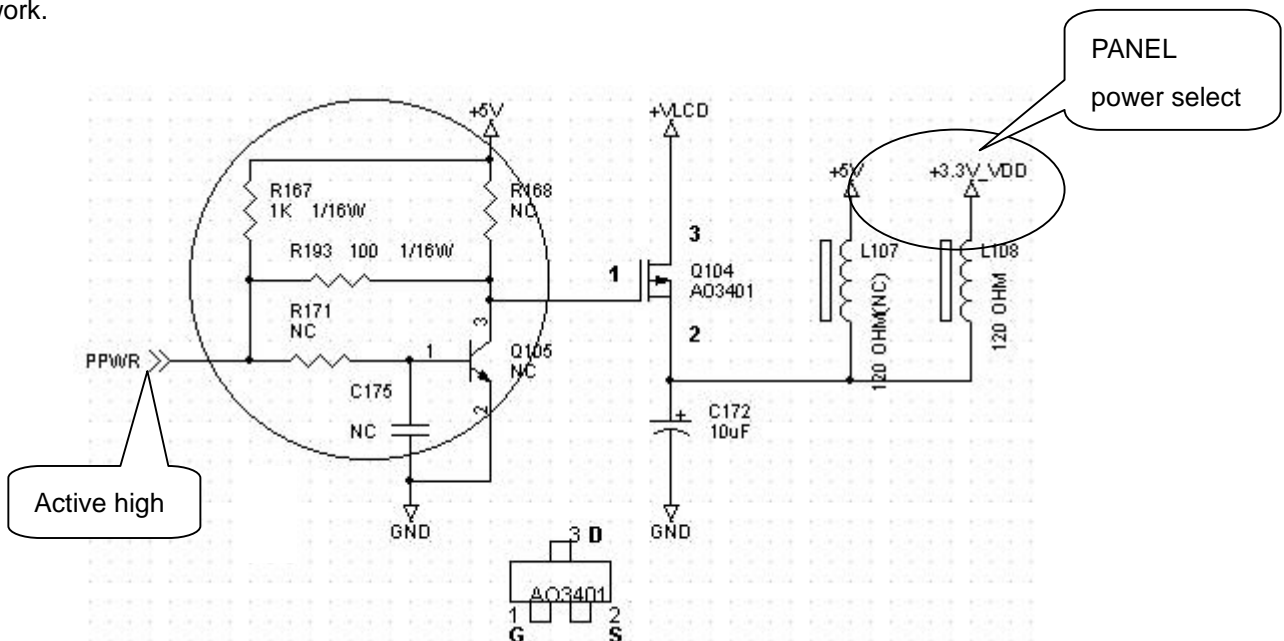

5V TO 3.3V

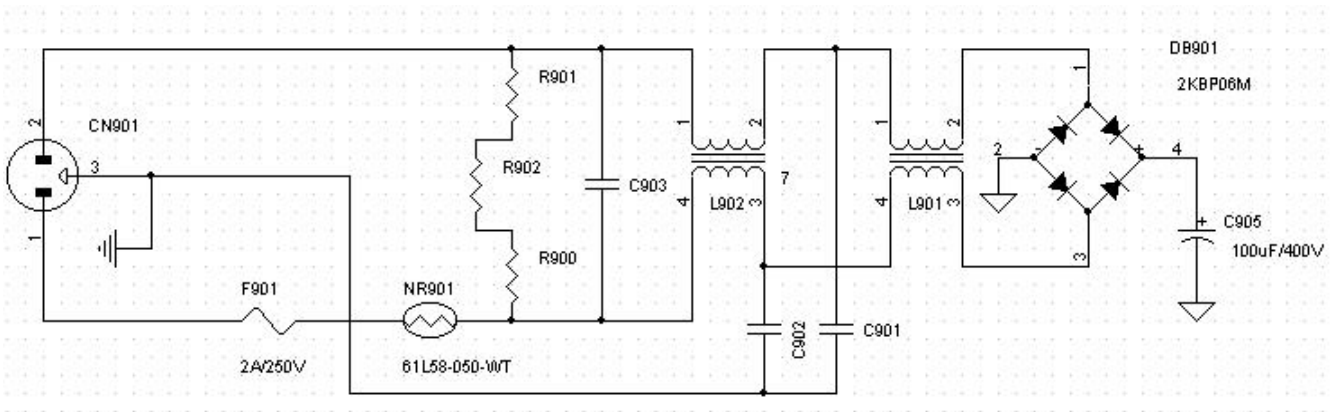

5V TO 1.8V

2.5 Panel Control Circuit

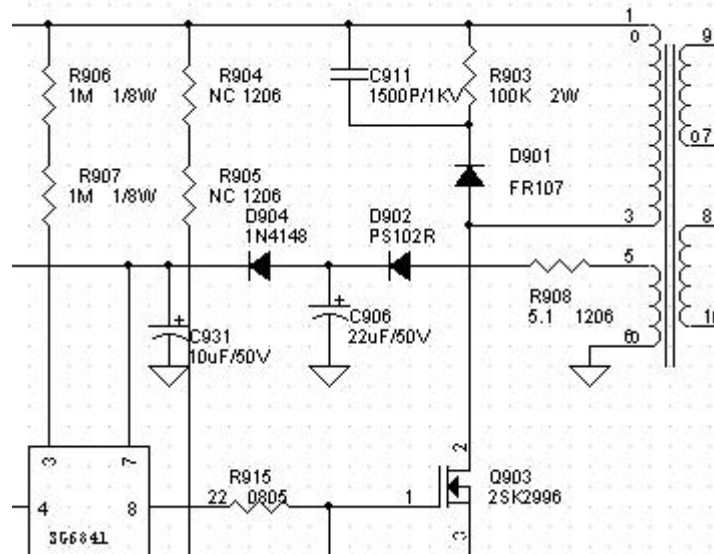

The high level output from PIN 30 of U101 makes Q105, Q104 break through, and offer 3.3V to panel when work well. The output is low level when it's saving energy state and Q105, Q104 break off, so the panel doesn't work.

Rectifier and filter circuit: The AC input is changed to a high DC voltage. The magnitude is a product of 1.414 to AC after it is converted by a bridge rectifier (BD901) and filtered by the capacitor (C905).

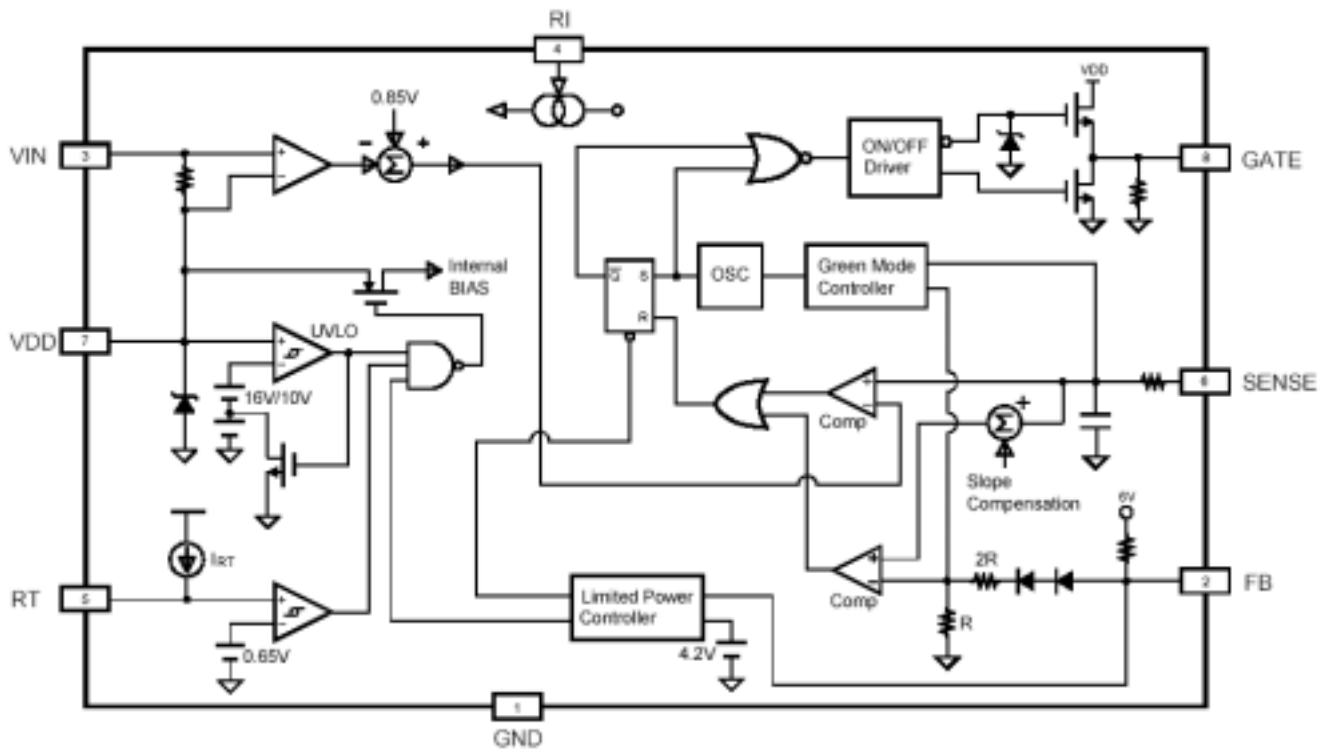

Start-up circuit: After being converted and filtered, the high DC voltage travels through R906, R907 as they dissipate a portion of the voltage. Start-up begins when the lowered voltage is supplied at a current of 30uA to IC901 (SG6841D). The output pulse makes the switch-power circuit work. The voltage produced at the two terminals of T901 is sent to PIN 7 of IC901 after being commuted by D902 and filtered by C907. The start-up process is ended.

SG6841: PWM. It requires low start-up current (30uA) and low working current (3mA). It contains functions such as low-voltage protection, over-current protection, over-voltage protection, Temperature protection, etc. The function of each pin and the inside circuit diagram are as follows:

Pin	NAME	FUNCTION	Pin	NAME	FUNCTION
1	GND	Ground	5	RT	Temperature protection
2	FB	Feedback voltage input	6	SENSE	Current test pin
3	VIN	Start-up current input	7	VDD	Power supply
4	RI	Reference setting	8	GATE	PWM drive output

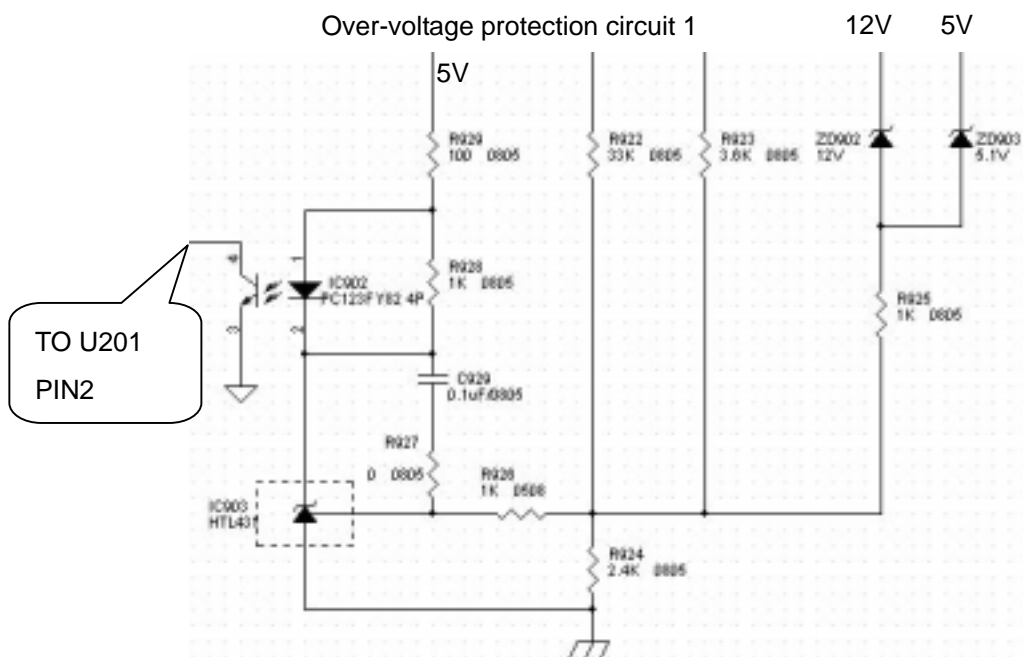

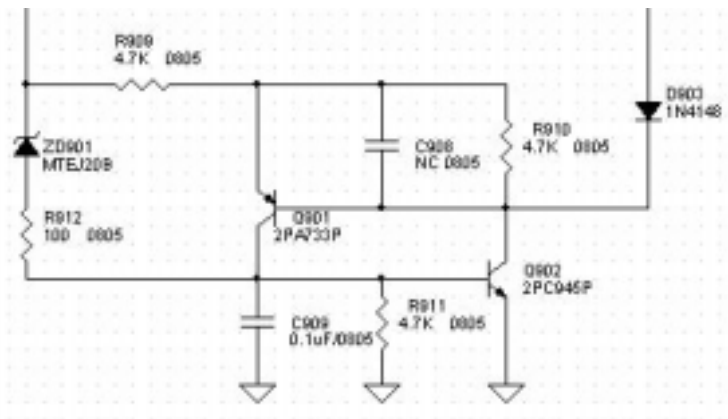

Protection circuit: over-voltage protection:

1. The voltage output across terminals 5-6 of T901 increases when the voltage of electric net exceeds its maximum. When the output exceeds 20V, ZD901 will conduct, and voltage will be applied across R912. Q902 will turn on when the voltage across R911 reaches 0.6V, and the voltage of the Base of Q901 will be pulled down, Q901 gets through. 15V benchmark voltage of PIN7 connects to grounding through R909, R910, Q902. So it cuts off the supply to IC and acts as over-voltage protection.

2. ZD902 or ZD903 will break down when 12V or 5V DC voltage increases, which leads to the light inside the photo electricity coupling component gets brighter abnormally, PIN 2 connects to grounding through photosensitive transistor, then it cuts off the pulse output. That is also effective way for over-voltage protection.

Temperature protection: When the working temperatures of components in the circuit exceeds a particular temperature, the temperature-protection component inside the IC connects a resistor from PIN 5 to ground to test the temperature. The pulse output is cut off instantly when the voltage of PIN 5 is lower than 0.65V. Completing over-temperature protection.

Over-current protection: The voltage across R917 which is a current test resistor will be applied to the in-phase output port of over-current test comparison unit in SG6841D. As long as the voltage exceeds 1V, the current protection circuit inside SG6841D will start up; Then PIN 8 is closed, completing over-current protection.

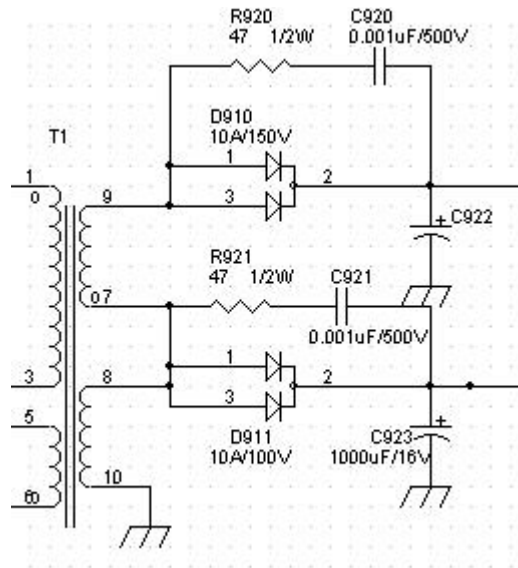

Over-voltage protection circuit 2

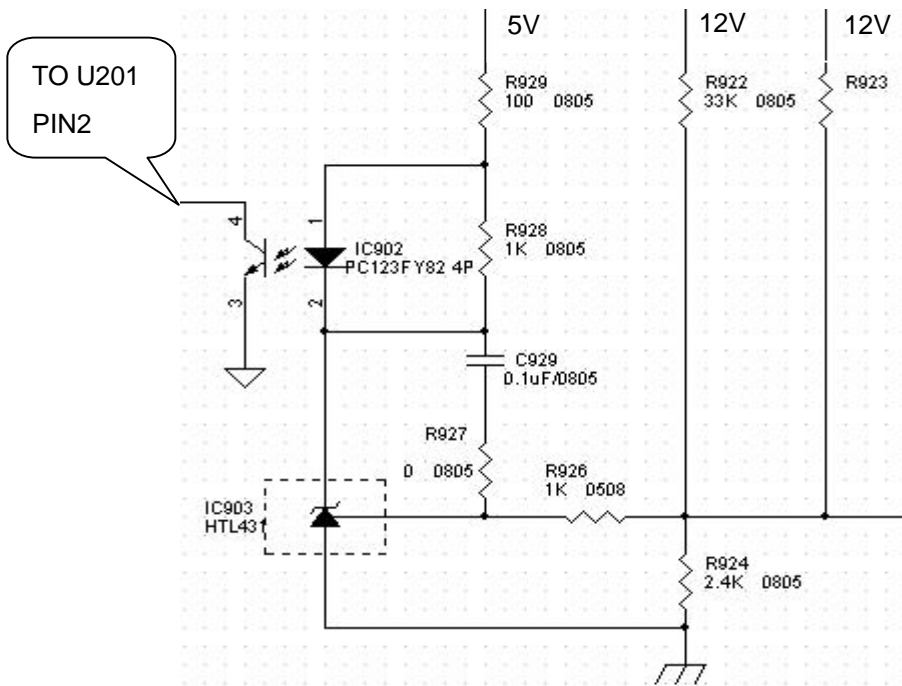

Commute and filter output circuit:

When PIN 8 of IC901 sends a high pulse, current passes through Q903 and produces a current in the primary coil of T901 (pin 1 +, pin 3 -). This produces a reverse electromotive force (EMF) in the secondary coil. Energy is stored in the secondary coil because D910, and D912 are closed. When PIN 8 of IC901 sends a low pulse, Q903 is closed.

When the primary coil produces a reverse current EMF, the secondary coil will produce a reverse EMF. At that time D910, D911 conducts with a voltage output of 12V is filtered through C922, C923. The RC circuit R920, C920 will absorb the surge voltage produced by D910, and R921 and C921 will absorb the surge voltage produced by D911.

Circuit for steadying voltage: The rising of electric supply voltage can result in the increase of output voltage. This leads to the increase of the current that flows through photoelectric coupling unit. The brighter the light produced inside the photoelectric coupling unit, the more easily the current can get through the photosensitive side, due to its lower resistance. That's the reason for the decrease of voltage at PIN 2. When the voltage is applied to the reverse-phase terminal of error amplifier inside SG6841D, it controls the duty of pulse output and reduces the voltage output. This process stabilizes the output. As the voltage decreases, the same principle is applied to steady the output.

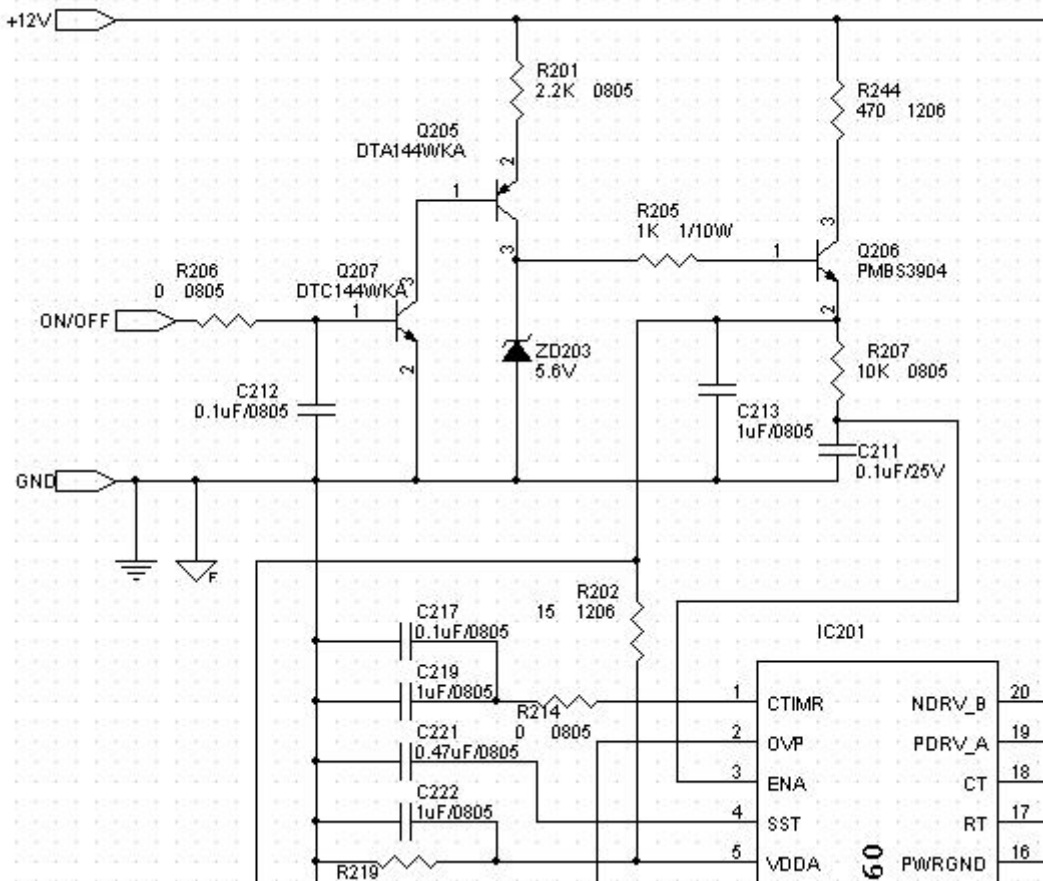

3.2 Inverter

Input interface section:

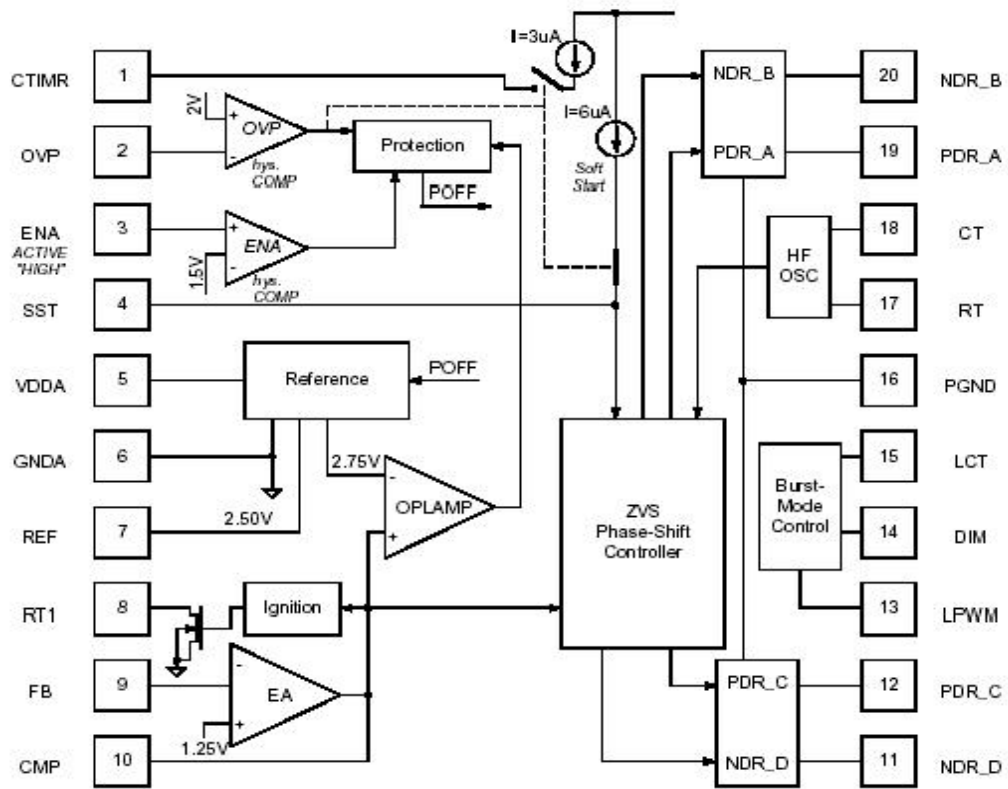

1. 12V DC input, , provided by power section;
2. ON/OFF enable signal, , provided by GMZAN3SL from the main board with value of 0V or 3V. When OFF=0V, the inverter doesn't work, while OFF=3V, it works under normal situation.
3. DIM signal for luminance modulation, offered by GMZAN3SL in the main board with its range of 0~5V. The Inverter offers different currents to the loads because of the different feedback of voltage to the feedback-terminal of PWM. The smaller the value of DIM, the smaller the current output of Inverter, the darker the brightness.

Voltage start-up circuit: It consists of a PNP, and two NPN transistors with two working stages. The first stage: When the ON/OFF enable voltage is 0V, Q207, Q205 and Q206 are closed. So the DC voltage at the emitter of Q206 can't be applied to PIN 3 and PIN 5 of IC201. The inverter will not work because there are no pulse output at PIN 11, PIN 12, PIN 19 and PIN 20. . The second stage: When the ON/OFF enable voltage is high, Q207, Q205 and Q206 get through. Then 12V voltage is applied to PIN 3 and PIN 5 of IC201 resulting in the operation of the IC. IC201 produces a pulse output to the control switch transistor, and the Inverter work applying high voltage to the backlight.

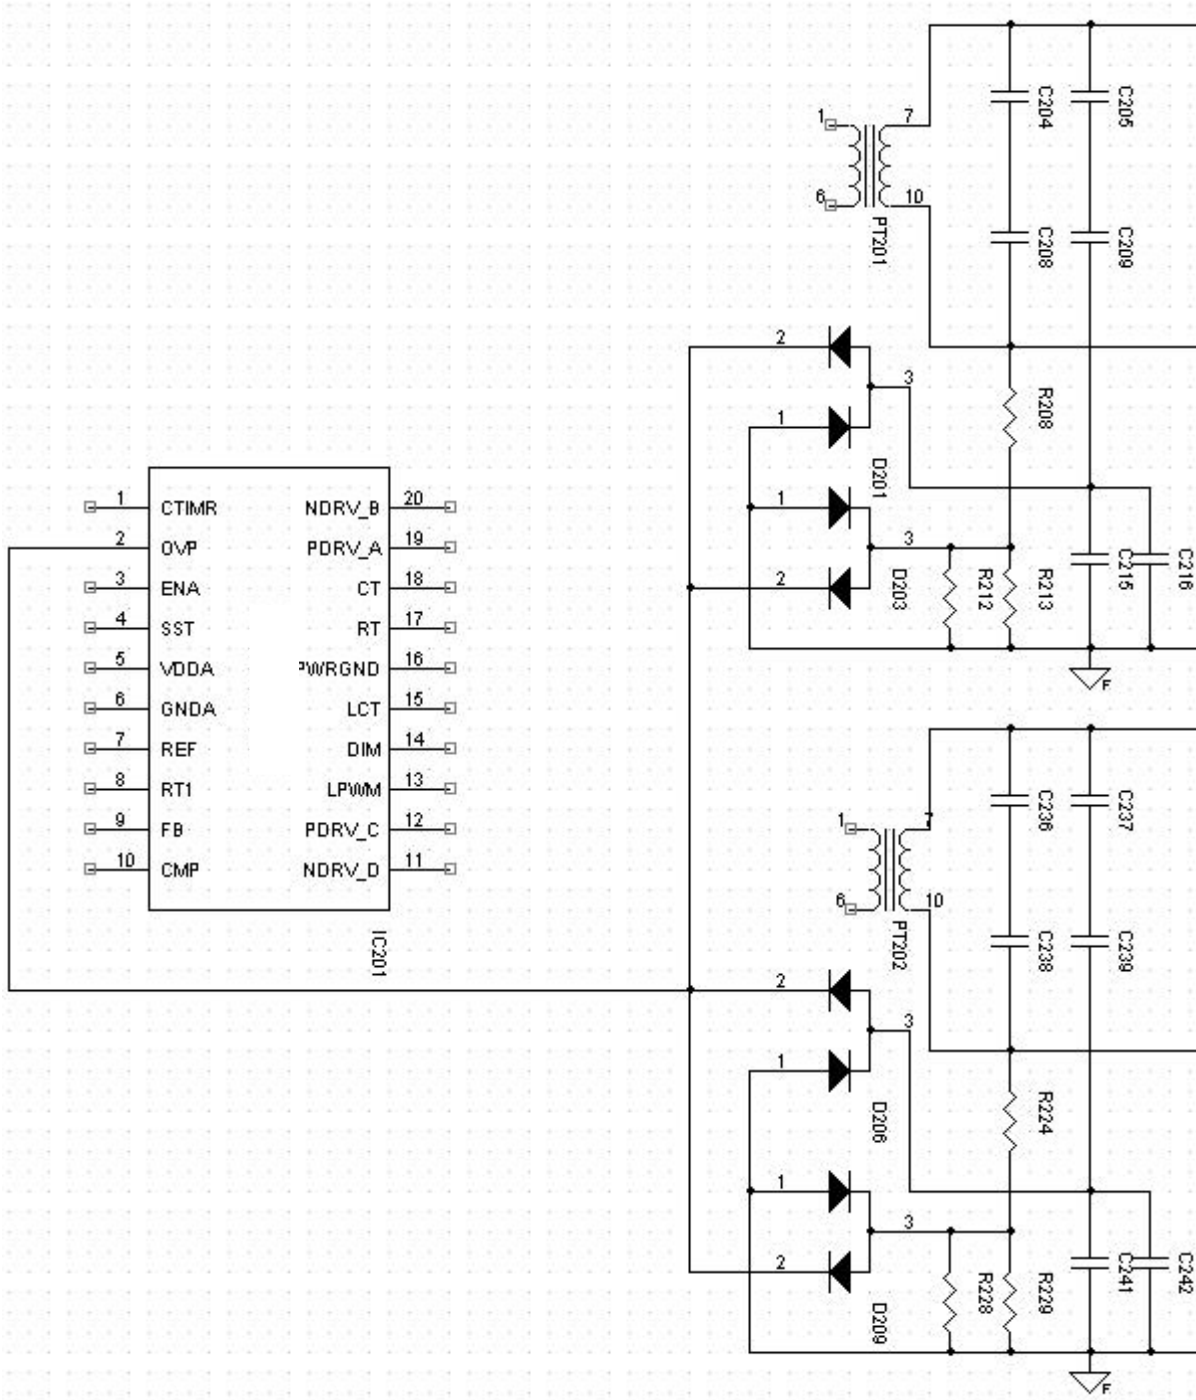

OZT1060: It is a unique, high-efficiency, Cold Cathode Fluorescent Lamp (CCFL) backlight inverter controller that is designed for wide input voltage inverter applications. Additionally, the OZ1060 performs the lamp dimming function with an analog voltage or low frequency Pulse Width Modulation (PWM) control. The OZ1060 operates at a single, constant frequency in a phase-shift PWM mode. Intelligent open-lamp and over-voltage protections provide design flexibility so various transformer models/manufactures may be used. The built-in burst mode control provides a wide dimming range and simplifies the application circuit designs. Both operating and burst-mode frequencies are user-programmable parameters. The function of each pin and the circuit diagram inside are as follows:

Names	Pin No.	I/O	Description
CTIMR	1	I	Capacitor for CCFL ignition duration
OVP	2	I	Over Voltage Protection Input $V_{th}=2.0V$
ENA	3	I	Enable input, TTL signal is applicable
SST	4	I	Soft-start capacitor
VDDA	5	I	Voltage source for the IC
GNDA	6	I	Analog signal ground reference
REF	7	O	Reference voltage output
RT1	8	I	Resistor for programming ignition frequency
FB	9	I	CCFL current feedback signal
CMP	10	O	Compensation output of the current error amplifier
NDRV_D	11	O	NMOSFET drive output
PDRV_C	12	O	PMOSFET drive output
LPWM	13	O	Low-frequency PWM signal for burst-mode dimming control
DIM	14	I	Input analog signal for burst-mode dimming control
LCT	15	I	Triangular wave for burst-mode dimming frequency
PGND	16	I	Power ground reference
RT	17	I	Timing resistor set operating frequency
CT	18	I	Timing capacitor set operating frequency
PDRV_A	19	O	PMOSFET drive output
NDRV_B	20	O	NMOSFET drive output

Protection circuit: Over-voltage protection: The rising of output voltage can result in the increase of D201, D203, D206 and D209 commute output voltage, and When OVP (PIN 2 of IC201) reaches the 2.0V threshold, PIN 1 (CTIMR) of IC201 charges the capacitor with a 3.0uA current. When CTIMR voltage reaches 3.0V, the IC201 shuts down (latch). Open-lamp protection: when the CCFL is suddenly removed or gets damaged/open during operation, the lamp current is lost and thus FB (PIN 9 of IC201) drops. This causes CMP (PIN 10 of IC201) to rise and when it reaches the 2.75V threshold, the IC201 shuts down (latch); additionally when SST (PIN 4 of IC201) reaches a threshold about 1V below the VDDA (PIN 5 of IC201) voltage. For a nominal VDDA of 5.0V, the threshold is 4.0V. then IC201 shuts down (latch) as well.

Replacement Parts List

REVISION HISTORY

Revision	Revision
New Issue (1st Edition) 2004/10/20	

PRINTING THE ELECTRONIC DOCUMENT

The PDF of this service manual is not designed to be printed from cover to cover. The pages vary in size, and must therefore be printed in sections based on page dimensions.

NON-SCHEMATIC PAGES

Data that does NOT INCLUDE schematic diagrams are formatted to 8.5 x 11 inches and can be printed on standard letter-size and/or A4-sized paper.

SCHEMATIC DIAGRAMS

The schematic diagram pages are provided in two ways, full size and tiled. The full-sized schematic diagrams are formatted on paper sizes between 8.5" x 11" and 18" x 30" depending upon each individual diagram size. Those diagrams that are LARGER than 11" x 17" in full-size mode have been tiled for your convenience and can be printed on standard 11" x 17" (tabloid-size) paper, and reassembled.

TO PRINT FULL SIZE SCHEMATIC DIAGRAMS

If you have access to a large paper plotter or printer capable of outputting the full-sized diagrams, output as follows:

- 1) Note the page size(s) of the schematics you want to output as indicated in the middle window at the bottom of the viewing screen.
- 2) Go to the File menu and select Print Set-up. Choose the printer name and driver for your large format printer. Confirm that the printer settings are set to output the indicated page size or larger.
- 3) Close the Print Set Up screen and return to the File menu. Select "Print..." Input the page number of the schematic(s) you want to print in the print range window. Choose OK.

TO PRINT TILED VERSION OF SCHEMATICS

Schematic pages that are larger than 11" x 17" full-size are provided in a 11" x 17" printable tiled format near the end of the document. These can be printed to tabloid-sized paper and assembled to full-size for easy viewing.

If you have access to a printer capable of outputting the tabloid size (11" x 17") paper, then output the tiled version of the diagram as follows:

- 1) Note the page number(s) of the schematics you want to output as indicated in the middle window at the bottom of the viewing screen.
- 2) Go to the File menu and select Print Set-up. Choose the printer name and driver for your printer. Confirm that the plotter settings are set to output 11" x 17", or tabloid size paper in landscape () mode.
- 3) Close the Print Set Up screen and return to the File menu. Select "Print..." Input the page number of the schematic(s) you want to print in the print range window. Choose OK.

TO PRINT SPECIFIC SECTIONS OF A SCHEMATIC

To print just a particular section of a PDF, rather than a full page, access the Graphics Select tool in the Acrobat Reader tool bar.

- 1) To view the Graphics Select Tool, press and HOLD the mouse button over the Text Select Tool which looks like: . This tool will expand to reveal to additional tools. Choose the Graphics Select tool by placing the cursor over the button on of the far right that looks like: .
- 2) After selecting the Graphics Select Tool, place your cursor in the document window and the cursor will change to a plus (+) symbol. Click and drag the cursor over the area you want to print. When you release the mouse button, a marquee (or dotted lined box) will be displayed outlining the area you selected.
- 3) With the marquee in place, go to the file menu and select the "Print..." option. When the print window appears, choose the option under the section called "Print Range" which says "Selected Graphic".

Select OK and the output will print only the area that you outlined with the marquee.
