## Preface

A beel is a term that denotes a lake-like wetland with static water (as opposed to moving water in rivers and canals - typically called khaals), in the Ganges – Brahmaputra - Meghna flood plains of Bangladesh. In other words, beel is a large surface waterbody that accumulates surface runoff water through internal drainage channels; these depressions are mostly topographically lowlands produced by erosions and are seen all over Bangladesh (Banglapedia, 2014)). They are small saucer-like depressions of a marshy character. Many of the beels dry up in the winter but during the rains expand into broad and shallow sheets of water, which may be described as fresh water lagoons.

Beels can be formed due to many causes. In some cases, a string of them is found along a line of drainage, suggesting that they are the remains of some great river, which centuries ago deserted its channel in favour of a new one somewhere else. In other cases, they are probably due to the action of rivers, which by centuries of silt deposits have raised their beds and marginal banks so high that they flow above the level of the surrounding area. The land between a pair of parallel rivers thus forms a kind of trough in between. The rivers, on the other hand, cannot overflow their banks into these depressions (during normal floods) as they themselves are locked within their channels by high levees.

Beels are mainly fed by surface runoff water. A few larger ones are fed by floodwater during the wet season from the parent river channel. Normally, beels remain deeply flooded for most of the wet season and the rims are primarily used for either boro cultivation or deepwater rice. Like baors, beels are also important wetlands and regarded as valuable fish and wildlife habitat.

Bangladesh has a significantly vast number of beels in all over the country, except in the hill tracts in the south eastern part. In the active floodplains of the Surma-Meghna, the Brahmaputra-Jamuna, and the Ganges-Padma river systems, there are several large and small beels. Some of the most well-known beels are Chalan beel, Gopalganj-Khulna beel, Meda Beel, Aila beel, Dekhar beel, Kuri beel, Erali beel, Baikka beel and Arial beel etc. Regionwise, in the northwest some beels of considerable sizes are Bara Beel at Pirganj, Tagrai Beel at Kurigram, Lunipukur at rangpur, Bara Mirzapur Beel at Narail and Keshpathar at Bogra. The old river course of Atrai is marked by some beels such as Chakchaki, Sabul, Ghugri, Kanchan, Manda, Utrail, Hilna, Kumar and Shona. In the southern region, important beels are Boyra,

Dakatia, Bara, Kola, Patla, Chatal and Srirampur. In the central part, Katla, Chatal, Nagarkanda, and Chanda are important beels. In eastern areas, such beels are smaller in size. In the northeast, beels of Haor Basin (Sylhet Basin) area merge together in the wet season appearing like vast bodies of water.

Most of these large beels have shrunk quite considerably in recent decades. For instance, in the early 19th century Chalan Beel used to cover an area of about 1,085 sq km but it was reduced to 368 sq km in 1909, of which only 85 sq km remains underwater throughout the year. It has since shrunk to only 26 sq km (Banglapedia, 2014).

It is reported that there are 6300 beels in the Haor districts (Sunamganj, Sylhet, Habiganj, Maulavibazar, Netrakona, Kishoreganj & Barhmanbaria) alone (FAP 6, 1994). They are of varying sizes, out of which about 3,500 are permanent and 2,800 are seasonal. The names of some notable and identified beels are listed in this Annexure.

Considering the unique hydrological characteristics of floodplains and haor region, this Annexure has been divided in two parts.

- A. Beels of Flood Plains and
- B. Beels of Haor Districts

The data of Beels were collected from the National Water Resources Data Base (NWRD) of WARPO.

We deeply acknowledge the “Department of Bangladesh Haor and Wetlands Development” and the “Water Resources Planning Organization (WARPO)” for providing us with data and maps from the National Water Resources Data (NWRD) base. We are thankful to them for helping us to formulate the Report including this Annexure.

We are thankful to Mr. Md. Majibur Rahman, Director General, Department of Bangladesh Haor and Wetlands Development and Mrs. Afroza Moazzam, former Director General of the Department of Bangladesh Haor and Wetlands Development for their active support and co-operation. We appreciate the co-operation of Mr. Md. Nazmul Ahsan, Project Director, Department of Bangladesh Haor and Wetlands Development and Mr. Md. Nurul Amin, Director (Admin and Finance), Department of Bangladesh Haor and Wetlands Development. We thank the local people, particularly of the Haor Region who in various ways helped the

study team for better understanding of the conditions and challenges of the study area as well as acquiring data on flora and fauna.

## Final Report

The Final Report on “Classification of Wetlands of Bangladesh” submitted in December, 2016 contains the following volumes:

1. Volume 1: Main Report
2. Volume 2: Annexure 1: Rivers of Bangladesh
3. Volume 3: Annexure 2: Haors of Bangladesh
4. Volume 4: Annexure 3: Maps of Wetlands of Bangladesh
5. Volume 5: **Annexure 4: Beels of Bangladesh**  
Annexure 5: Reversible Wetlands
  - 5A: List of Coastal Polders
  - 5B: List of Major FCD Projects of the BWDBAnnexure 6: Biodiversity of Wetlands of Bangladesh
  - 6A: Plants of Inland Wetlands
  - 6B: Plants of Sundarbans Mangrove Forest
  - 6C: Plants of Tanguar Haor
  - 6D: Birds of Tanguar Haor
  - 6E: Animals of Tanguar Haor
  - 6F: Freshwater Fishes of Bangladesh
6. Volume 6: Supporting Documents
  - Annexure 7: Feedback from the Workshops
  - Annexure 8: TOR of the Project
7. Volume 7: Annexure 9: Soil Information of Wetlands of Bangladesh
8. Volume 8: Annexure 10: Wetland Photo Gallery

## Preface

In Bangladesh, embankments and allied structures have been constructed both at inland and at coastal zone for flood control purposes. The area thus protected from flood by embankments or polders are not being considered as wetlands any more. However their remains great threat of breach or damage of the embankments due to natural hazards like cyclone or river erosion or due to other causes. If embankment breach occurs, the area be will again flooded regularly till repair or construction of new embankment is made. This indicates that the area protected by the embankments or polders are vulnerable to become wetland again. Hence a terminology of '**Reversible Wetlands**' have been introduced to explain this type of areas. The FCD projects of the BWDB and the Coastal Polders are examples of Reversible Wetlands.

This Annexure includes the names and locations of the major FCD and FCDI projects of BWDB and Coastal Polders. The Annexure is divided into two parts; 5A: List of Major FCD Projects of the BWDB and 5B: List of Coastal Polders.

We greatly acknowledge the "Department of Bangladesh Haor and Wetlands Development" for helping us to prepare the Final Report including this Annexure. We acknowledge the Water Resources Planning Organization (WARPO) for providing data and maps from the National Water Resources Data (NWRD) base. We acknowledge Bangladesh Water Development Board (BWDB) for providing data on coastal polders.

We are indebted to Mr. Md. Majibur Rahman, Director General, Department of Bangladesh Haor and Wetlands Development and Mrs. Afroza Moazzam, former Director General of the Department of Bangladesh Haor and Wetlands Development for their active support and co-operation. We appreciate the support of Mr. Md. Nazmul Ahsan, Project Director, Department of Bangladesh Haor and Wetlands Development and Mr. Md. Nurul Amin, Director (Admin and Finance), Department of Bangladesh Haor and Wetlands Development. We thank the local people, especially of the polder areas who in various ways helped the study team for better understanding of the conditions and challenges of the study area.

# Classification of Wetlands of Bangladesh

## Final Report

The Final Report on “Classification of Wetlands of Bangladesh” submitted in December, 2016 contains the following volumes:

1. Volume 1: Main Report
2. Volume 2: Annexure 1: Rivers of Bangladesh
3. Volume 3: Annexure 2: Haors of Bangladesh
4. Volume 4: Annexure 3: Maps of Wetlands of Bangladesh
5. Volume 5: Annexure 4: Beels of Bangladesh

### **Annexure 5: Reversible Wetlands**

#### **5A: List of Coastal Polders**

#### **5B: List of Major FCD Projects of the BWDB**

### Annexure 6: Biodiversity of Wetlands of Bangladesh

#### 6A: Plants of Inland Wetlands

#### 6B: Plants of Sundarbans Mangrove Forest

#### 6C: Plants of Tanguar Haor

#### 6D: Birds of Tanguar Haor

#### 6E: Animals of Tanguar Haor

#### 6F: Freshwater Fishes of Bangladesh

6. Volume 6: Supporting Documents
  - Annexure 7: Feedback from the Workshops
  - Annexure 8: TOR of the Project
7. Volume 7: Annexure 9: Soil Information of Wetlands of Bangladesh
8. Volume 8: Annexure 10: Wetland Photo Gallery

## Preface

Wetlands are important for their rich biodiversity. They are precious gift of nature from the considerations of their ecological functions, natural beauty, as well as of economic values. Considering the importance of biodiversity of wetlands, comprehensive lists of plants, birds, animals and fisheries of wetlands have been prepared. This annex is divided into six parts which are:

- **Annexure 6A: Plants of Inland Wetlands**
- **Annexure 6B: Plants of Sundarbans Mangrove Forest**
- **Annexure 6C: Plants of Tanguar Haor**
- **Annexure 6D: Birds of Tanguar Haor**
- **Annexure 6E: Animals of Tanguar Haor**
- **Annexure 6F: Freshwater Fisheries of Bangladesh**

It may be mentioned that both the Sundarbans and Tanguar Haor have been declared as Ramsar Sites.

We greatly acknowledge the ‘Department of Bangladesh Haor and Wetlands Development’ for helping us to prepare the Final Report. We acknowledge the International Union for Conservation of Nature (IUCN), Bangladesh for their help and support. We have extracted data from IUCN publications.

We are thankful to Mr. Md. Majibur Rahman, Director General, Department of Bangladesh Haor and Wetlands Development and Mrs. Afroza Moazzam, former Director General of the Department of Bangladesh Haor and Wetlands Development for their active support and cooperation. We appreciate the co-operation of Mr. Md. Nazmul Ahsan, Project Director, Department of Bangladesh Haor and Wetlands Development and Mr. Md. Nurul Amin, Director (Admin and Finance), Department of Bangladesh Haor and Wetlands Development.

# Classification of Wetlands of Bangladesh

## Final Report

The Final Report on “Classification of Wetlands of Bangladesh” submitted in December, 2016 contains the following volumes:

1. Volume 1: Main Report
2. Volume 2: Annexure 1: Rivers of Bangladesh
3. Volume 3: Annexure 2: Haors of Bangladesh
4. Volume 4: Annexure 3: Maps of Wetlands of Bangladesh
5. Volume 5: Annexure 4: Beels of Bangladesh  
Annexure 5: Reversible Wetlands
  - 5A: List of Coastal Polders
  - 5B: List of Major FCD Projects of the BWDB**Annexure 6: Biodiversity of Wetlands of Bangladesh**
  - 6A: Plants of Inland Wetlands**
  - 6B: Plants of Sundarbans Mangrove Forest**
  - 6C: Plants of Tanguar Haor**
  - 6D: Birds of Tanguar Haor**
  - 6E: Animals of Tanguar Haor**
  - 6F: Freshwater Fishes of Bangladesh**
6. Volume 6: Supporting Documents
  - Annexure 7: Feedback from the Workshops
  - Annexure 8: TOR of the Project
7. Volume 7: Annexure 9: Soil Information of Wetlands of Bangladesh
8. Volume 8: Annexure 10: Wetland Photo Gallery
