SENSOR SOLUTIONS AND SYSTEMS

BALLUFF
sensors worldwide

As a recognized partner in all sectors of the automation industry, Balluff offers comprehensive expertise in sensor technology and networking. We supply advanced technology and state-of-the-art electronics to our customers, who benefit from excellent service, application-specific solutions and individual consultation. You too can benefit from the excellent quality of our products and services.

Balluff North America

Florence, Kentucky USA
Balluff's Florence, Kentucky United States headquarters is located just south of Cincinnati, Ohio. Our customers are in industries such as automotive, machine tool, robotics, injection molding, packaging, material handling, and more.

In addition to sales, marketing, and logistic functions, this facility manufactures Micropulse® magnetostrictive linear position sensors and warehouses over 60,000 products.

The Balluff Global Network

Balluff spans the globe with representation in over 50 countries.

Warranty

Balluff products are guaranteed to be free from defects in material and workmanship as follows:

Standard lifetime warranty for inductive sensors and magnetically operated sensors sold to the original user.
Standard 2-year warranty from the date of shipment for photoelectric, capacitive sensors, read-write ID systems, magnetostrictive transducers*, connectors and cables, electromechanical limit and rotary switches, and all products with electromechanical relays sold to the original user.
Balluff will repair or replace at our discretion, without charge, any unit which fails because of defective workmanship or material, during this guarantee period and which is returned to Balluff transportation prepaid. This guarantee will not apply if, in the judgement of Balluff, damage or failure has resulted from accident, alteration, misuse, abuse, or operation on an incorrect power supply. This guarantee expressly does not include any other costs such as the cost of removal of the defective part, installation, labor or consequential damages of any kind. Balluff assumes no responsibility for selection and installation of its products. The foregoing is in lieu of all other guarantees expressed, implied or statutory and Balluff neither assumes nor authorizes any person to assume for it any other obligation or liability in connection with said products.

⚠ WARNING

- Read, understand, and follow warnings and manual. Failure to do so could result in serious injury or death.
- NEVER USE AS A SENSING DEVICE FOR PERSONNEL PROTECTION
- Does NOT include self-checking redundancy circuitry required for use in personnel safety applications
- Does NOT meet OSHA and ANSI standards for point-of-operation devices

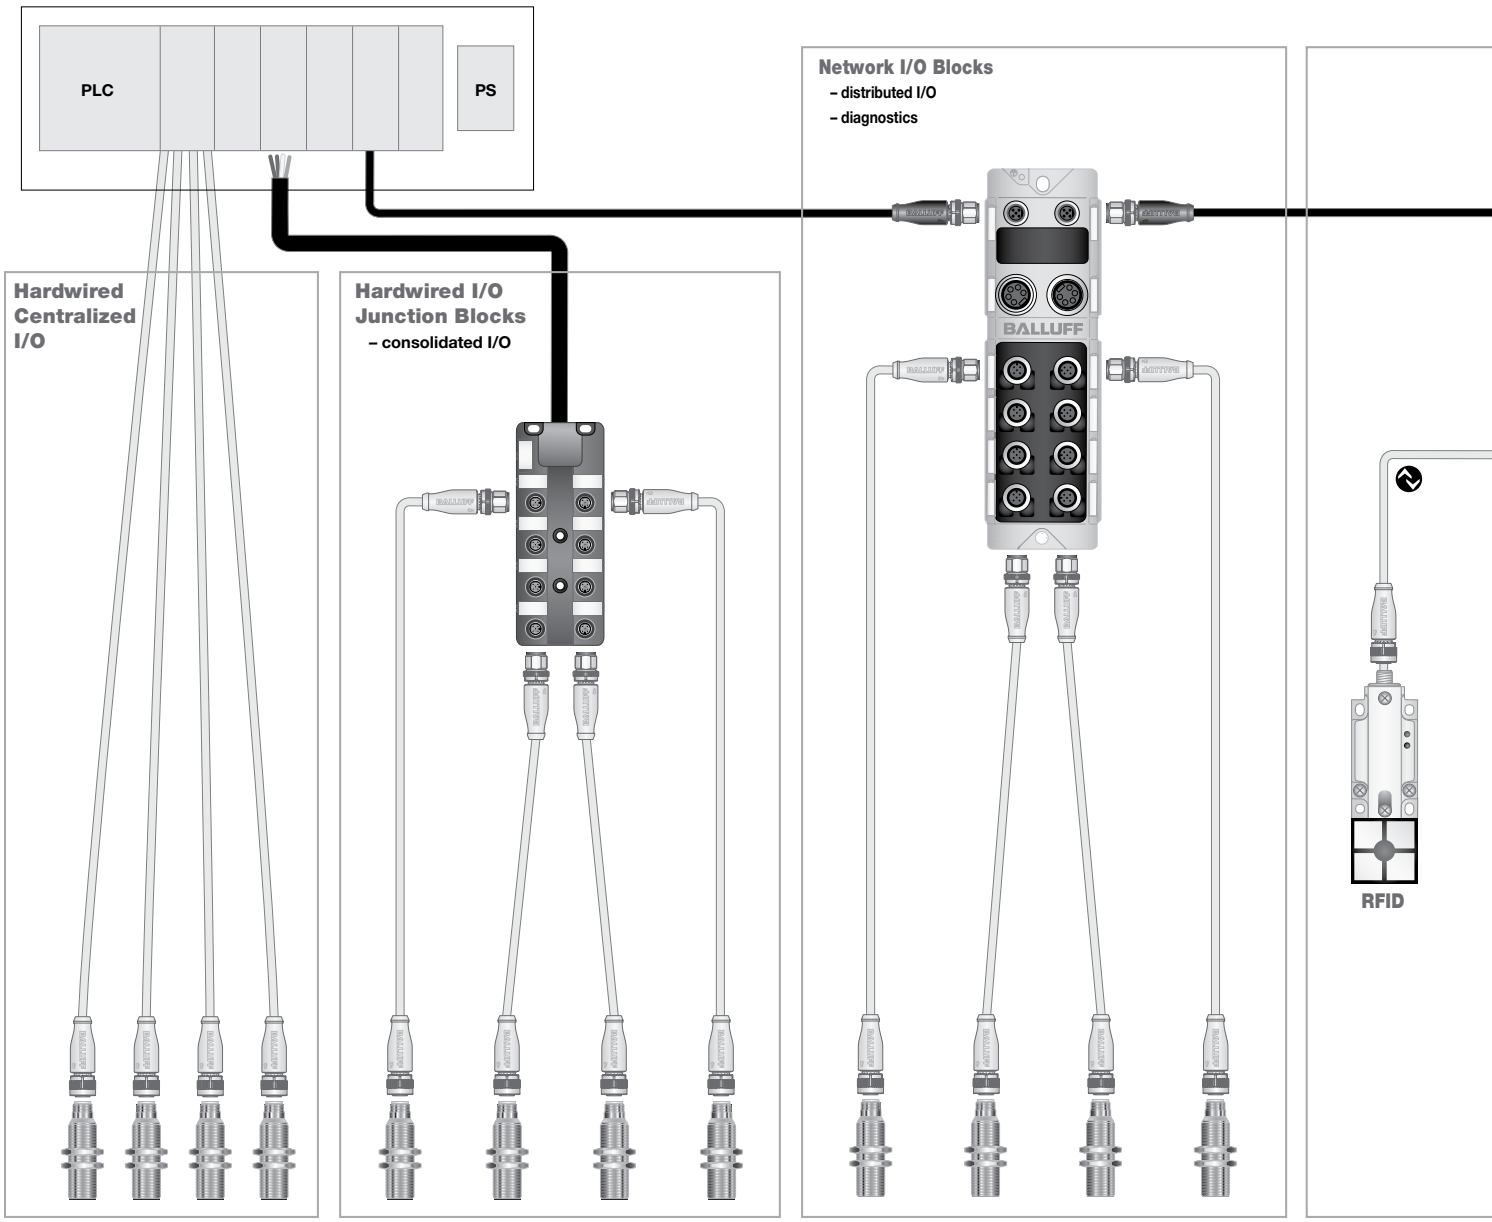
Balluff Networking & Connectivity

Advantages and disadvantages of I/O architectures



Style	Hardwired Centralized I/O	Hardwired I/O with Junction Blocks	Network I/O Blocks	
Advantages	■ Low component cost ■ Basic electrical knowledge needed ■ Low MRO costs	■ Low component cost ■ Basic electrical knowledge needed ■ Low MRO costs ■ Fewer multi-conductor cables back to controls cabinet ■ Shorter sensor cables	■ Diagnostics ■ Faster troubleshooting ■ One cable back to the controls cabinet ■ Lower maintenance cost ■ Shorter sensor cables ■ Higher up time	
Disadvantages	■ No diagnostics ■ Hard to troubleshoot ■ High maintenance cost ■ Large number of cables routed to controls cabinet ■ Long sensor cables ■ Long downtime	■ No diagnostics ■ Hard to troubleshoot ■ High maintenance cost ■ Long downtime	■ Higher component costs ■ Network knowledge needed	

	Distributed Modular I/O with IO-Link
	■ Diagnostics
	■ Faster troubleshooting
	■ One cable back to the controls cabinet
	■ Lower maintenance cost
	■ Shorter sensor cables
	■ Higher up time
	■ Scalable
	■ Parameterization
	■ Higher component costs
	■ Network knowledge needed

I/O Architecture Evolution

You can gain significant advantages when evolving to more technical I/O architectures. When moving from hardwired I/O to distributed I/O you gain faster setup/tear-down and shorter cable runs and everything becomes easier to troubleshoot. When transitioning from distributed I/O to networked I/O, you gain all of the benefits of distributed I/O plus easier setup/repair in the hardware side and easier troubleshooting from diagnostic data in the software side. Finally, if you move from networked I/O to decentralized I/O using IO-Link, you gain more diagnostics as well as the ability to change parameters of smart devices on the fly.

Architectural benefits

LESS

Hardwired I/O (<50 I/O points)

Hardwired I/O with Junction Blocks

Hardware Bill of Materials
- Single & double-ended corsets
- Power supplies
- Field attachables
- Receptacles
- Junction Blocks & MIBs

Advantages
- Low capital costs
- Basic electrical knowledge needed
- Fewer cable runs to the cabinet
- Shorter sensor cables

Networked I/O

Hardware Bill of Materials
- Single & double-ended corsets
- Power supplies
- Field attachables
- Network I/O blocks
- Network cables
- Auxiliary power cables

Advantages
- Diagnostics (see page i.8)
- Fast troubleshooting
- Smaller controls cabinets
- Lower maintenance costs
- Shorter sensor cables
- More up time

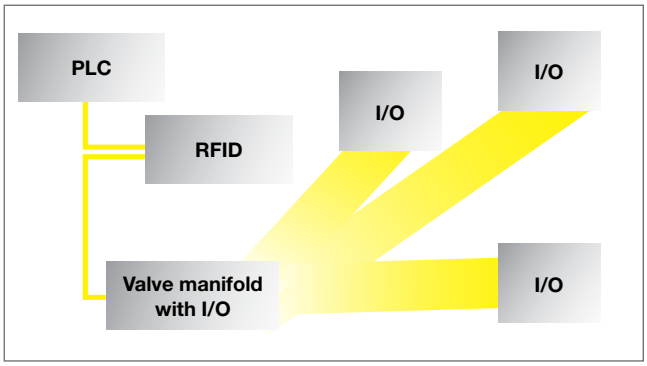
Distributed Modular I/O using IO-Link

Hardware Bill of Materials
- I/O hubs
- Smart devices (sensors, RFID, etc.)

Advantages
- Scalability
- Parameterization (see page i.8)
- Decentralized

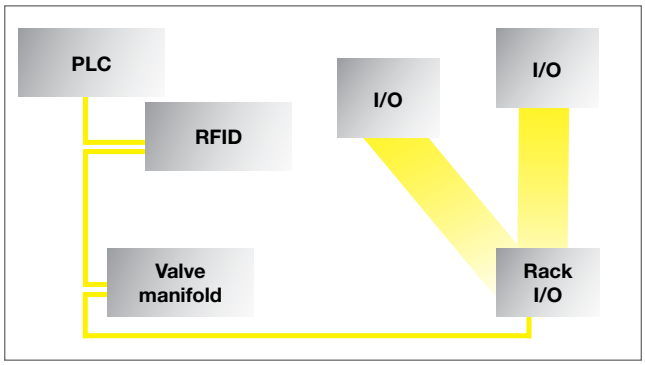
Selecting your Network I/O Architecture

Once you've made the decision to use a network for your I/O, there are multiple decisions that need to be made. Since there are many automation components that can communicate over the network, it is important to select the architecture that is best for your controls application. Possible components could be concentrations of I/O, an industrial RFID system or even a solenoid valve manifold. Presented below are the four most popular solutions to networked I/O architectures.



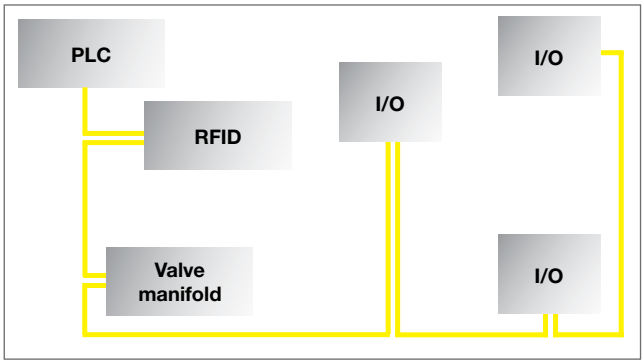
Centralized Valve Manifold with I/O

- — Minimum of 2 nodes required in this example
- ↓ Some extremely long I/O cable runs
- ↑ Shorter network cable runs
- ↓ Cable routing and volume problems



Centralized IP 67 Rack I/O

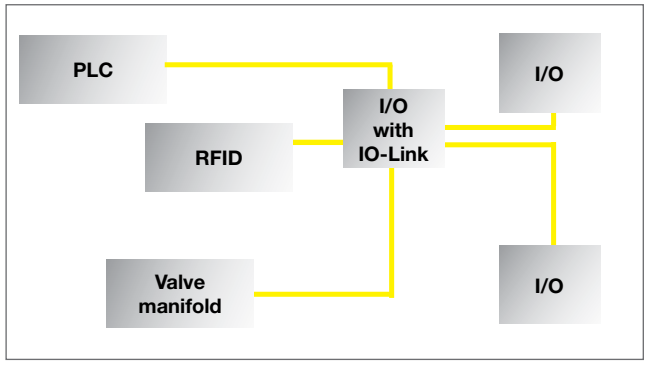
- — Minimum of 3 nodes required in this example
- ↓ Long network cable runs
- ↓ Long I/O cable runs
- ↓ Cable routing problems



Traditional Network I/O in a Workcell

- ↓ Minimum of 5 nodes required in this example
- ↓ Long network cable runs
- ↑ Short I/O cables
- ↑ Simplified design and setup

Visit section 1, Industrial Network I/O, for products and solutions.



Distributed Modular I/O using IO-Link

- ↑ Minimum of 1 node required in this example
- ↑ Short I/O cable runs
- ↑ Short network cable runs
- ↑ Simple 3 conductor sensor cables for IO-Link communications

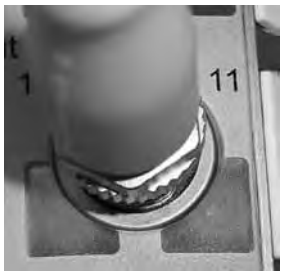
Visit section 2, Distributed Modular I/O, for Balluff IO-Link products and solutions.

Key: ↑ = postive ↓ = negative — = neutral

Machine Mount I/O Block Diagnostics

Diagnostic information from a device can give you continuous monitoring data and ensure reliable operation. Errors are centrally detected and with Balluff blocks, errors are quickly pinpointed to help increase system availability and lower maintenance costs.

Input Short Circuit Detection



- Port LEDs indicate short
- Diagnostic bits indicate port location to PLC
- Resets automatically once short is removed
- Only one port shorts, not the whole block or system

Output Overload Detection

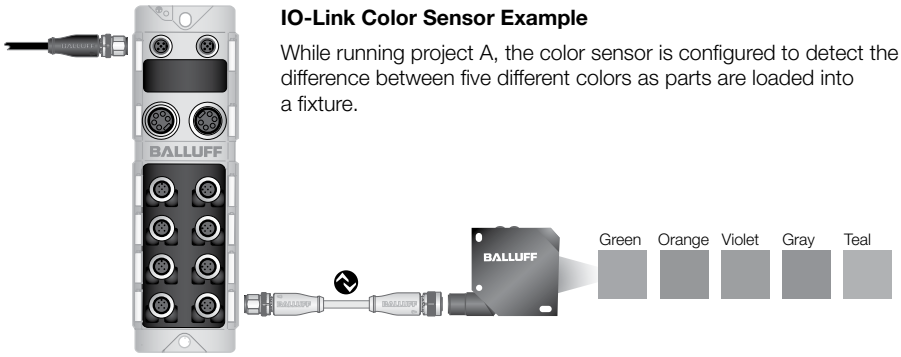
- Port LEDs indicate overload
- Diagnostic bits indicate port and point location to PLC
- Need to reset using the PLC and a reset bit per output
- Only the one port is affected, not the whole block or system
- Handshake bit gives feedback that the output is fired

Network and Power Status LEDs

- Input auxiliary power < 18 V
- Output auxiliary power < 18 V
- Mod LED indicated soft faults, configuration errors, or node address changes on the block
- Net LED indicates communication with the PLC and bus status

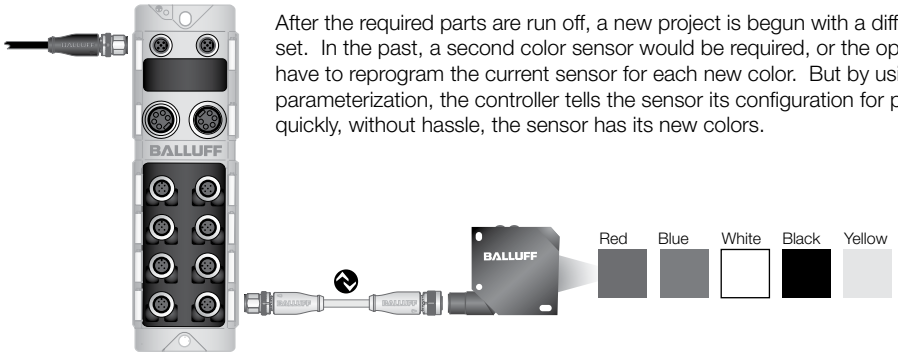
Device Parameterization via IO-Link

There are multiple advantages to device parameterization. The two major advantages are the ability to quickly swap out a failed device and the ability to reconfigure a device for a recipe or production change on the fly. The controller stores the necessary data for each setup and, when needed, it sends the parameters via the network to the IO-Link device. This can shorten setup times and increase efficiency.



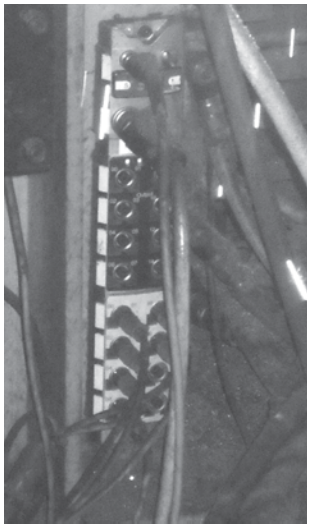
IO-Link Color Sensor Example

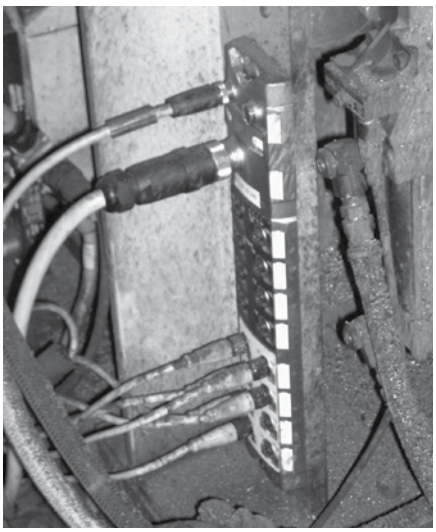
While running project A, the color sensor is configured to detect the difference between five different colors as parts are loaded into a fixture.



After the required parts are run off, a new project is begun with a different color set. In the past, a second color sensor would be required, or the operator would have to reprogram the current sensor for each new color. But by using IO-Link parameterization, the controller tells the sensor its configuration for project B and quickly, without hassle, the sensor has its new colors.

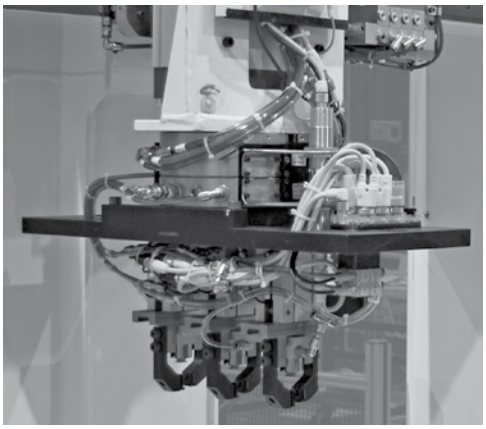
Rugged/Harsh Environments





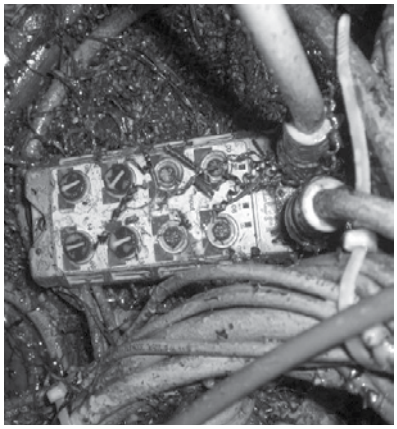
Many industrial applications require equipment to survive in rugged and harsh environments. The Balluff IP67 Machine Mount I/O Blocks meet this requirement in two ways. First, is the physical block itself. The Balluff blocks are fully potted within a metal shell, this gives the blocks a high degree of protection from shock, vibration, and physical damage. Second, is what you do not see. Balluff's network protocol stacks are among the best in the business. By having a reliable protocol stack, the potential for issues due to noise or other outside factor is greatly reduced. When choosing a network I/O block, it's best to know that the product will survive in the environment due to things you see and do not see.

End Effector Tool Changing



Utilizing two Balluff technologies, applications involving end effector tool changers are more reliable, have longer run cycles, and have greater flexibility. The first technology is IO-Link. Rather than a connect/disconnect network protocol (such as EtherNet/IP, DeviceNet, Profibus, etc.) which have slow boot times and are problematic when continually connecting and disconnecting, IO-Link provides a robust point to point serial connection which is stable, repeatable and faster in continual connect and disconnect applications. The second technology is Balluff's non-contact connector system. The non-contact connectors provide an air gap connection passing both power and signal, replacing the need for physical connections that can wear out over time. By combining the two technologies, end effector customers are provided a cleaner, faster, and more efficient methodology for their applications.

Maintaining IP67 Ratings



To reduce cost in applications, more and more I/O, controls, drives, etc. are being moved out of the cabinet and are being mounted in plant environments. These environments can range from cool and clean, to hot, humid, dusty, and even wet. Many customers verify that the products they purchase have an IP67 rating, but these products usually come with a disclaimer that the IP rating is dependent on the connection seals of the device's ports. Balluff's line of M8, M12, and 7/8" cordsets provide a connection method that verifies the port seals of the device meet an IP67 rating. With the use of hex coupling nuts and torque wrenches, Balluff's cordsets can help maintain an overall IP67 rating in most applications.

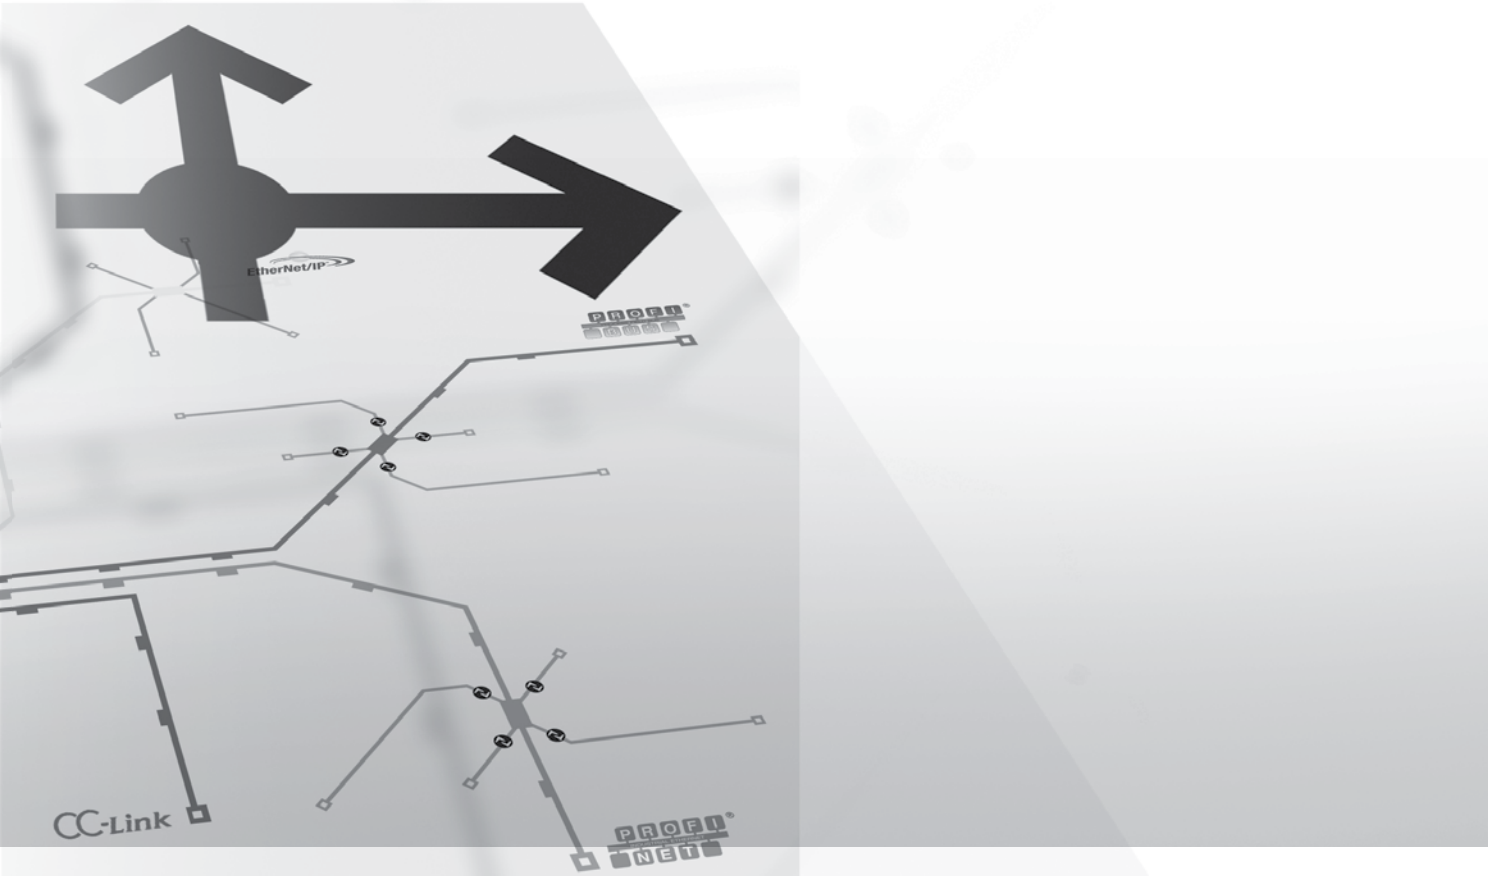
Balluff Network Products

Balluff has developed a comprehensive line of industrial network products that includes I/O blocks, switches, network cables and accessories. At the heart of the line are the I/O blocks. These blocks have a low initial cost per point and are designed to save money over the life of the system with maximum up time and easy maintenance.



Balluff Networking
Machine mount I/O blocks

Machine Mount I/O for Industrial Networks

As designers try to seamlessly integrate a broad range of compatible products from many manufacturers, they are turning to networks to ease design requirements, installation time and increase performance for their customers. Industrial networks are used to communicate input and output data from individual devices over simple media and hardware. Originally meant for communication inside the controls cabinet, industrial networks can now venture onto the machine and collect I/O data right where it's being created. This allows for easier machine setup and troubleshooting with sensors, actuators, and measurement devices.

Industry Standard Connectors
Every industrial network has its connection standards for IP67. Balluff conforms to these standards in our products and offers a full line of cables and accessories to help you build your network from the ground up.

IP67 Addressing
Whether the device has a push button display or rotary dials, Balluff's line of network I/O modules can withstand harsh environments and hold up against many fluids and debris. Easily program the node, station or IP address and setup the communication speed if required.

Multiple Protocols
EtherNet/IP, DeviceNet, Profibus, Profinet, CC-Link, IO-Link

Powerful and Safe Outputs
With output currents of up to 2 amps, Balluff outputs are capable of driving almost any load. Each output incorporates low-trip overload protection with LED indication and a latching feature for easy troubleshooting.

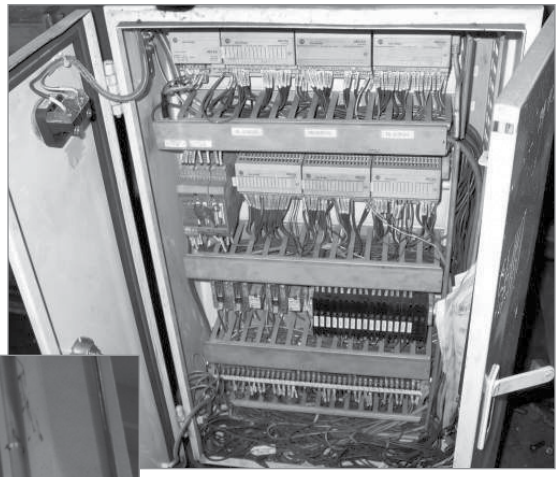
Clearly visible status LEDs
Low-quality LEDs are often difficult to identify under demanding production conditions. Balluff status LEDs are large, bright, highly visible, and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtime with ease.

Detailed Level of Diagnostics
Beyond the large I/O status LEDs, Balluff's blocks boast a high degree of diagnostic features from monitoring low voltage conditions on the auxiliary power connector to short circuit and overload status. All of these can be monitored at the controller.

Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

Do you currently wire all of your I/O back to a cabinet?

Every equipment designer goes through a phase of their design process where they need to decide how their I/O gets from the sensors and the valves to the controller. Some people use I/O cards on the PLC, or networks with IP20 solutions inside remote I/O cabinets. IP20 I/O in cabinets costs you money in initial equipment cost, construction time, installation and setup time. By using IP67 machine mount I/O, all of the sensors and actuators can be wired to blocks right on the machine and only the network needs to come back to the control cabinet. If you have multiple points, an IP67 Ethernet switch can be used to help collect I/O data and bring it back over one cable to the controller. The next time you are working on designing cost out of your machine, look at the labor and money you are putting into your remote I/O boxes and consider machine mount I/O instead.



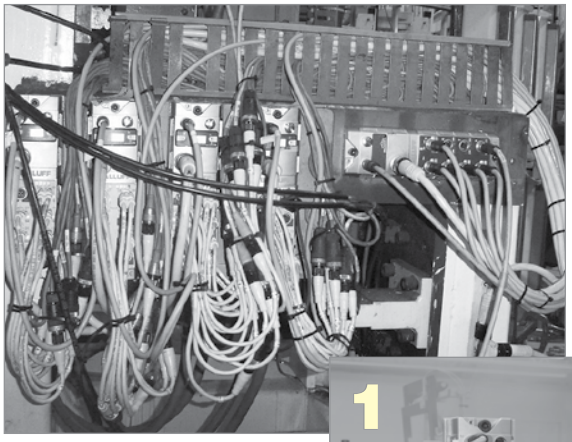
EtherNet/IP

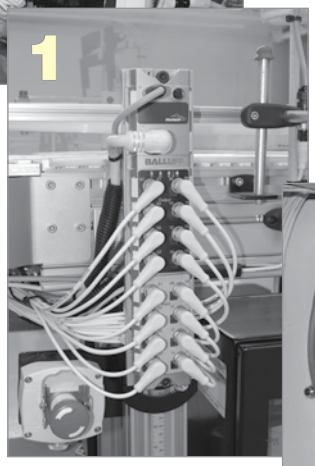
DeviceNet

PROFINET

PROFIBUS

CC-Link



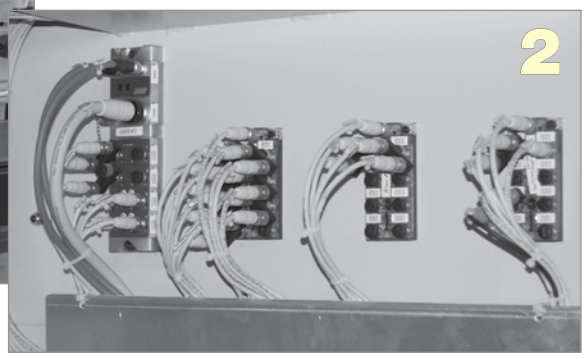


Do you currently have a lot of IP67 I/O in one place?

If your machine requires a large amount of I/O data this may be a daily issue for you. IP67 I/O makes bringing data back to your controller easier, but there might be so many points that it requires a large number of addresses on your network. Balluff offers two different solutions to this problem.

1. XXL Machine Mount I/O allows for double the amount of I/O points as a standard I/O module and has a smaller footprint. This allows for the same amount of data with one less network address, fewer network cables, and depending on the machine, can reduce the number of switches required. (See EtherNet/IP on page 1.11)

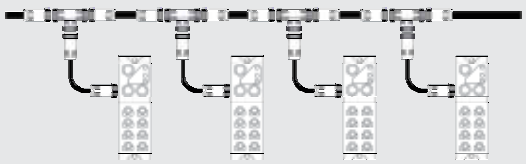
2. Distributed Modular I/O allows for up to four smart devices to be connected to one network address. With one address you can get up to 76 I/O points versus five network nodes in the traditional way. Also, IO-Link communicates point to point over standard sensor cordsets which costs less money and are less hassle than a network cable. (See IO-Link in section 2)



Balluff's Network Architecture Approach

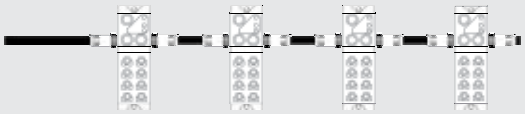
Your machine designs should not be hampered by inflexible network topology. Balluff's networking products include cables, tees, and hubs that allow you to mix and match elements of all topologies. Raw cable, single-ended cables, and field attachable connectors ensure installation flexibility.

Trunk and Drop
- Extra cable requirements lead to higher initial investment
- One device can be disconnected without disturbing the entire network
- Easiest to troubleshoot



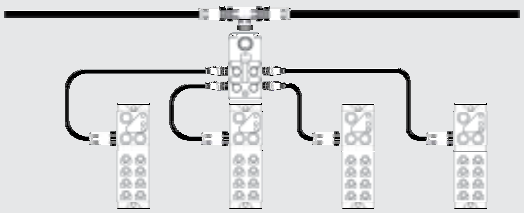
DeviceNet™ CC-Link

Daisy Chain
- Fewer cabling components lead to lower initial investment
- Disconnecting one device severs the network
- Most difficult to troubleshoot



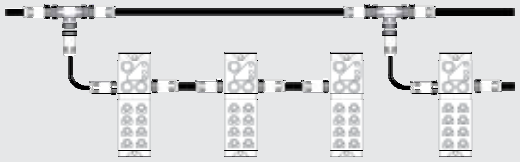
EtherNet/IP™ DeviceNet™ PROFIBUS PROFINET CC-Link

Star
- Less expensive - only one splitter box needed
- Ideal for large clusters of I/O
- Easiest to troubleshoot



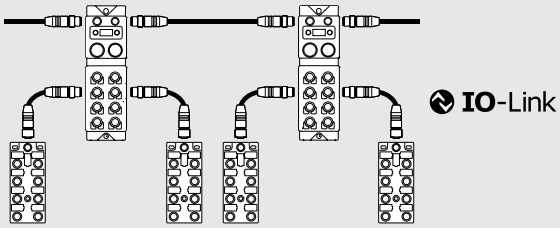
EtherNet/IP™ DeviceNet™ PROFINET IO-Link

Mixed Topology
- Relatively easy to troubleshoot by combining into logic groups
- Popular method - ideal functionality/cost balance



DeviceNet™ CC-Link PROFIBUS PROFINET

Extended Star
- Ideal for many large clusters of I/O
- Multiple I/O devices per address
- Least expensive - low-cost cables and hubs



IO-Link

EtherNet/IP™ DeviceNet™ CC-Link PROFIBUS PROFINET

Balluff Networking
Machine mount I/O product family

Input
- 16 or 32 PNP inputs
- Short circuit protected
- Short ciruit diagnostics
- Accepts polarized DC 2-wire inputs

Input/Output
- 8 PNP inputs and 8 sourcing outputs or 16 PNP inputs and16 sourcing outputs
- Short circuit protected
- Short circuit diagnostics
- Point level overload protection
- Rated output current 2.0 A per point
- Overload diagnostics
- User resettable overload latching

Output
- 8 or 16 sourcing outputs
- Point level overload protection
- Rated output current 2.0 A per point
- Overload diagnostics
- User resettable overload latching

Configurable
- Up to 16 PNP inputs or up to 16 sourcing outputs
- Short circuit and overload diagnostics
- Rated output current 2.0 A per point
- Overload diagnostics
- User resettable overload latching

IO-Link Master Blocks
- Up to 4 IO-Link devices can be connected
- Input and configurable versions
- Short circuit protected
- Rated output current 1.6 A per IO-Link device

Unmanaged Switch
- 9 port unmanaged switch
- Dual power source
- 10/100 base Tx ports
- Supports half/full duplex
- M12 D-coded female connectors
- Store and forward technology

Shock and vibration

EN 60068-2-6 Vibration (sinusoidal)
EN 60068-2-27 Shocks
EN 60068-2-29 Continuous shocks
EN 60068-2-64 Broadband random noise

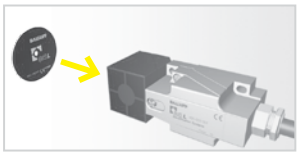
Industrial Identification

www.balluff.com/rfid

Suitable for any Industrial Environment
Balluff Industrial RFID guarantees a high degree of data reliability and quality, even in harsh environments. Balluff data carriers are resistant to shocks, vibrations, high electrical, inductive and electromagnetic interference and insensitive to aggressive materials.

Many Head / Data Carrier Options
A wide variety of components are available cast in different shapes such as disc, cylinder, cube or handy credit card format. Simply choose from a comprehensive selection of system products according to your application requirements.



100% Data Reliability
Reliable traceability of the production and quality data brings maximum visibility to your supply and production chain; thereby preventing quality fluctuations.

Variety of Applications Covered by Four Distinct Product Lines

BIS C – Versatile & ideal for a wide range of applications: tool ID, high temperatures, harsh environments

BIS L – Simple & economical for logistics and assembly lines

BIS M – Wide variety of options with fast data transfer and large read/write distance for flexible applications and ISO standardized

BIS S – For applications with large quantities of data to control assembly and production facilities

Easy Onsite Troubleshooting
Diagnostic LEDs and bits communicated to the controller allow for easy troubleshooting at the HMI or at the device. If further work with the processor is required, a service port is available on most units allowing a direct connection to the processor to allow for easy access.

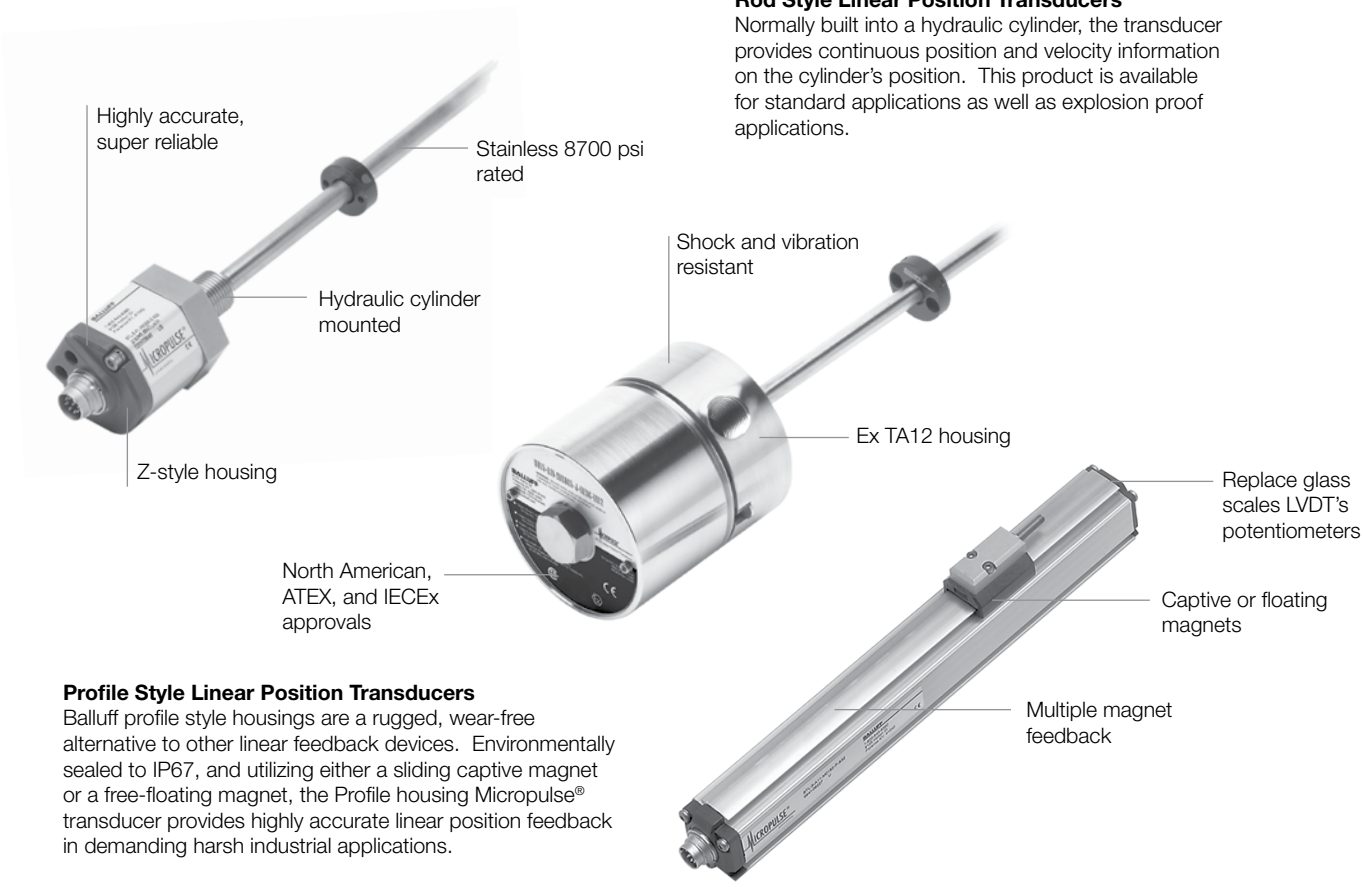
Linear Position Transducers



Rod Style Linear Position Transducers
Normally built into a hydraulic cylinder, the transducer provides continuous position and velocity information on the cylinder's position. This product is available for standard applications as well as explosion proof applications.

Profile Style Linear Position Transducers
Balluff profile style housings are a rugged, wear-free alternative to other linear feedback devices. Environmentally sealed to IP67, and utilizing either a sliding captive magnet or a free-floating magnet, the Profile housing Micropulse® transducer provides highly accurate linear position feedback in demanding harsh industrial applications.

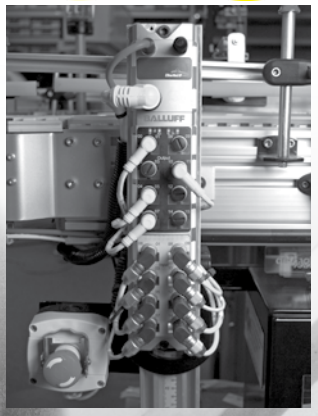
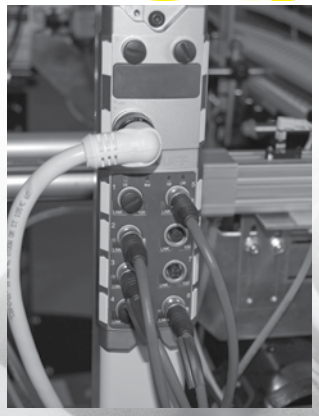
EtherNet/IP™





EtherNet/IP
Contents

In many areas, EtherNet/IP is replacing DeviceNet and has become a globally recognized standard for network technology. Based on Ethernet, EtherNet/IP is considerably faster than DeviceNet and facilitates the integration of drive technology. Furthermore, EtherNet/IP can be quickly installed and integrated in existing networks.

In addition to time savings and considerable cost savings comes the added benefit of ease of operation. Only Balluff products can program IP addresses of the Ethernet blocks with a display and the display can be locked to protect against accidental changes. The innovative address plug also guarantees simple exchange of modules.

Use the extensive line of EtherNet/IP products for your high-performance system, because only an optimized network guarantees maximum efficiency.

EtherNet/IP
Technology

EtherNet/IP™ has become a popular network for connecting field devices to centralized control solutions from Allen Bradley™ and other suppliers. EtherNet/IP allows designers to seamlessly integrate a broad range of compatible connectivity products from many manufacturers.

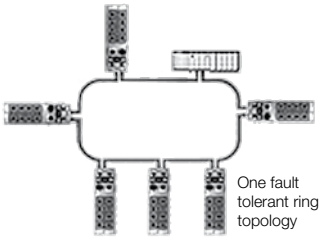
Balluff has developed a comprehensive line of EtherNet/IP products that include two versions of machine-mount I/O blocks, unmanaged switches, network cables and accessories. At the heart of the line are the I/O blocks. These blocks have a low initial cost per point and are designed to save money over the life of the system with maximum up time and easy maintenance.

I/O Block Network Features:

- Certified by ODVA to ensure reliable operation and complete interoperability
- Operates at 10 Mbit/s and 100 Mbit/s speeds for maximum throughput (auto-negotiate)
- Rugged M12 (D-coded) Ethernet connector
- Supports star topology for increased reliability, accurate troubleshooting, and fast commissioning

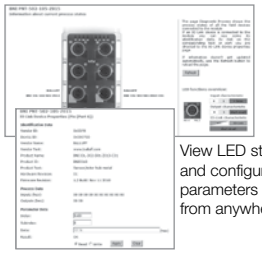
Webserver and DLR Capable

DeviceLevel Ring (DLR)



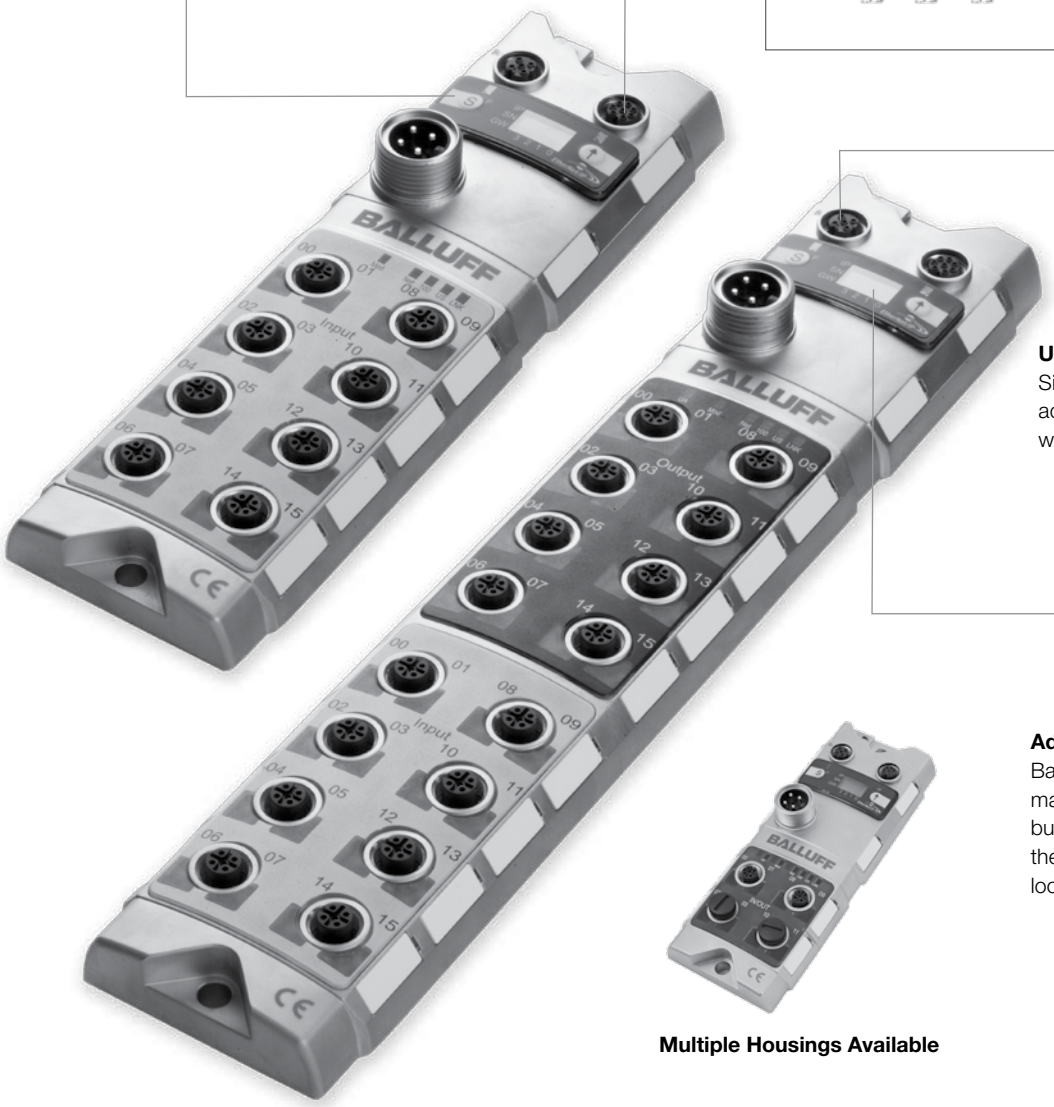
One fault tolerant ring topology

Webserver configuration and diagnostics



View LED status and configure parameters from anywhere

Easy, Flexible IP Addressing Methods
- BOOTP/DHCP
- IP67 quick change addressing plug (IPAP)
- Addressable display (100 series only)
- Webserver interface



User Defined LEDs (100 series only)
Similar to the IPAP, the display has the additional feature of red and green LEDs, which aid in troubleshooting.

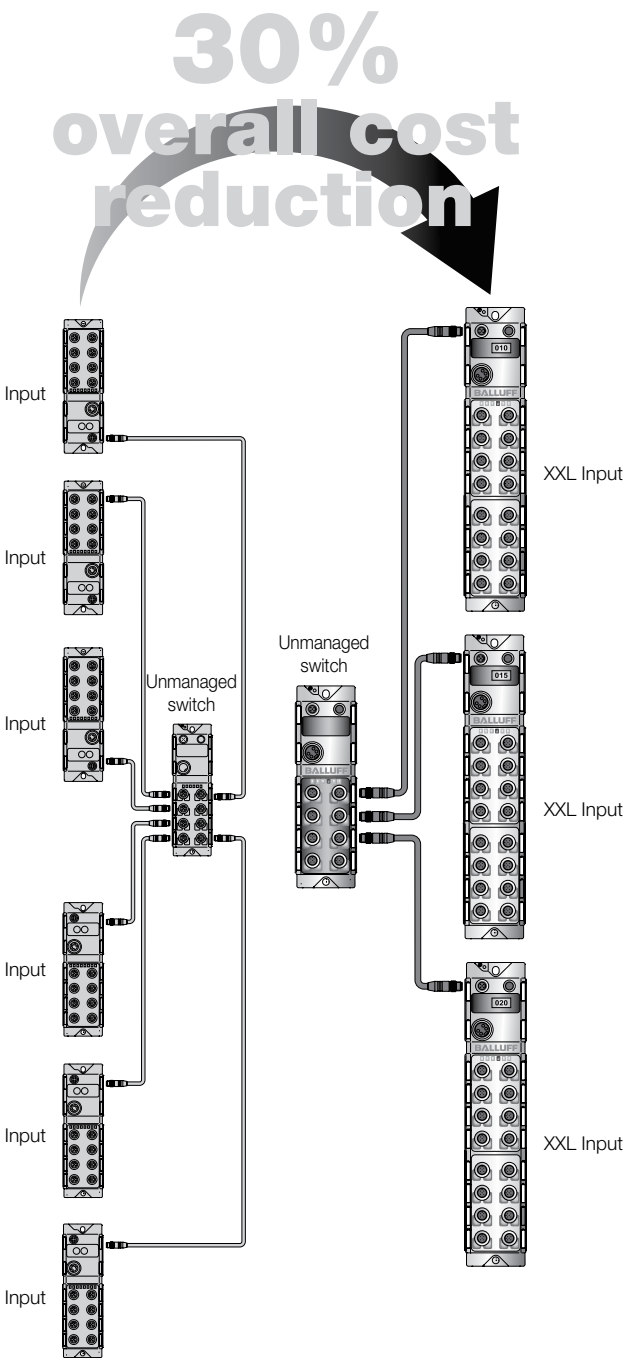
Addressable Display (100 series only)
Backlit display shows IP address, subnet mask, and gateway address. Push buttons allow the setting of any octet of the above addresses. The display can be locked out via the controller.

Multiple Housings Available

Reduce Point Costs with High-Density XXL I/O Blocks

Using high density I/O blocks reduces the cost per point by consolidating the costs of communication hardware into one unit. For example, by replacing two 16-point input blocks with one 32-point input block, the cost per point is reduced by 20% for the I/O blocks alone! And the savings go on…

- Reduce switch utilization by 50% (eliminating one port)
- Eliminate one network cable
- Eliminate one auxiliary power cable
- Reduce mounting space by 20%



6 DeviceNet Sins Not to Repeat with EtherNet/IP

Here are six topics to consider in your new EtherNet/IP installations:

1. **Topology** – Star, Linear (Daisy Chain), Ring, which one is the best for your application? Star allows for quick troubleshooting where one cordset or device can easily be identified as faulty, but has a high usage of Ethernet switch ports. Linear is a great topology for applications with long network runs, like conveyors, but one faulty cordset or device will kill all devices down the line. Ring topology brings the advantage of one fault tolerance. One cordset problem will not bring the network to a halt, but there are added expenses to this feature, as well as product availability for such a topology.

2. **Document, Document, and Document** – This should be #1, but in the sequence of events, this comes after choosing a topology. How can you troubleshoot, add new devices, or do preventive maintenance without knowing what you have in your application? You need to know your cordset lengths, device locations, switch locations, cordset flexing locations, and known problem areas. Once you have this, make sure it's available - make multiple copies, keep one at the machine, save it on your server, and be able to access it from your HMI.

3. **Cable Routing** – Remember these are network cordsets, they carry a lot of data at a high speed. Stay away from high noise locations. Use the right cable jacket for the environment. Do not use standard cordsets in flexing applications. Use the correct cordsets at the beginning because it's always a pain to go back and fix it later.

4. **Diagnostics** – Many DeviceNet users ignored diagnostic data in their PLCs from either the communication cards and/or the individual devices in the field. Use what EtherNet/IP diagnostics are available to you via the communications cards, PLC, field devices and managed switches. Making this data available on your HMIs is also a big plus. Don't forget that many devices, PLCs, and switches have their own built in web servers.

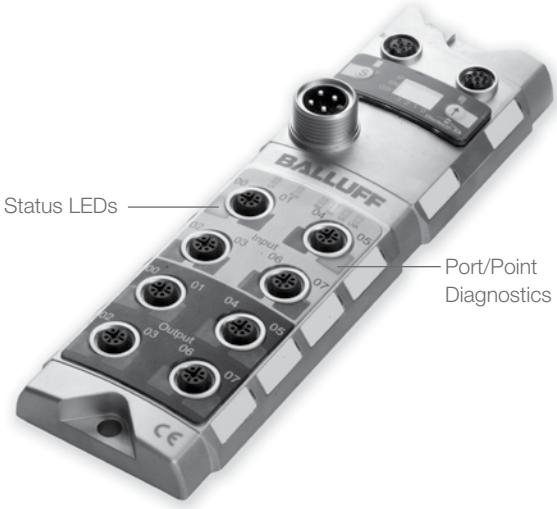
5. **Establish Procedures** – Define procedures early. How do I swap out a device? If the switch is dead, how do I replace it and reconfigure it? Can I use a longer cordset to replace a shorter bad one? All these questions will come up at some point, be proactive and have a procedure in place.

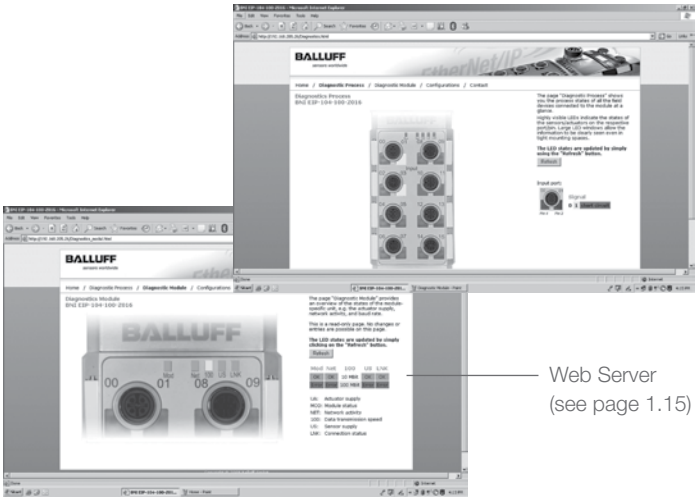
6. **Bandwidth and Packet Usage** – "Just add another device, it will be fine." Sometimes this statement starts a network down the wrong path making it unreliable. Know what a new device will do to your network traffic. Yes, EtherNet/IP is faster, yes it can pass more packets, but it does have its limits. Know where your funnel point is in your network, for most industrial Ethernet networks it is at the communication card in the PLC chassis. Know its limitations; be able to calculate its bandwidth and packet usage. Document your calculations and have a procedure to update these values when anything changes.

Block Diagnostics

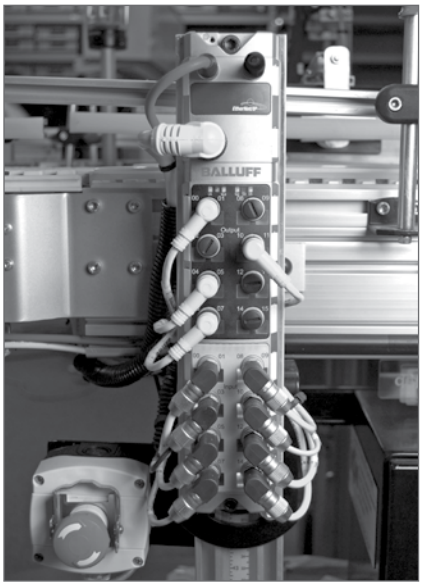
A device's diagnostic capabilities can be used as a key to quickly diagnosing and solving problems that have stopped a production process. Balluff's EtherNet/IP™ blocks come equipped to aid support staff in pinpointing problems in a variety of manners.

- Each I/O port boasts large LEDs to distinguish which port/point has a short circuit or overload condition
- Status LEDs are also viewable to determine the overall status of the block, communication speed, and auxiliary power status
- Each block reports short circuit and overload status back to the controller via the standard I/O mapping
- Built-in web pages allow users to view the status LEDs of the block and individual ports
- Customize LED reactions to different conditions to aid in finding the effected block using user-defined LEDs in the display or IPAP

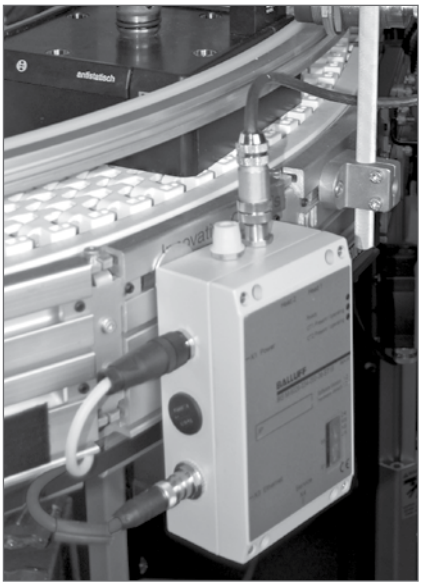




Applications



Machine Mount I/O
Your automation projects have sensors and actuators that require a large amount of I/O infrastructure. Balluff's XXL EtherNet/IP blocks allow you to have either 32 inputs or 16 inputs/16 outputs on one IP address. This reduces network costs and per sensor point costs.



Industrial RFID
With more than 25 years of experience in industrial RFID, Balluff can offer an Ethernet solution to meet your process automation needs. Ethernet protocols that Balluff supports are: EtherNet/IP™, Ethernet TCP/IP, Modbus TCP, and ProfiNet.

Addressing Methods

Below are the different methods for programming IP Address, SubNet Mask, and Gateway of the Balluff machine mount I/O blocks.

BOOTP/DHCP

Balluff's EtherNet/IP™ blocks can be set up using a standard DHCP server.

Push Button Display

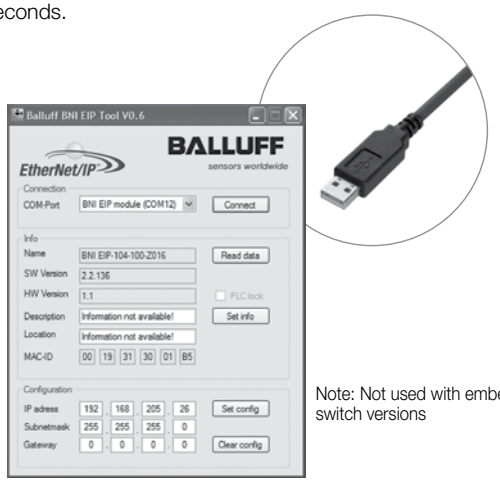
With the 100 series blocks, you can gain a significant advantage by programming all the octets of the block's addresses directly on the block iteself. This is the simplest means of programming because it does not require additional parts. User defined LEDs for trouble shooting and push button lockout are available from your controller.

Web Server

For those who prefer a web interface, Balluff EtherNet/IP™ blocks have a simple web server built in. This webpage lets you program the addresses of the block and view port or status information.

Block USB Programming

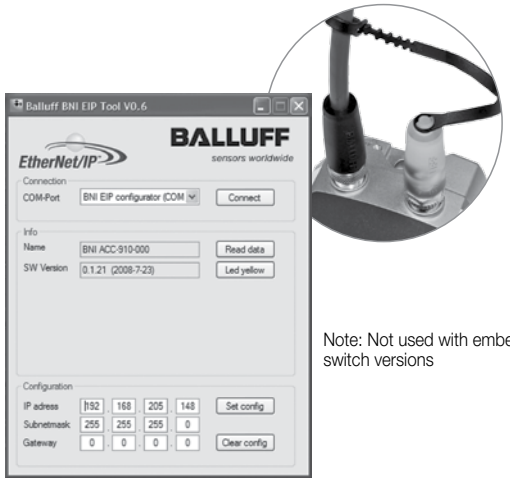
With the block programming cable and using the provided software, you can easily program the blocks' addresses in a matter of seconds.



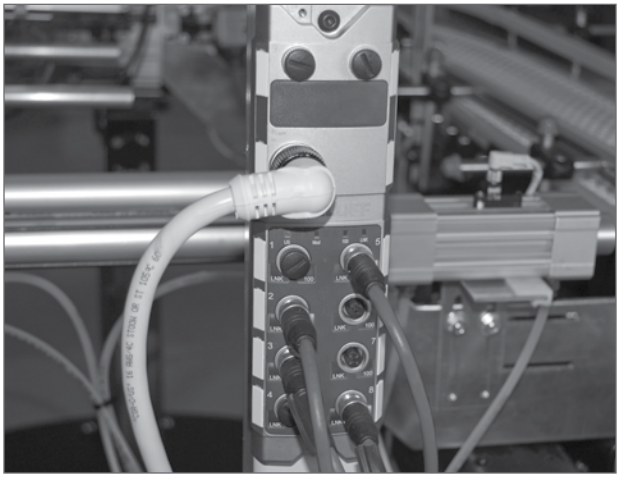
Note: Not used with embedded switch versions

IPAP Plug

Using the provided software, combined with the IPAP programming cable, the IPAP address plug can be easily programmed. By attaching the IPAP to a block, the address configuration is downloaded to the block on power-up.



Note: Not used with embedded switch versions



Ethernet Connectivity and Switches

Balluff's rugged IP67 unmanaged Ethernet switch can be used on any Ethernet project. Use this unmanaged switch to network your Modbus TCP RFID processors or connect your Sharpshooter® vision sensors together. This 9 port switch can even be used with your EtherNet/IP™ discrete I/O blocks.

Seamless Communication Right Down to the Sensors

In line with our reputation for durability, Balluff has designed and built a powerful line of machine-mount I/O blocks, along with supporting cables and accessories.

No other industrial network has seen a growth explosion like industrial Ethernet. The rapid growth is fueled by the seamless communication from plant level down to the sensors and actuators. With high-speed, deterministic throughput and the proven reliability of the physical layer, industrial Ethernet networks will continue to grow for years to come.

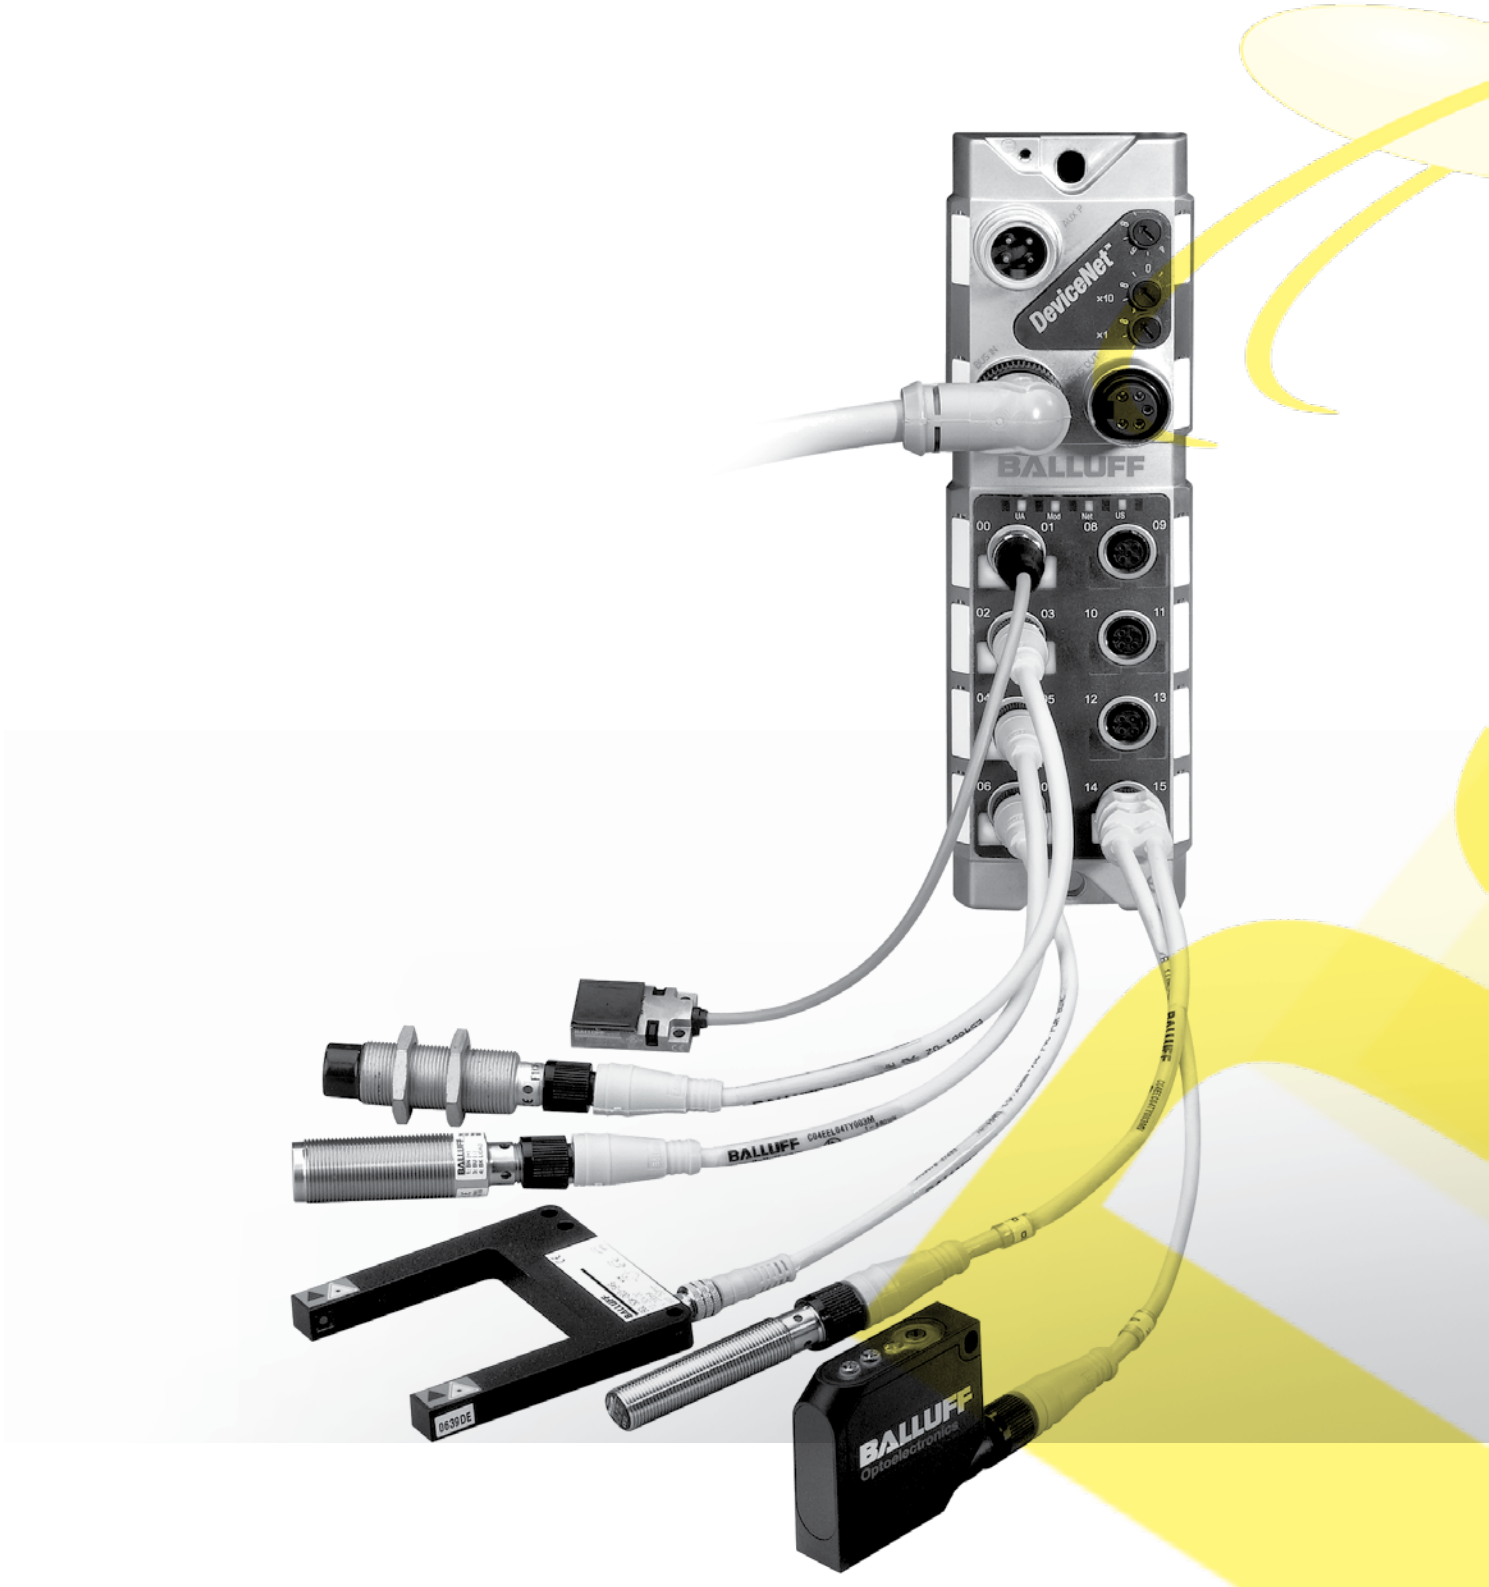
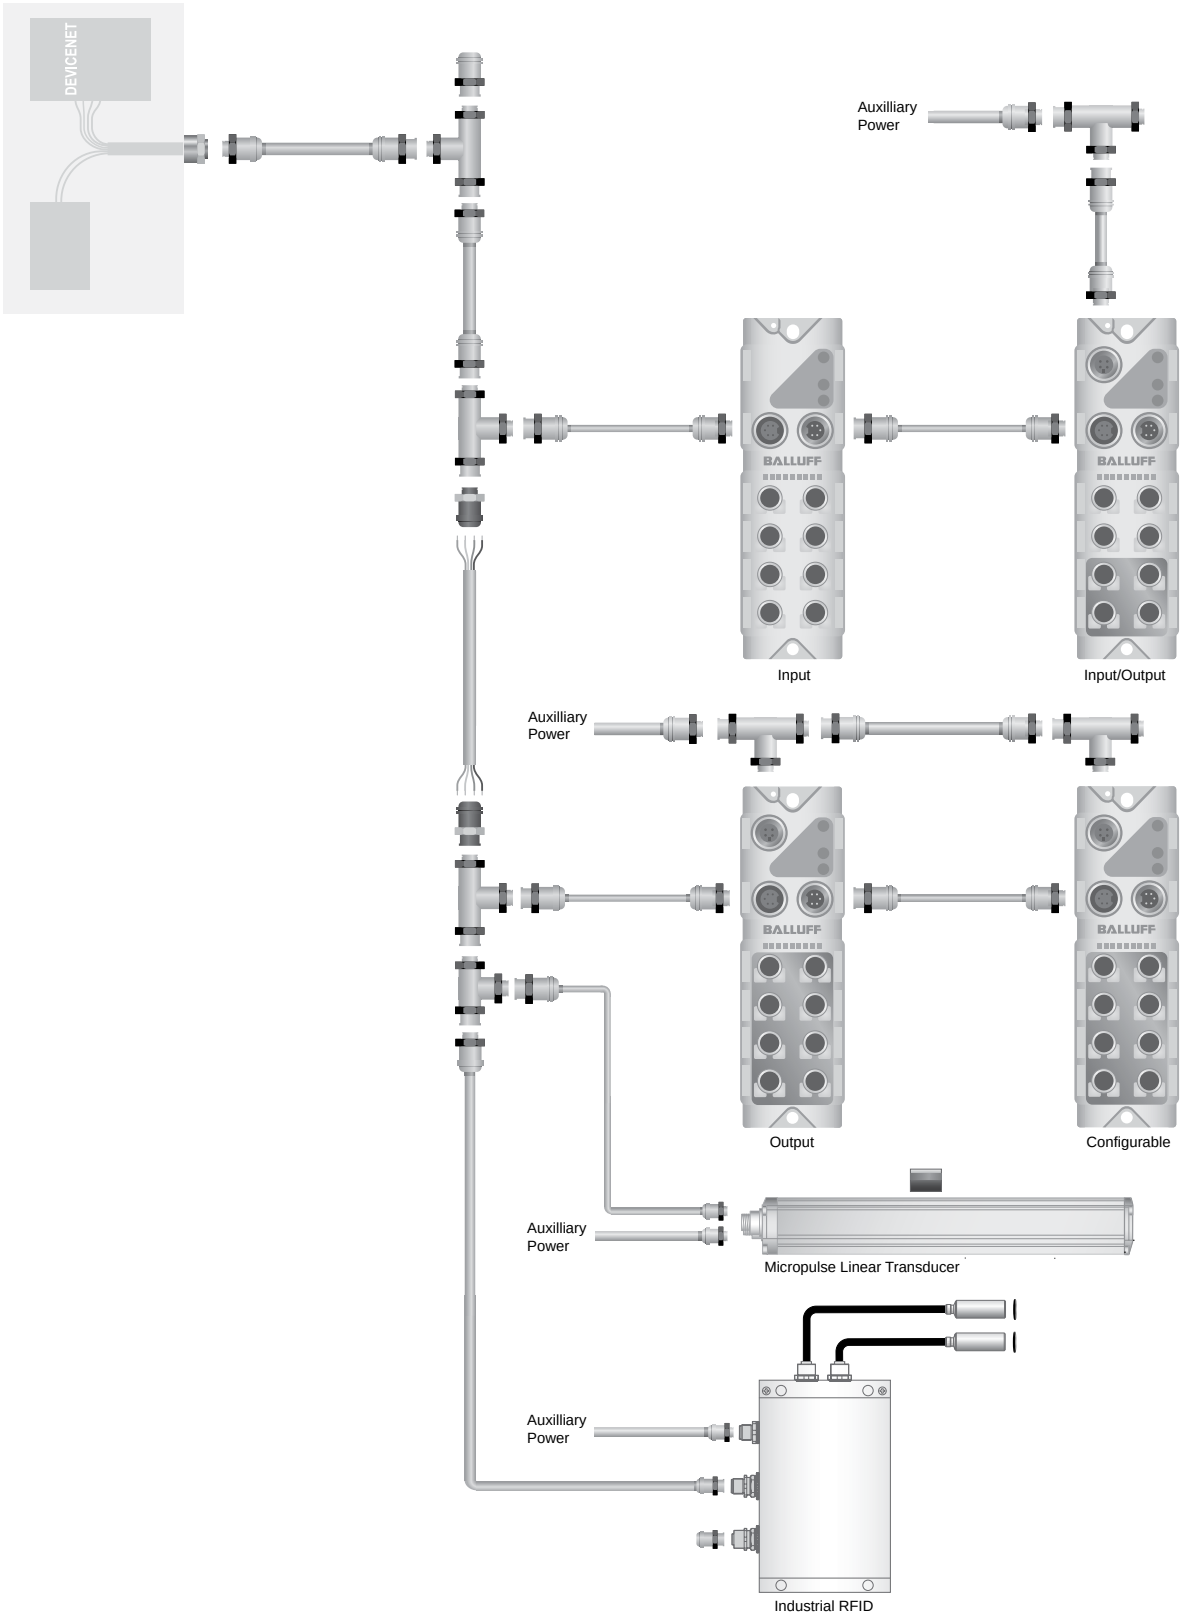
For a simple choice of outstanding network components, Balluff offers the entire spectrum of high-performance network technology. For applications in the USA, such as with Rockwell Automation and other controller manufacturers, you will find all modules for efficient DeviceNet installation at Balluff. You save time, resulting in lower costs.



DeviceNet
Contents

DeviceNet Product Topology

High-quality connectors and compatible accessories are required to create an efficient DeviceNet system. Balluff offers all the components you need for constructing and supporting a first-class DeviceNet network. From industrial RFID processors for plant floor data tracking to Micropulse® linear transducers for precision measurement applications, Balluff offers many solutions for use on your industrial DeviceNet network.



The heart of Balluff's Network Component System

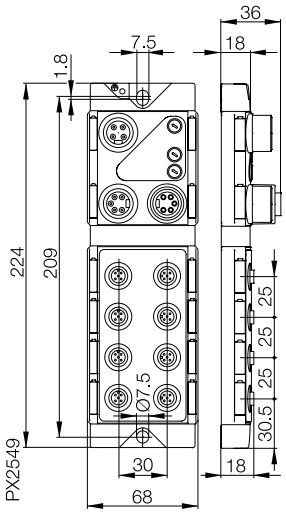
The old “home-run” wiring approach has proven too costly and inflexible for today's machine designers. Distributed I/O has become an essential part of OEM machine design and an accepted method for users to reduce their cost by eliminating long wire runs between field devices and the control system.

DeviceNet™ has become the preferred North American I/O network for connecting field devices to centralized control solutions from Allen Bradley™ and other control system suppliers. DeviceNet™ allows designers to integrate a broad range of compatible connectivity products from many manufacturers. But which components are best suited for your application?

As a leading supplier of sensors and other input devices for the manufacturing industry, Balluff's entry into the machine mountable I/O block market did not come as an afterthought. We have studied the needs of this market for many years. Armed with our experience and knowledge, Balluff has designed and built a line of machine-mount I/O blocks, along with supporting cables and accessories that include all the features our customers have asked for. Simply put, we've made your network component search easy.

Short Protected Ports
Don’t let one short on your network bring the entire DeviceNet network to its knees, these blocks only short at the port, leaving your network and more importantly, your process up and running.

IP67 Rotary Dials
Protected switches allow you to easily set the communication baud rate as well as the node address of the block.



High Density I/O
Each port of standard input and output blocks can be run with inputs and/or outputs on pin 2 and pin 4 allowing for multiple inputs/outputs per port.

DeviceNet Troubleshooting Products

DeviceNet NetMeter Diagnostic Tool

Part number	DN-MTR

This device makes it simple for maintenance personnel to troubleshoot and diagnose an installed DeviceNet network. Simply connect the device to the network and it quickly analyzes your network data traffic as well as the network power. It can help identify issues with bus traffic, power voltage, shielding issues, CAN Differential and Voltages. This device uses a simple easy to use interface with a large read display.

DeviceNet/CAN Analyzer

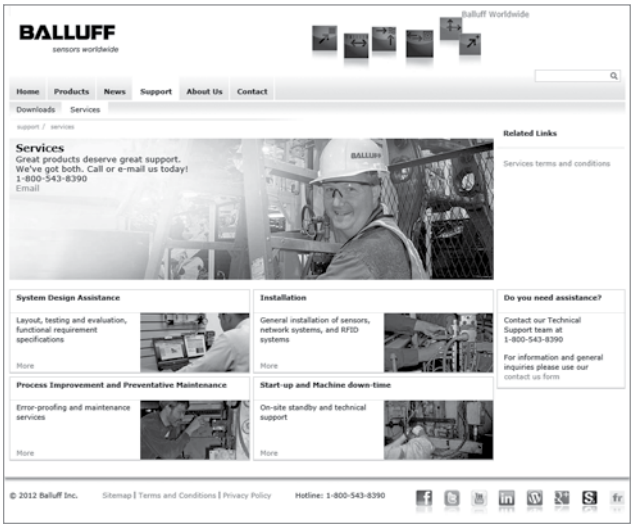
Part number	BNI ACC A03-01-01

The new DeviceNet Analyzer is a particularly powerful tool for analyzing, commissioning, monitoring and maintaining DeviceNet/CAN bus systems. Maintenance technicians, integrators, technical experts, or anyone who requires reliable information on the functional status of their DeviceNet system can use the DeviceNet analyzer to increase the overall efficiency of their facility. On-site testing and analysis simplify your working day, increase reliability and save you time.

DeviceNet Network Analysis On-site Service

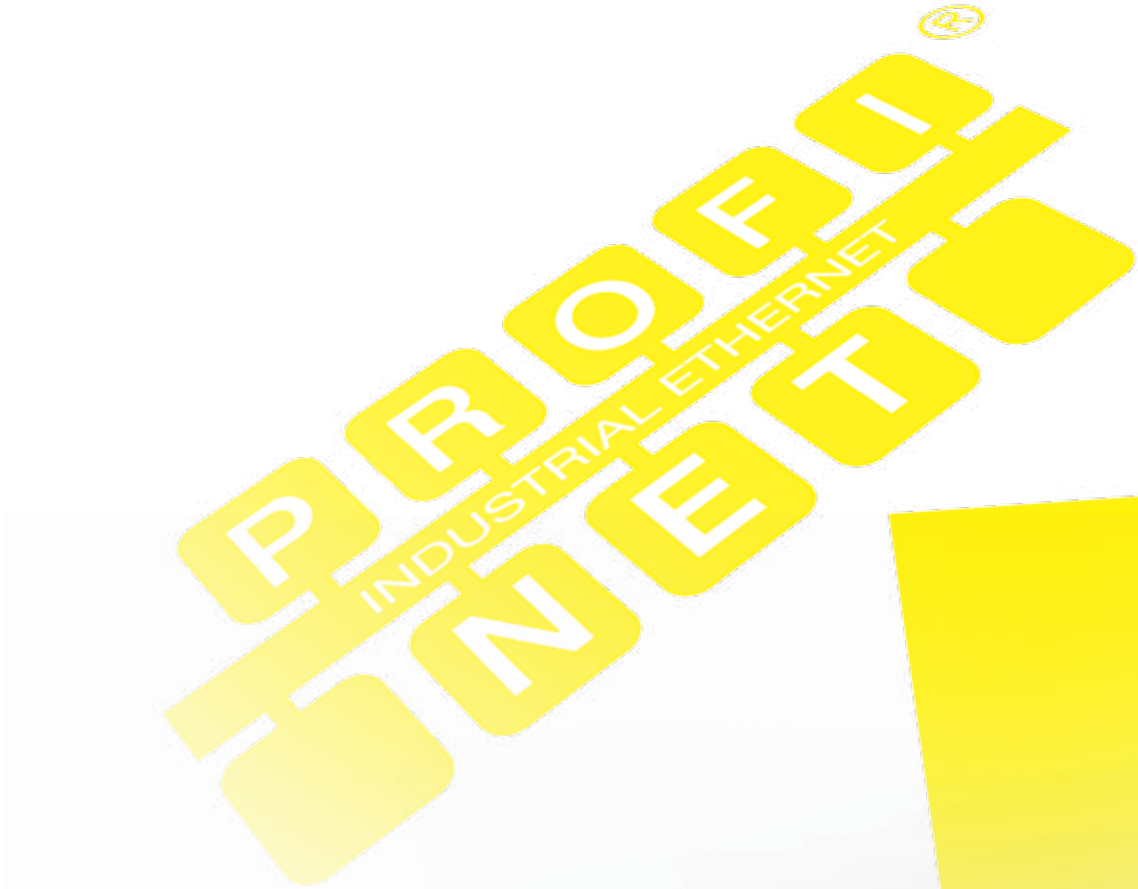
Have Balluff Technical Services come visit your facility and help you diagnose hiccups or issues on your DeviceNet network. We will review I/O network performance and validate the network health. This will be done by working with your maintenance crew to monitor data communications for a 24-hour period, analyze results, and provide a finalized report on overall network health with recommended improvements.

For more information, please visit www.balluff.us or call 1-800-543-8390.



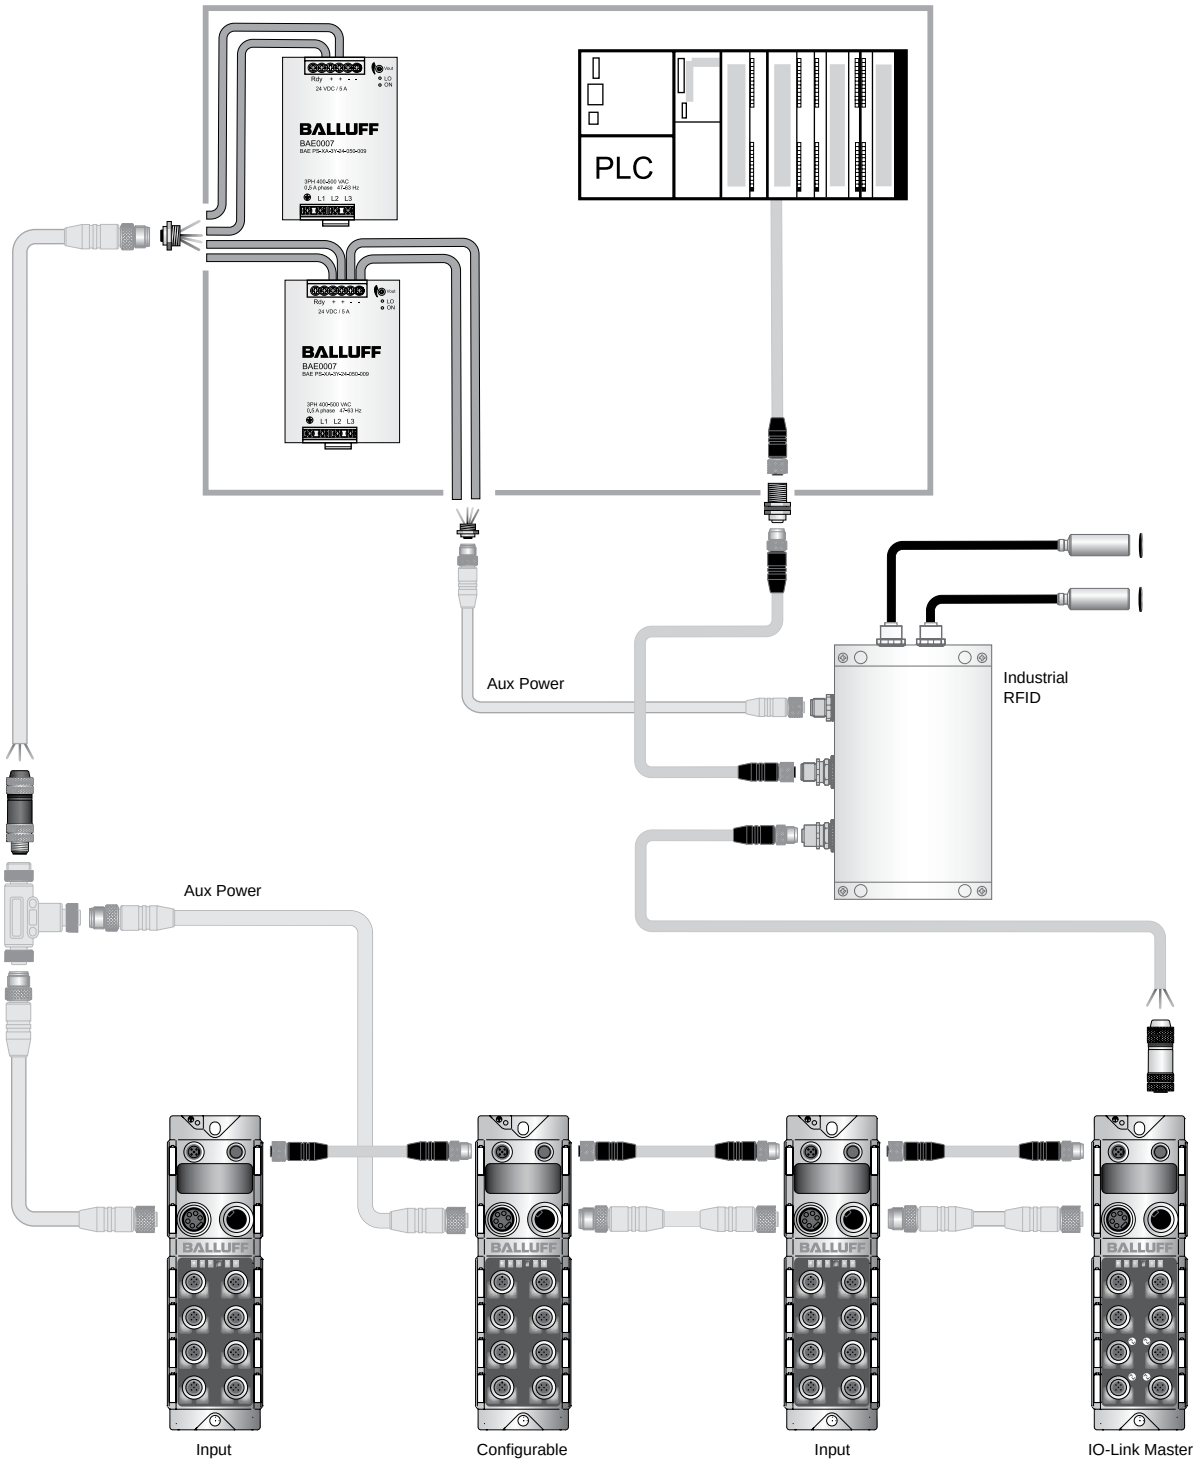
With Profinet, industrial automation has made a significant advancement. Profinet operates on an Ethernet basis and is considerably faster than Profibus. Other advantages: Profinet can be fully integrated from the control level to the drive, even in harsh environments. With Profinet, you also directly link drives and safety technology to the network environment.

Profinet and Profibus can also be combined with no additional work. Connection is also extremely simple with IO-Link. IO-Link not only ensures freedom of installation, but also guarantees simplified wiring, integrated diagnostics, and central configuration, with time savings and tangible cost benefits included.



PROFINET
Contents

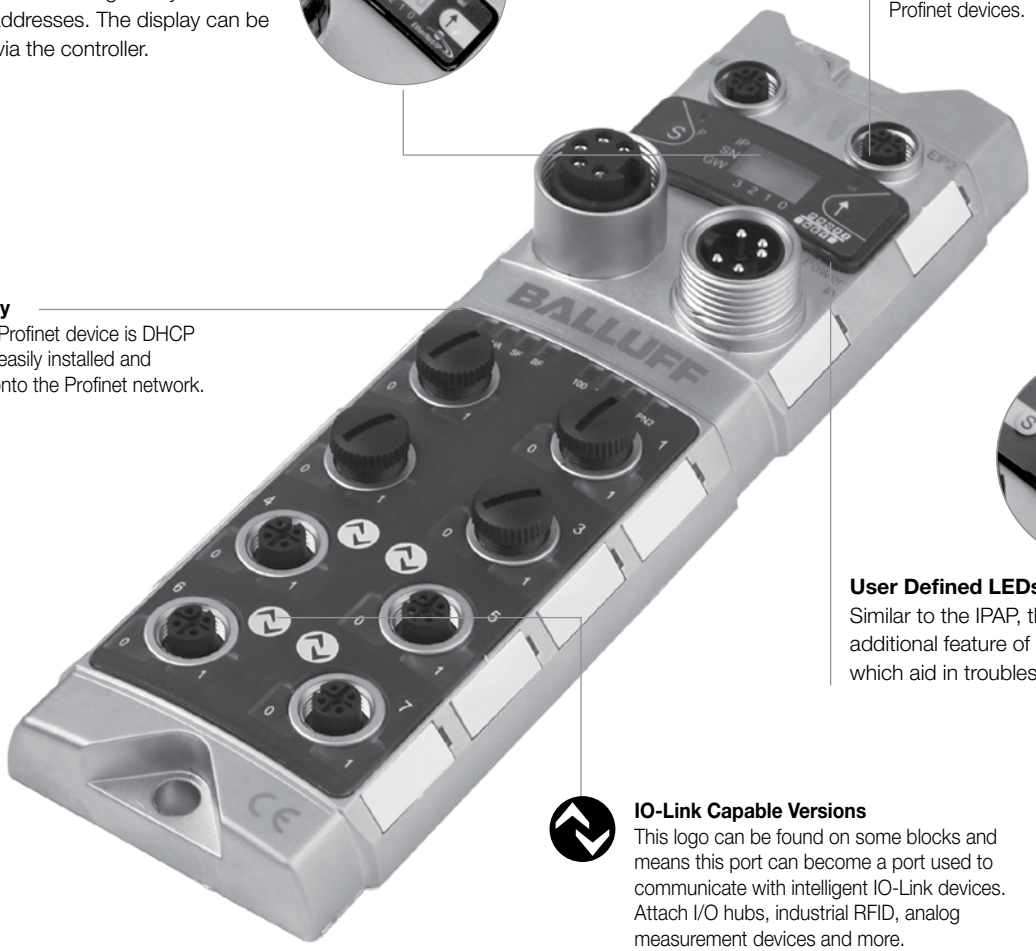
High-quality connectors and compatible accessories are required to create an efficient Profinet system. Balluff offers all the components you need for constructing and supporting a first-class Profinet network. From industrial RFID processors for plant floor data tracking to Profinet compliant network cables, Balluff offers many solutions for use on your industrial Profinet network.



There are many who rely on Profibus in their manufacturing processes and can now have that same dependability moving into the Ethernet realm with the Profinet protocol. Balluff offers a wide range of Profinet components for efficient and fast communication. IO-Link capable Profinet expansion blocks allow you to take full advantage of the many benefits of IO-Link such as its unique expandability and configurability of the IO-Link Devices.

Addressable Display (100 series only)
Backlit display shows IP address, subnet mask, and gateway address. Push buttons allow the setting of any octet of the above addresses. The display can be locked out via the controller.

Integrated Switch
These industrial M12 connections allow for easy IP67 connections between daisy chained network I/O modules and other Profinet devices.

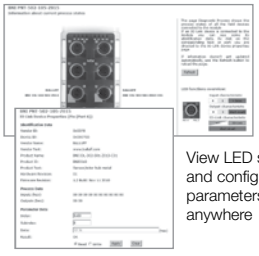


DHCP Ready
Every Balluff Profinet device is DHCP ready and is easily installed and established onto the Profinet network.

User Defined LEDs (100 series only)
Similar to the IPAP, the display has the additional feature of red and green LEDs, which aid in troubleshooting.

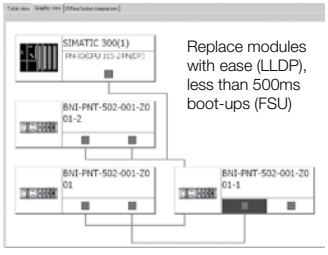
IO-Link Capable Versions
This logo can be found on some blocks and means this port can become a port used to communicate with intelligent IO-Link devices. Attach I/O hubs, industrial RFID, analog measurement devices and more.

Webserver configuration and diagnostics



View LED status and configure parameters from anywhere

Fast Start Up (FSU) and Link Layer discovery Protocol (LLDP)



Replace modules with ease (LLDP), less than 500ms boot-ups (FSU)

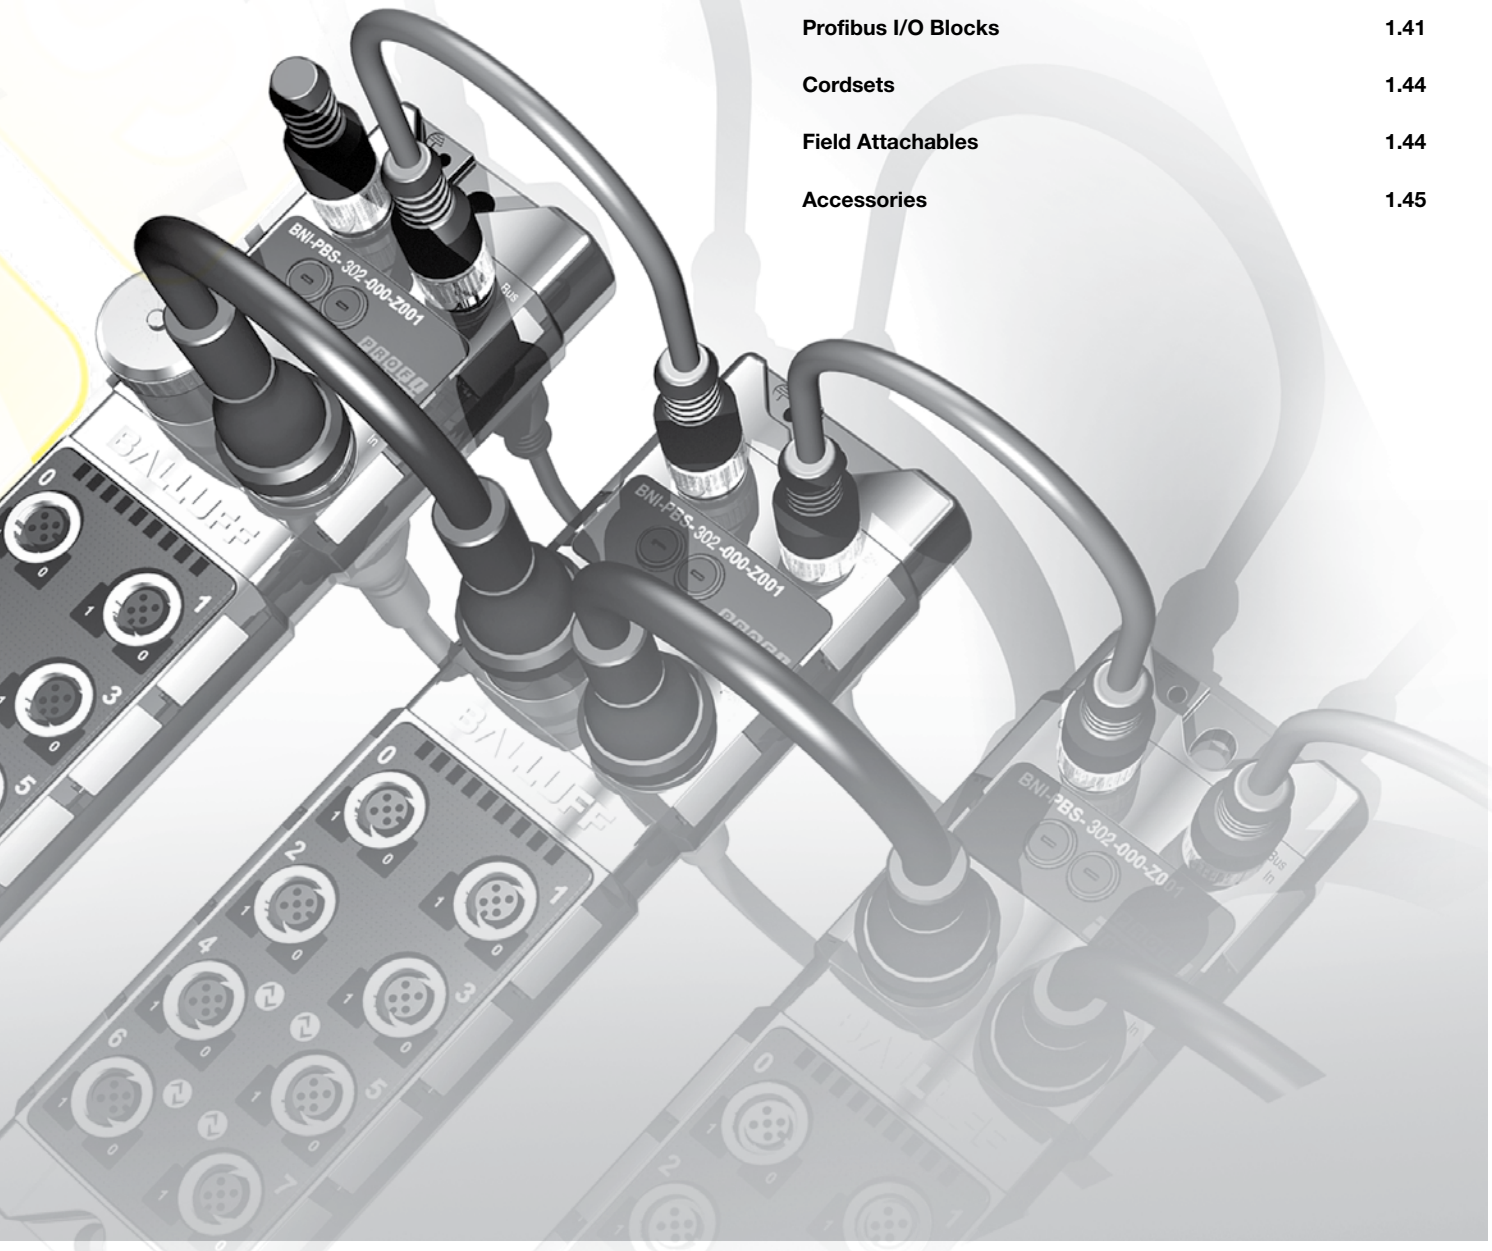
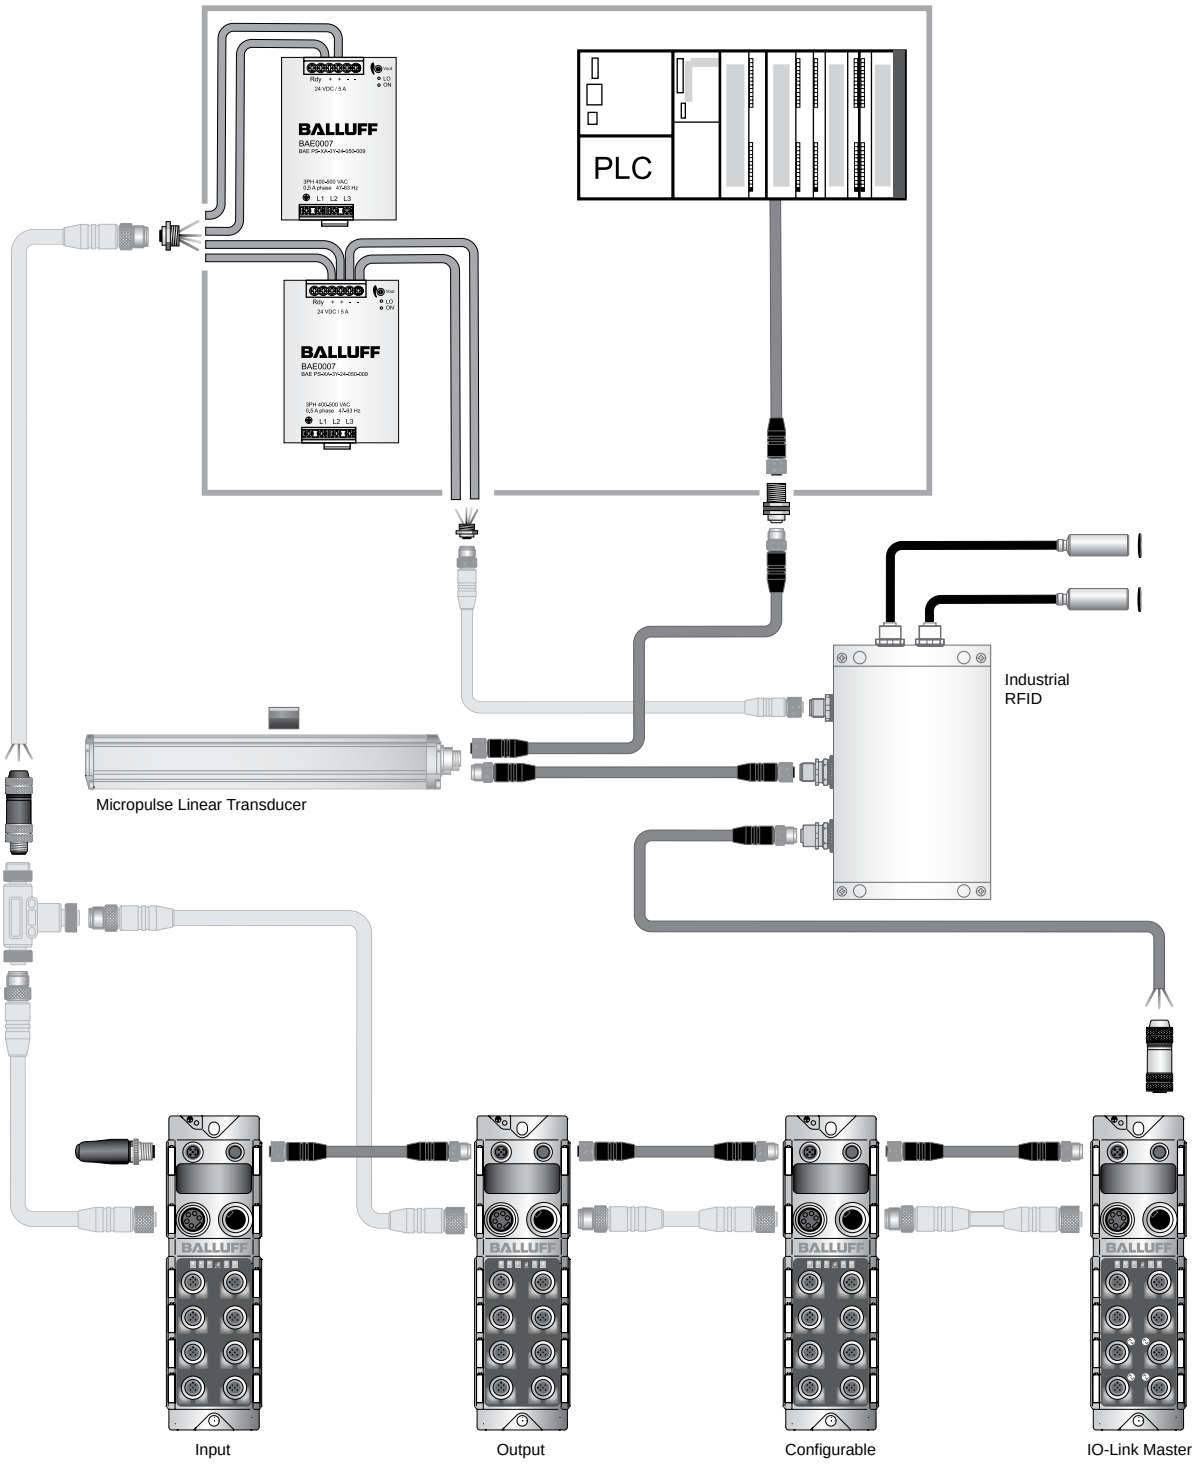
In use for 20 years, Profibus stands for well engineered fieldbus technology and reliably supports modern manufacturing. As a full-service provider, Balluff offers a wide range of components for optimum Profibus use. Regardless of controller manufacturer, Balluff has the perfect solution in store for you: for efficient field and process communication with simple wiring, fast integration through direct installation in your system and the possibility of fast modifications. Balluff Profibus solutions are IO-Link capable, allowing you to take advantage of solid IO-Link benefits. Wiring is made even simpler. Integrated diagnostics prevent system failure and through central configuration, systems are quickly returned to operation. You save time and benefit from real cost advantages. In addition, Profibus offers investment security, since standard IEC 61158/EN 50170 simplifies expansion of your system. Balluff contributes to increased efficiency and growing cost savings.



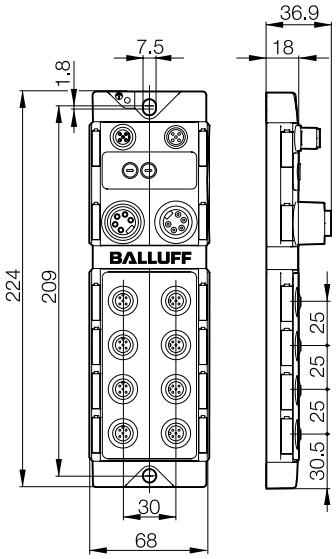
High-quality connectors and compatible accessories are required to create an efficient Profibus system. Balluff offers all the components you need for constructing and supporting a first-class Profibus network. From industrial RFID processors for plant floor data tracking to Micropulse® linear transducers for precision measurement applications, Balluff offers many solutions for use on your industrial Profibus network.



In use for 20 years, Profibus has reliably supported modern manufacturing in many applications. Balluff offers a wide range of Profibus components for efficient process communication with simple wiring, fast integration and unique expandability. IO-Link capable Profibus expansion blocks allow you to take full advantage of the many benefits of IO-Link.

IP67 Rotary Dials
Protected switches allow you to easily set the communication baud rate as well as the node address of the block.

High Density I/O
Each port of standard input and output blocks can be run with inputs and/or outputs on pin 2 and pin 4 allowing for multiple inputs/outputs per port.



IO-Link Capable Versions
This logo can be found on some blocks and means this port can become a port used to communicate with intelligent IO-Link devices. Attach I/O hubs, industrial RFID, analog measurement devices and more.

CC-Link

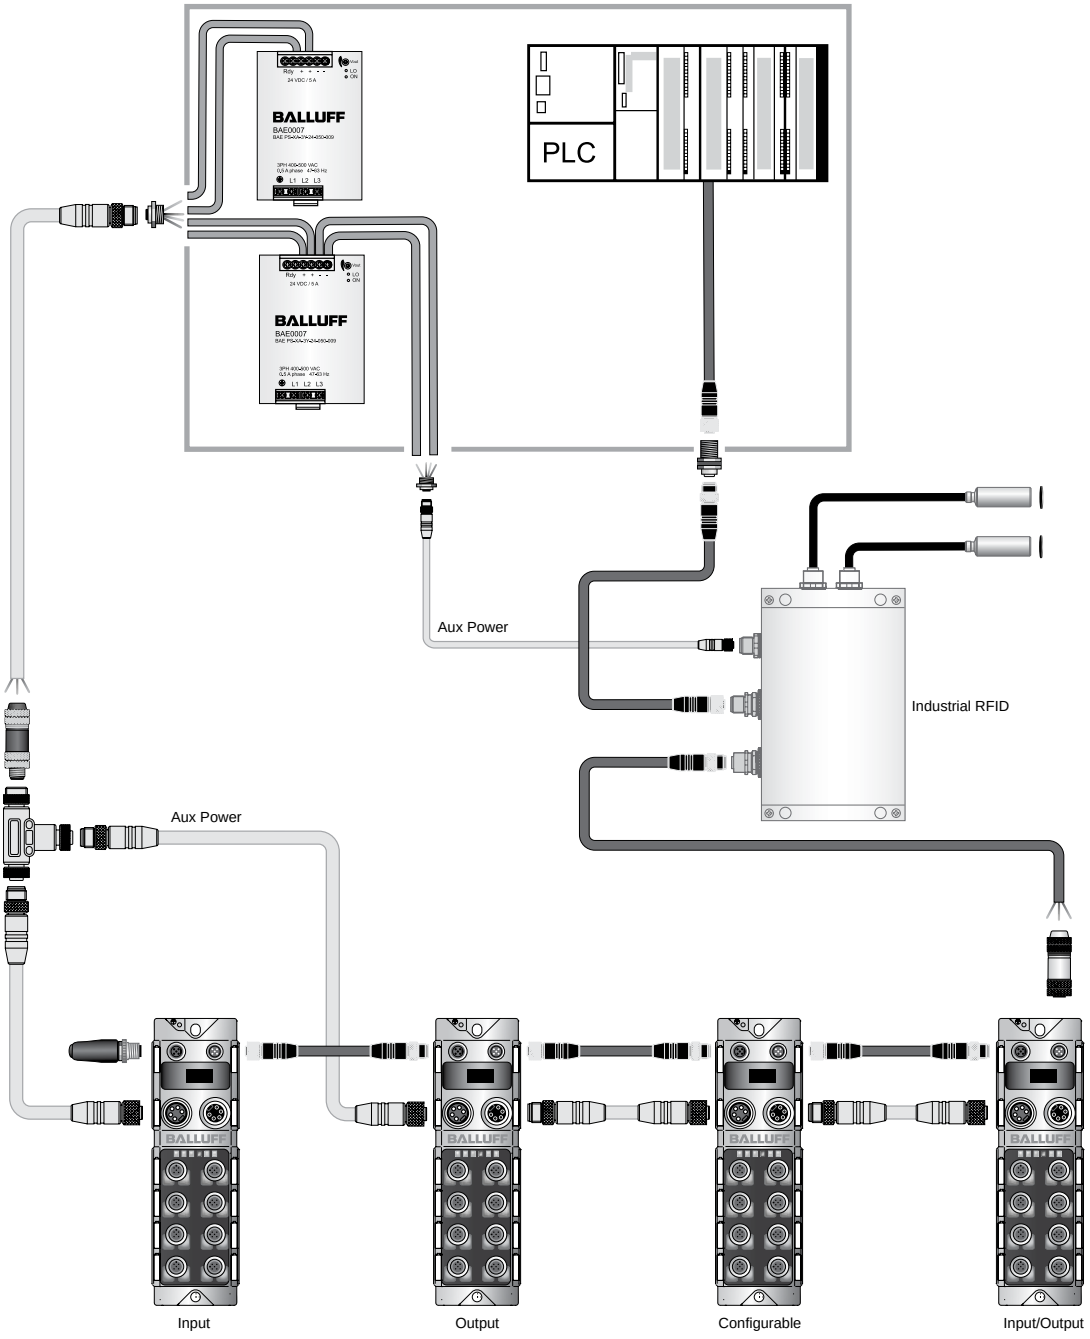
CC-Link is the most dominant and fastest growing fieldbus technology in Asia. The open network is supported by the global CC-Link partner association CLPA, which comprises more than 1,000 companies. CC-Link is a standardized fieldbus designed to integrate different automation components from a wide range of providers. CC-Link is an effective integral system that will fulfill 100% of your application requirements. Utilize the extensive, high-quality CC-Link portfolio from Balluff to implement your own powerful control topologies using products from a single source.

CC-Link
Topology

Balluff is your established partner for fieldbus expansion modules. CC-Link IO modules enable the consistent, cost-optimized implementation of requirements using decentralized installation technology and lead the way in harsh industrial applications.

CC-Link offers the following advantages:

- Constant data throughput, even when processing large data volumes
- Deterministic response for reliable real time control
- Controllers programmed over the network
- Powerful diagnostic system for clear identification of problem areas
- Network stations switched on and off during operation
- Network stations restored automatically
- Standby master function
- Optional configuration software



Get Rid of Remote I/O Cabinets Once and For All

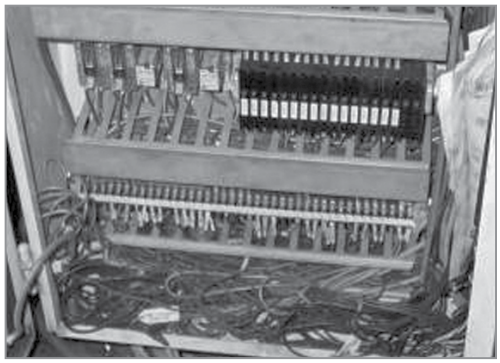
Every equipment designer goes through a phase of their design process where they need to decide how their I/O gets from their sensors and their valves to their controller. Some people use I/O cards on their PLC, or networks with IP20 solutions inside remote I/O cabinets.

Remote I/O cabinets are costing you money in three ways:

1. **Initial Equipment Costs**
   You have to purchase a remote NEMA Box, bulkhead pass through connectors or gaskets, the remote I/O network connection as well as the required input and output cards for the application.

2. **Installation Time**
   The box needs to be mechanically mounted in its designated space and installed with all of the wires and connectors run to it. An electrician then needs to come in and wire everything to the I/O ports. If you are using PNP or NPN sensors, there are three terminations per sensor that the electrician needs to connect.

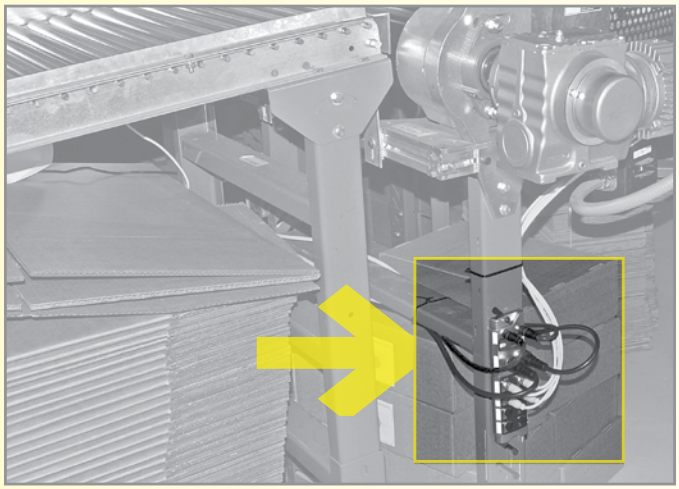
3. **Setup Time**
   If for some reason the machine needs to be torn down and shipped someplace else (which many machines do), many hours can be spent disconnecting the I/O only to be reassembled in the final destination.



Before

After

These costs in time and money can be reduced by looking at industrial network I/O mounted right on the machine. IP67 I/O gives quick industrial connection for the network communication and power cables. Most of the sensor and actuator cables can stay with the block because the I/O block is mounted right on the machine where the I/O is needed. Look at the labor and money you are putting into your remote I/O boxes and consider machine mount I/O the next time you are working on designing cost out of your machine.



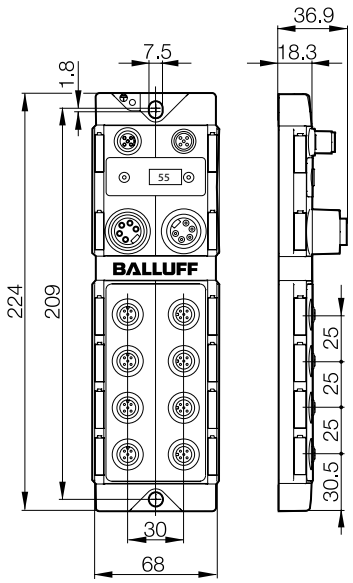
Inputs and Outputs without an Enclosure

Most CC-Link networks used for I/O are run out of the controls cabinet near concentrated sensors and actuators. A bulky enclosure is installed and everything is terminated and wired into an IP20 I/O module with high labor and component costs. This can be simplified by using IP67 rated Input and Output devices. The smaller footprint and ease of setup will reduce installation material costs and labor, as well as decrease maintenance troubleshooting and repairs.

CC-Link
Machine mount I/O blocks

CC-Link is the most dominant and fastest growing fieldbus technology in Asia, and it's quickly gaining popularity in the US. The open network is supported by the global CC-Link partner association CLPA, which comprises more than 1000 companies. CC-Link is a standardized fieldbus designed to integrate different automation components from a wide range of providers. Utilize the high-quality CC-Link portfolio from Balluff to implement your own powerful control topologies using products from a single source. These modules are the first decentralized I/O modules for the CC-Link fieldbus system available on the market.

Addressable Display
Backlit display quickly shows the station address, the communication baud rate, and the hardware/software versions. Pushbuttons allow the setting of the station address and the baud rate right at the block. The display can be locked out via the controller.



Industrial Standard Inputs
Important for many established users of CC-Link controllers, is the use of 2-wire polarized sensors. These same sensor inputs can be used with the Balluff blocks as well as 3-wire PNP or NPN inputs.

IP67 Industrial I/O
In most established CC-Link networks, I/O is ran into an IP20 enclosure, and then sensors are terminated in the box with intensive labor and space requirements. Process data is well protected with these IP67 blocks and the space and labor requirements are dramatically reduced.

Accessories for Balluff Network Products

As products are installed and integrated into the manufacturing process, unused ports must be covered. Designers of equipment want to be able to quickly change out broken parts or make things as tamper proof as possible. Balluff offers a solid offering of accessories in port covers, caps, and labels. If you want to make your network device tamper proof, we offer dial covers for use with Balluff network blocks. And if you are currently using someone else's network block and want to install a Balluff block, we make it easy by offering a mounting plate with major competitor hole patterns already set-up in it for easy swap out. Check out the Balluff accessories in this section for your network architecture's needs.

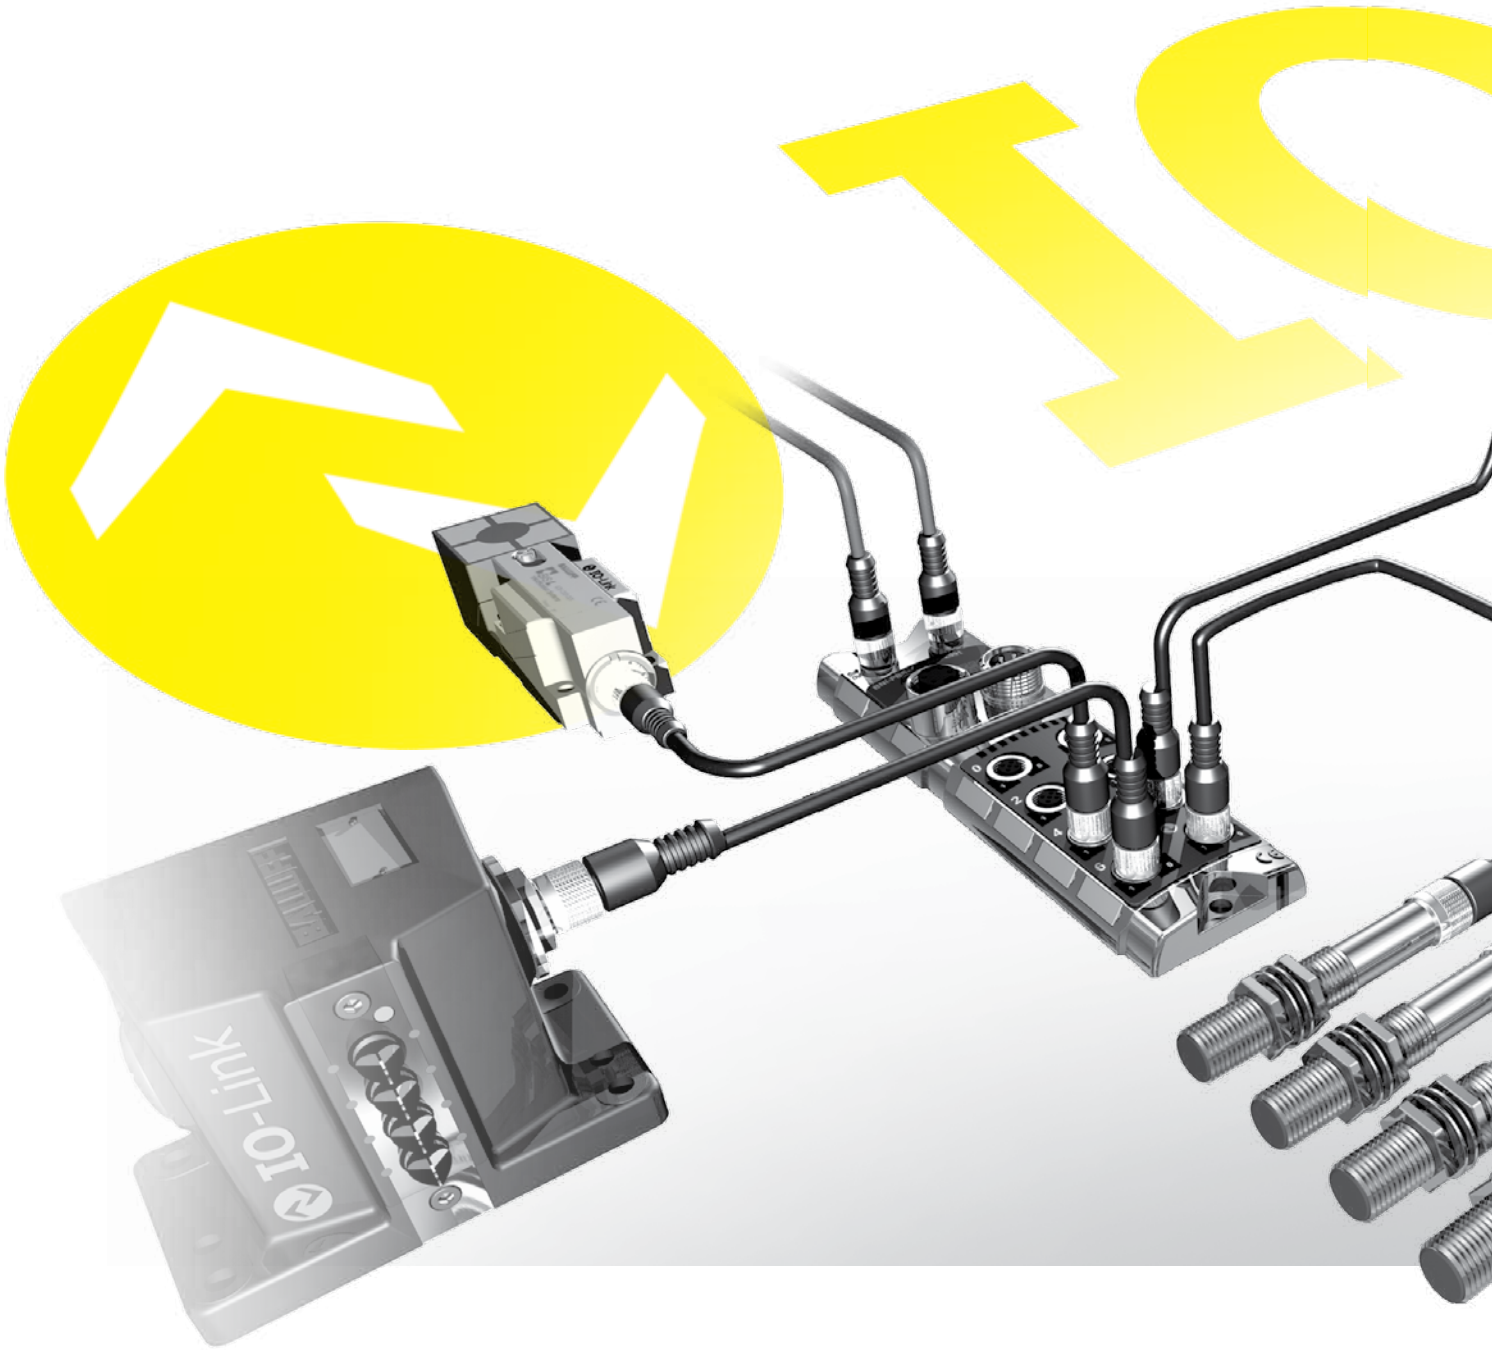
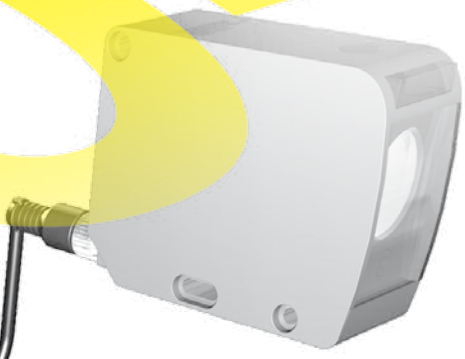
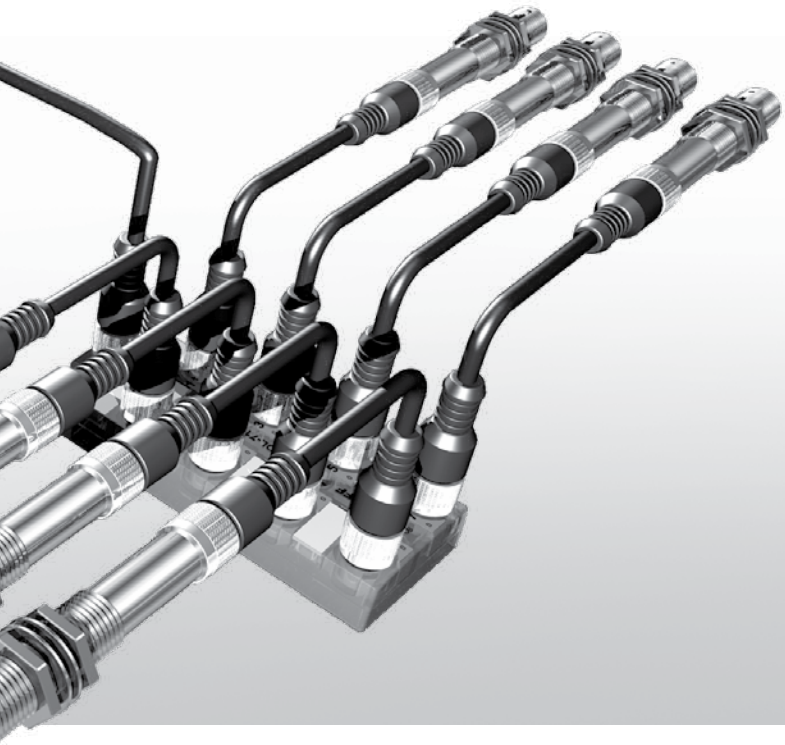
As the first standardized, uniform, universally applicable interface in control technology, IO-Link transmits all sensor and actuator signals to the controller. Likewise, IO-Link passes control data down to the lowest sensor level. All of this makes automation even more powerful than ever before.

IO-Link advantages at a glance
– Easy to get started, time-saving installation
– Automatic adjustment during operation
– Continuous monitoring



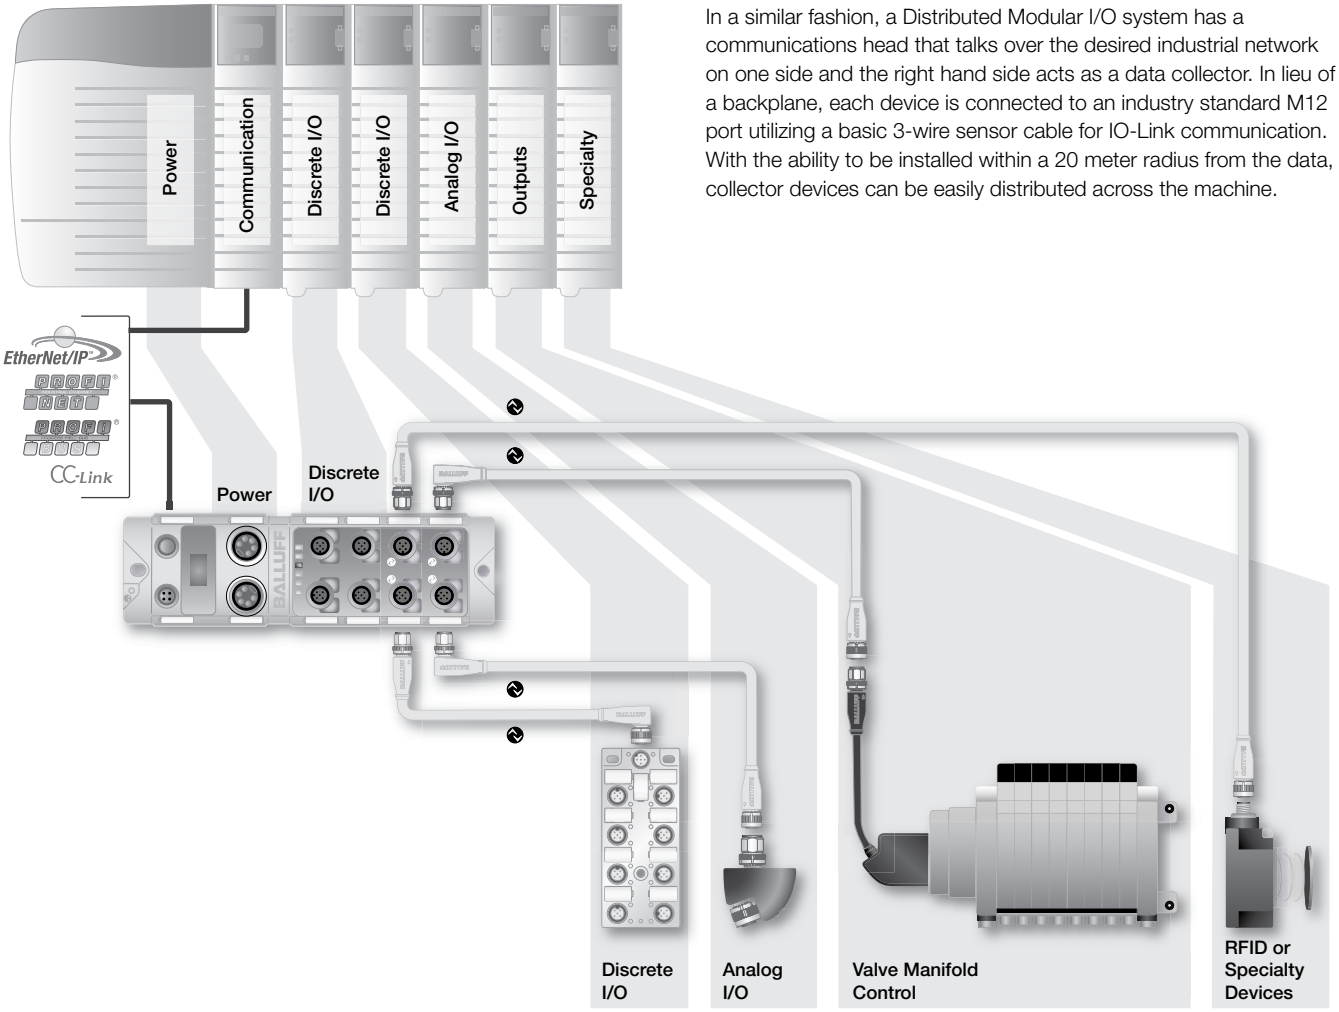




IO-Link
Distributed Modular I/O

IO-Link
What is Distributed Modular I/O?

Think of a remote “slice” I/O solution. In a typical application, the communication head and the power supply sit on the left hand side and are followed along the backplane by the individual I/O devices, such as discrete 24V input cards or 0-10V analog cards. Usually there are a limited number of slots available in the backplane and individual slices of control components can be inserted.



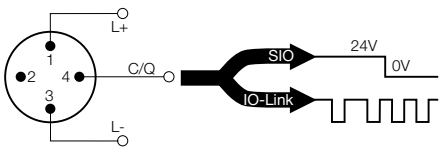
In a similar fashion, a Distributed Modular I/O system has a communications head that talks over the desired industrial network on one side and the right hand side acts as a data collector. In lieu of a backplane, each device is connected to an industry standard M12 port utilizing a basic 3-wire sensor cable for IO-Link communication. With the ability to be installed within a 20 meter radius from the data, collector devices can be easily distributed across the machine.

The backplane of Distributed Modular I/O = IO-Link

Utilizing a widely accepted and open point to point technology, IO-Link, a Distributed Modular I/O system is fieldbus independent, is easily configured and is vendor neutral. Process data shows up as simple packets of bytes in the controller for easy integration. The parameterization data allows the devices to be quickly configured using simple read/write commands, and best of all, there is no “sub-bus” to cause headaches, nor is there some new protocol to be educated on. The digital signal is carried over pin 4 of a standard cable and 24V power is provided to the device in a standard configuration. If required, the IO-Link port can be used for a standard I/O point.

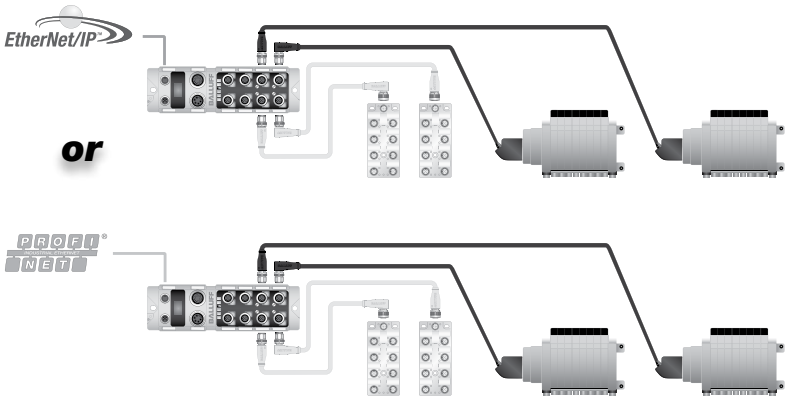
3 Wire or 4 Wire Sensor Cable

20 Meters maximum



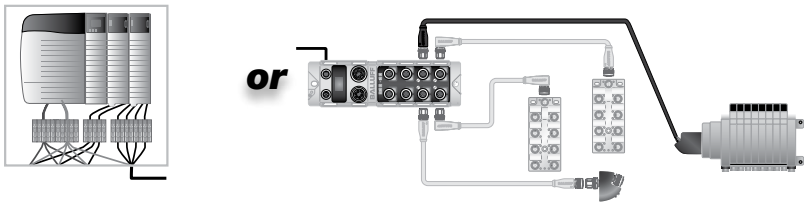
Simplify Controls Quotation Process

Utilize the same components for I/O regardless of the PLC brand or industrial network selected. Pricing for control equipment can be standardized from machine to machine and calculations are easily expandable.



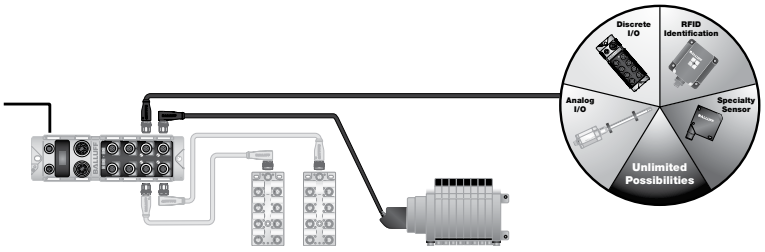
Reduce Total Cost per Point

Simplify the labor involved in parallel wiring a valve manifold or terminating a set of discrete sensors. Analog devices can get costly with shielded cable runs and expensive four channel analog input cards, especially when there is only a need for one analog channel. Distributed Modular I/O reduces hardware setup labor and can be customized to reduce I/O hardware costs.



Maximize Spares

Most initial designs include a set of spare I/O points for later development or modifications. Whether the customer wants to add a few discrete sensors to the design or there is a need to add a single channel of analog to the machine, spares and additions to the design can add major cost to the control's bill of materials. With this solution, spare connections can be a flexible placeholder for any type of I/O until the need arises.



IO-Link

Types of Distributed Modular I/O devices

Discrete I/O

M8 ports
– Up to 16 inputs

M12 ports
– Up to 16 inputs
– 16 outputs
– 16 configurable

IP20 terminals
– Up to 16 configurable

Analog I/O

1 channel (14 bit)
– 0-10 V in/out
– 4-20mA in/out
– PT100 in

4 channels (10 bit)
– 0-10 V
– 4-20mA
– plus 8 inputs

Valve Manifold Control

25 pin D-sub

IP67 & Terminal

Specialty Devices and RFID

Measurement and position sensors

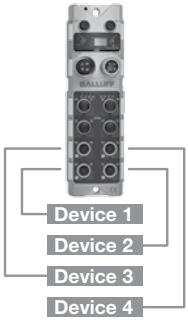
RFID
– Read/write
– Read only

Non-contact connectors
– 3 bytes to 11 bytes

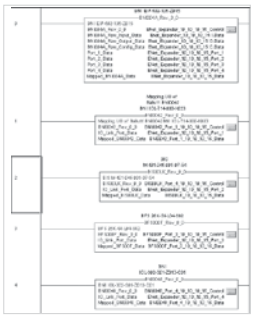
While hardware selection is important to the success of a project, if the hardware is not easily integrated into the engineering software, any benefits gained could be lost. However, Distributed Modular I/O is easily integrated into typical engineering software with an easy three step process. Below are examples of how to integrate industrial ethernet solutions. These steps can also be easily implemented on industrial bus networks.

EtherNet/IP™

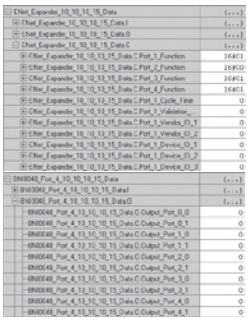
Step 1
Select hardware



Step 2
Import add on instructions (AOI)



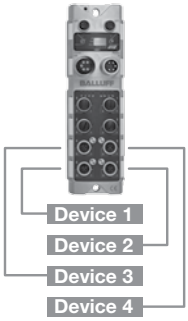
Step 3
Create user defined tags (UDTs)



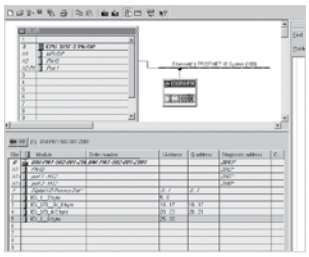
www.balluff.com/AOI

PROFINET INDUSTRIAL ETHERNET

Step 1
Select hardware



Step 2
Configure Profinet expander and expansion devices from one screen using GSD and GSDML files



Step 3
Assign I/O to user defined address scheme

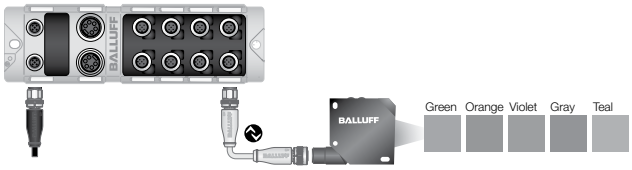
	Address	Symbol	Display format	Status value
1	IB 5		DEC	
2	IB 6		DEC	
3	IB 10		DEC	
4	IB 11		DEC	
5	QB 10		DEC	
6	QB 11		DEC	
7	MW 20		HEX	
8	QW 20		HEX	
9	MW 25		HEX	

Device parameterization and configuration

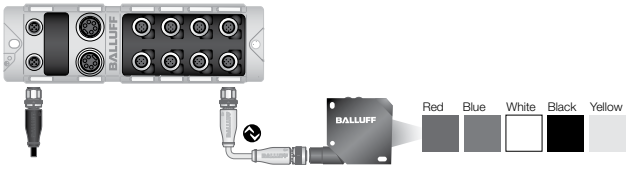
There are multiple advantages to device parameterization. The two major advantages are the ability to quickly swap out a failed device and the ability to reconfigure a device for a recipe or production change on the fly. The controller stores the necessary data for each setup and, when needed, it sends the parameters via the network over the backplane to the slave device. This can shorten setup times and increase efficiency.

Color Sensor Example

While running project A, the color sensor is configured to detect the difference between five different colors as parts are loaded into a fixture.

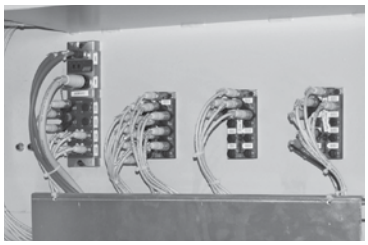


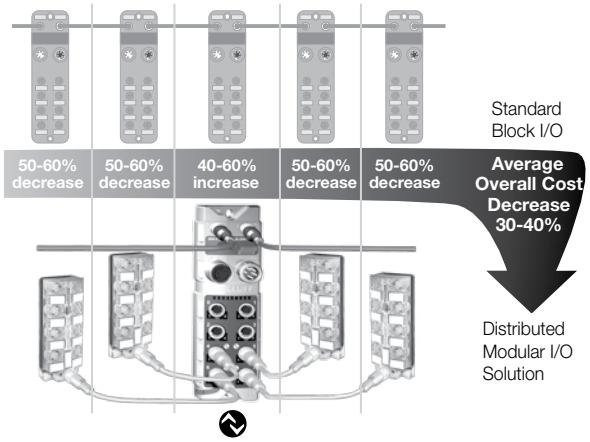
After the required parts are run off, a new project is begun with a different color set. In the past, a second color sensor would be required, or the operator would have to reprogram the current sensor for each new color. By using device parameterization, the controller tells the sensor its configuration for project B and quickly, without hassle, the sensor has its new colors.



Discrete I/O Savings

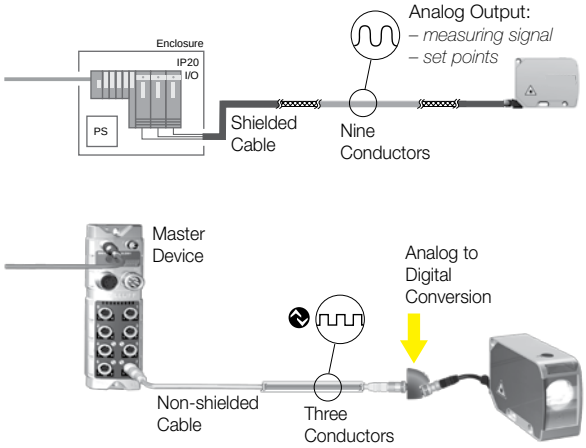
Machine builders looking to lower the cost per point for discrete I/O gain many advantages with Distributed Modular I/O. Reduced cable and device costs can save an OEM 15-60% over traditional I/O systems.





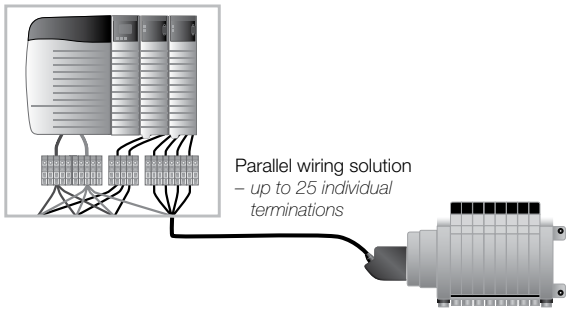
Analog I/O Savings

One channel of analog I/O can add significant cost to a typical machine design in components, cables, and labor. By putting the analog I/O right at the signal's source, the complications and costs can be significantly reduced.



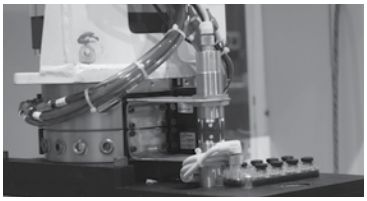
Valve Manifold Control

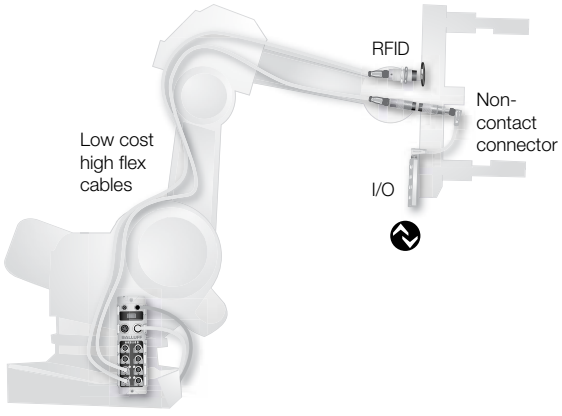
Every pneumatic action requires valve control. The typical parallel wiring of valve manifolds can be labor intensive and add dramatically to cabinet space and setup time.



Quick Tool Change

With the increasing demand for multiple recipe manufacturing, the need to quickly change tooling on a robot or in a fixture is growing. Utilizing multiple technologies, the connection can be made quickly without failure; tool verification can be included with RFID. This speed has improved our customers' throughput by 15%.





IO-Link

Flexible IO-Link Master Blocks

Each port of the Balluff IO-Link master block can be configured to fit any IO-Link and/or discrete application. The top 4 ports can be configured as NO/NC inputs, outputs, or diagnostic points depending on the block type. The bottom 4 ports can be configured as IO-Link or as any of the discrete settings, depending on the block type.

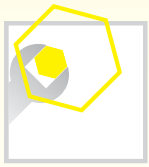
Reduce Costs

- Connect devices with standard sensor/actuator cordset
- Simplify cordset stocking with universal M12 standard connectors on IO-Link devices
- Secure investment with open standard, valid from all manufacturers
- Future-proof, with greatest flexibility in project planning

Reduce Engineering and Commissioning

- Commissioning performed by the controller, not at each individual IO-Link device
- Scalability of each IO-Link port
- Same architecture for different network protocols
- Fewer network nodes and IP addresses to commission



Reduce Maintenance

- Capability of plug, play, and walk away
- Automatic read adjustment of parameters
- Reliable error detection
- Troubleshoot a point-to-point connection, rather than a network

Increase Uptime

- Recipe driven parameterization of IO-Link devices
- Health diagnostics down to the IO-Link device level
- Network cable can be removed from harsh areas, replaced by standard sensor/actuator cordsets
- Continuous monitoring of process parameters

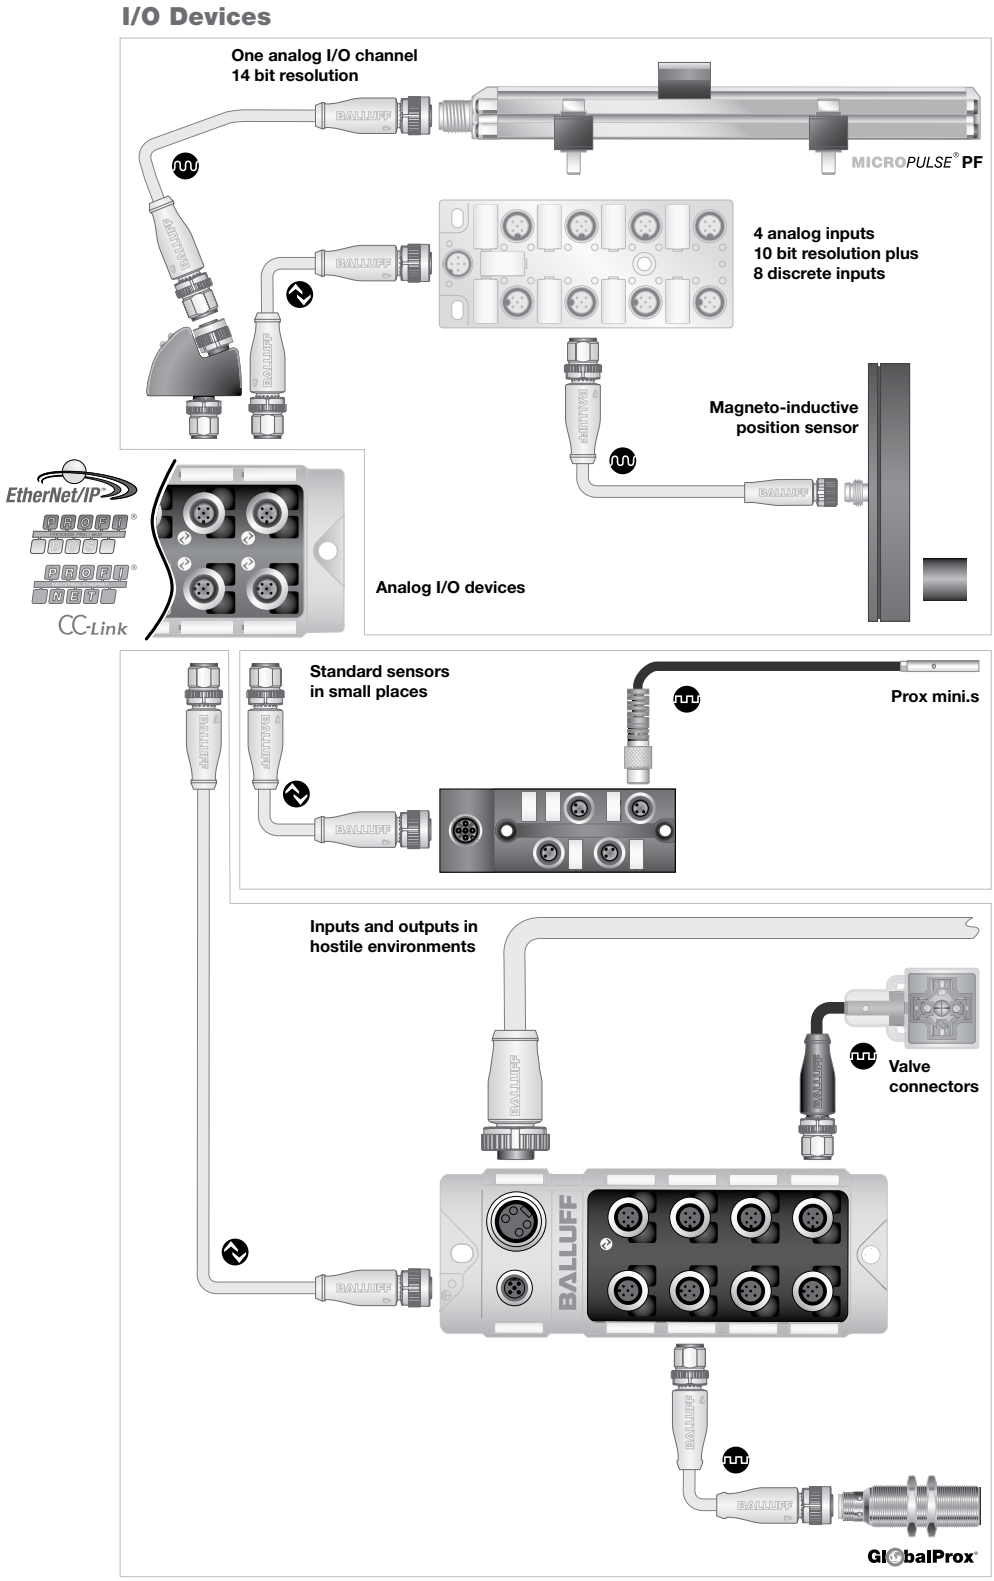
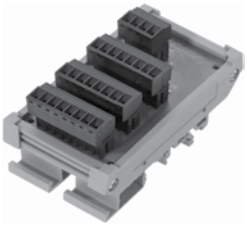
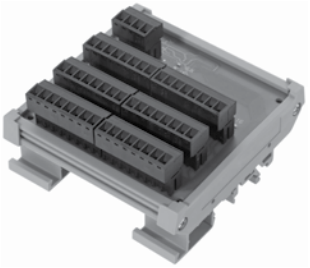
IO-Link Input/Output Devices

One of the major values of IO-Link over standard network I/O is the ability to run many sensors and actuators back through one node or IP address. This is accomplished using the many varieties of I/O hubs offered by Balluff.

- Multiple analog sensors can be run into an input hub with discrete inputs as well
- Balluff's full line of mini sensors can be run in small spaces using M8 hubs
- Metal Inputs and Outputs allows for I/O in the most hostile environments







IP20 terminal I/O hubs are designed for use in custom projects like small push button or indicator stations.

IO-Link

Connectivity Products with IO-Link

IO-Link's versatility can be seen in the deep product offering covered in these pages. There are times when a standard sensor cable is just not enough. Maybe you need to have I/O on constantly changing end effectors or a rotating fixture. Valve banks with built in network control can add additional costs to a project. Then there are the times you wish you could just hook the device to your computer, just to get that extra bit of interaction with the device. All of these things are capable with IO-Link by Balluff.

- Non-contact connectors allow for quick change out and free rotation without loss of power or signal
- Remove costly valve bank network controllers and go to an intelligent 25-pin D-sub connector
- Connect directly to any IO-Link device with your computer for easy setup or parameterization

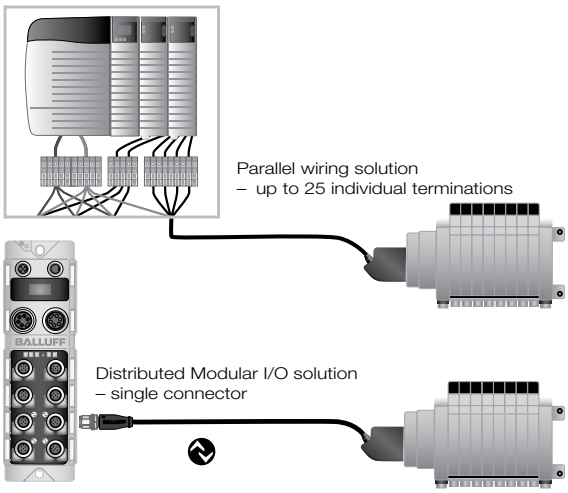
Valve manifold control utilizing Distributed Modular I/O

When controls engineers get involved in specifying valve manifolds a slippery slope can develop. Where does the mechanical design end and the electrical design begin? Being able to order simple valve manifolds with 25-pin D-sub connectors removes this situation and provides multiple advantages: these valves are low cost, they are simple to wire and they are typically standard off the shelf components so they are easy to repair. But terminating the 25 wires and trying to troubleshoot these multiple connections can be time consuming and costly. By utilizing an industrial network and a Distributed Modular I/O valve manifold connector, cost and time of installation and repair can be dramatically reduced.

- Max 0.7A per output and up to 1.1A total can be active at once
- Connector provides a 0V common on pin 25 and 24V signals
- Up to 16 output positions can be controlled per manifold
- Up to 4 manifolds can be controlled per master device
- Communication speeds between the master and valve control of 2ms



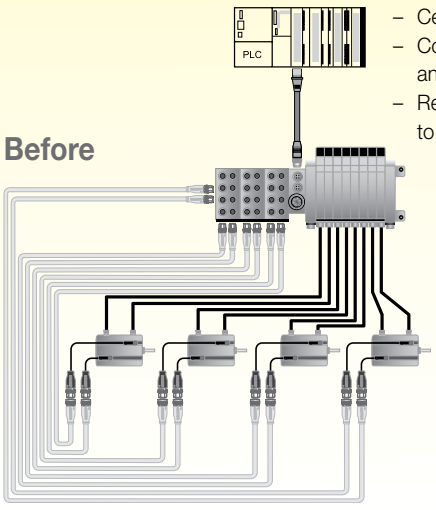
Valve Mainifold Control over EtherNet/IP

In this conveyor application, a few cylinders are being used for gate control to help sort packages as they come through the process. The valve manifold has a simple 25pin D-sub connector controlling 7 positions on the conveyor. Controlling the valve manifold is a 25pin D-sub valve manifold controller with IP40 protection. This connector is then plugged into an EtherNet/IP master device and the controller sees the valve manifold over the network as a simple 2 bytes of output data. An auxiliary power output, from the master, controls the device power and can turn on or off control to the outputs when necessary. Four manifolds can be controlled on one EtherNet/IP master and the manifolds can be up to 20 meters from the master device.

Valve Mainifold Control via Distributed Modular I/O

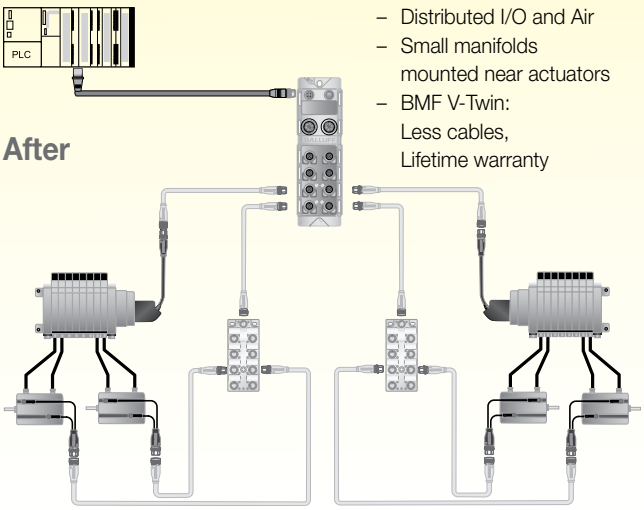
Pneumatic Systems Improvement – BMF V-Twin & Valve Manifold Control

Network Manifold with Reed Switches



– Centralized Air and I/O
– Congested with pipes and cables
– Reed switches prone to failure

BMV V-Twin & Valve Manifold Control



– Distributed I/O and Air
– Small manifolds mounted near actuators
– BMF V-Twin: Less cables, Lifetime warranty

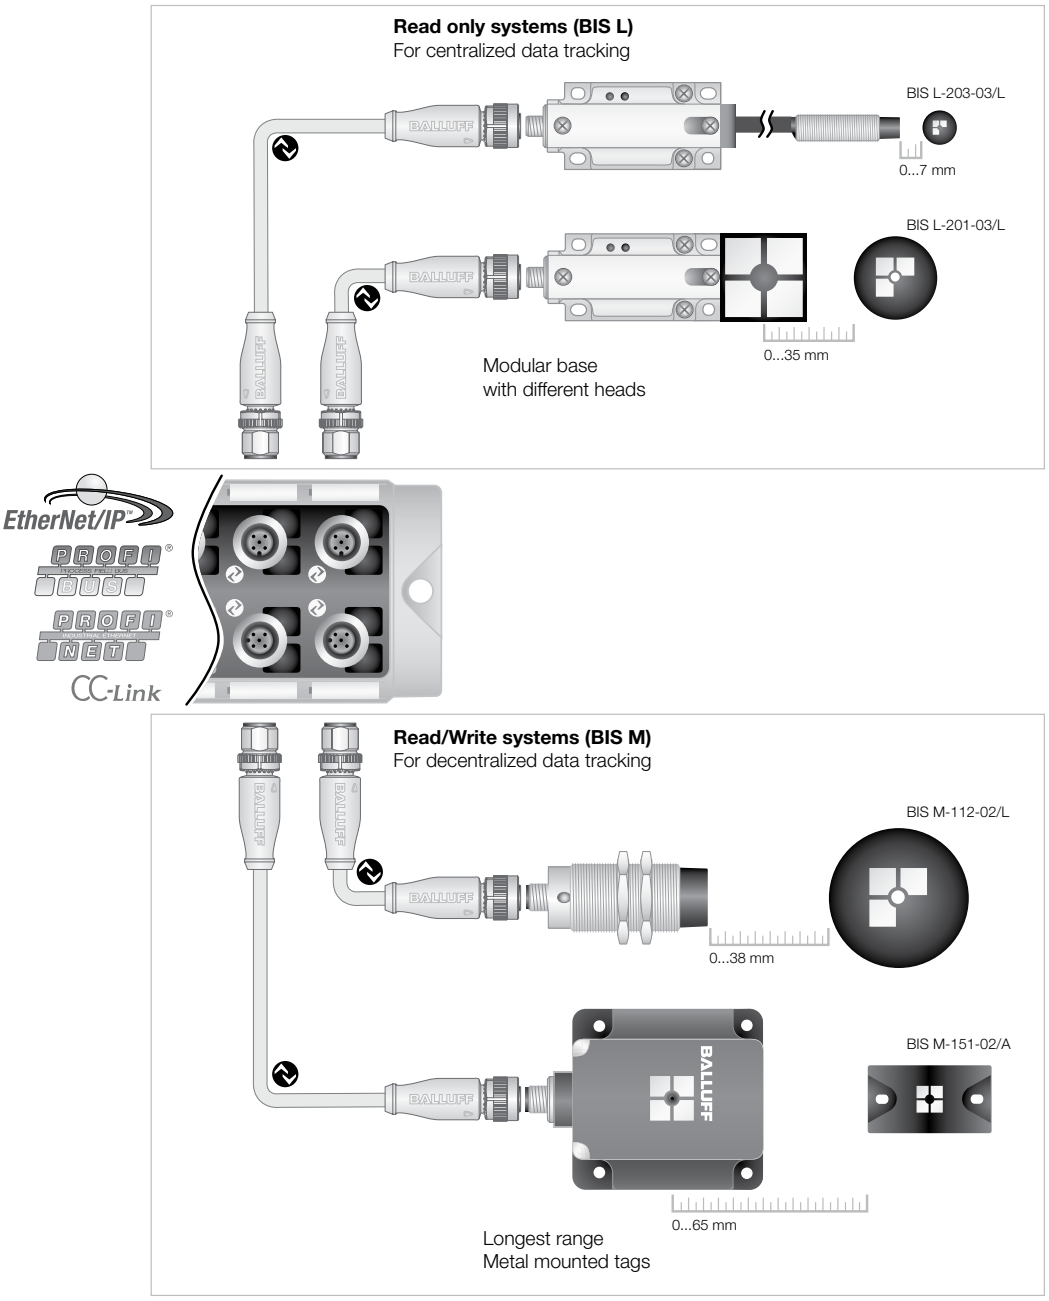
Data Tracking with Industrial RFID using IO-Link

In today's manufacturing environment, it is becoming more and more important to track every step of the production process. Many manufacturers have installed barcode systems or hand written paper work filed by operators or maintenance crews. This can be time consuming and prone to failure. Industrial RFID systems can be used to track production data and record plant floor information in every step of the process. There are two main ways to track part data.

- **Centralized Data Tracking**: All of the information is stored in a central computer and the RFID system is used only for identification of the part in the work cell. This is a very similar concept to barcoding, but it is more rugged and 100% reliable. (Read Only Systems)

- **Decentralized Data Tracking**: Data per part is stored on the RFID tag and is written to the tag at each workstation. This concept allows for the data to always stay with the part throughout the production process.



Select your RFID system in 4 easy steps:

1. Decide whether you need to write data to a data carrier.

   Yes ➔ see page 2.18

   No ➔ see page 2.17

2. Choose the appropriate data carrier form factor.
3. Determine the head based on distance.
4. Determine your required memory capacity.

IO-Link
Advantages of intelligent sensors

As manufacturing becomes even more competitive and the demand for flexibility rises, we begin to ask tough questions to ourselves, our machine builders and our component suppliers:

- How do I increase my production throughput and maintain quality?
- How can I predict sensor or machine failure?
- What can I do to decrease my unplanned downtime?
- Where and how often are most failures occurring?
- How do I get more detailed information out of the system?

The ideal solution to these questions is a system that can easily provide status information from the health of a PLC and industrial network down to the individual sensor location at one work station. The system could predict impending issues and automatically direct action to solve the issue before it causes production to stop. In addition the system should be able to be flexible and adjust to multiple configurations, sizes, colors, etc.

Intelligent sensors are part of this solution. By providing Constant Condition Monitoring, Preventative Diagnostics and Automatic Configuration over common industrial networks, intelligent sensors provide the flexibility and detailed data required in a modern manufacturing facility.

Detailed sensor information
Exact failure location
"I'm working!"

Constant Condition Monitoring

Over the industrial network
Sensor health indication
Standard indication (ON/OFF, measurement,etc.)

Decreasing unplanned downtime
Predicting failures
"Something changed!"

Preventative Diagnostics

Unstable application diagnostics
- **Dirty lens**
- **Target too close**
- **Target outside ideal range**

Increasing equipment throughput
Increasing process reliability
Maintaining high quality
"Tell me what to do!"

Automatic Configuration

Parameter configuration
- **Remote program from the PLC**
- **Multiple Configurations stored on the PLC**
- **Control over features and functions**

Applications of intelligent sensors

Printing and Paper Example
Reliable diagnostics are extremely important for highly dynamic machines. You can identify quality issues linked to the manufacturing process in real-time and take appropriate measures immediately. In the printing and paper machine industry, for example, the machine must react to faults within milliseconds.

Color Sensor Example
While running project A, the color sensor is configured to detect the difference between five different colors as parts are loaded into a fixture.

After the required parts are run off, a new project is begun with a different color set. In the past, a second color sensor would be required, or the operator would have to reprogram the current sensor for each new color. By using device parameterization, the controller tells the sensor its configuration for project B and quickly, without hassle, the sensor has its new colors.

Using Distributed Modular I/O technology and talking over the same backplane from slave to master device, multiple intelligent sensors can be connected to one IP address on an industrial network. Depending on the complexity of the information the sensor provides or requires, any combination of 1 to 32 intelligent sensors can be connected. Utilizing the open standard IO-Link, it is also possible to mix and match with any Distributed Modular I/O products available such as: discrete I/O, analog I/O, valve manifold control, RFID and third party intelligent sensors and devices.

	Standard Sensors	Level 1 Intelligent sensors	Level 2 Intelligent sensors	Level 3 IO-Link Intelligent sensors
Maximum sensors per IP address	16 per hub 12 per master 76 per IP address	8 per hub 0 per master 32 per IP address	8 per hub 0 per master 32 per IP address	4 per master 4 per IP address

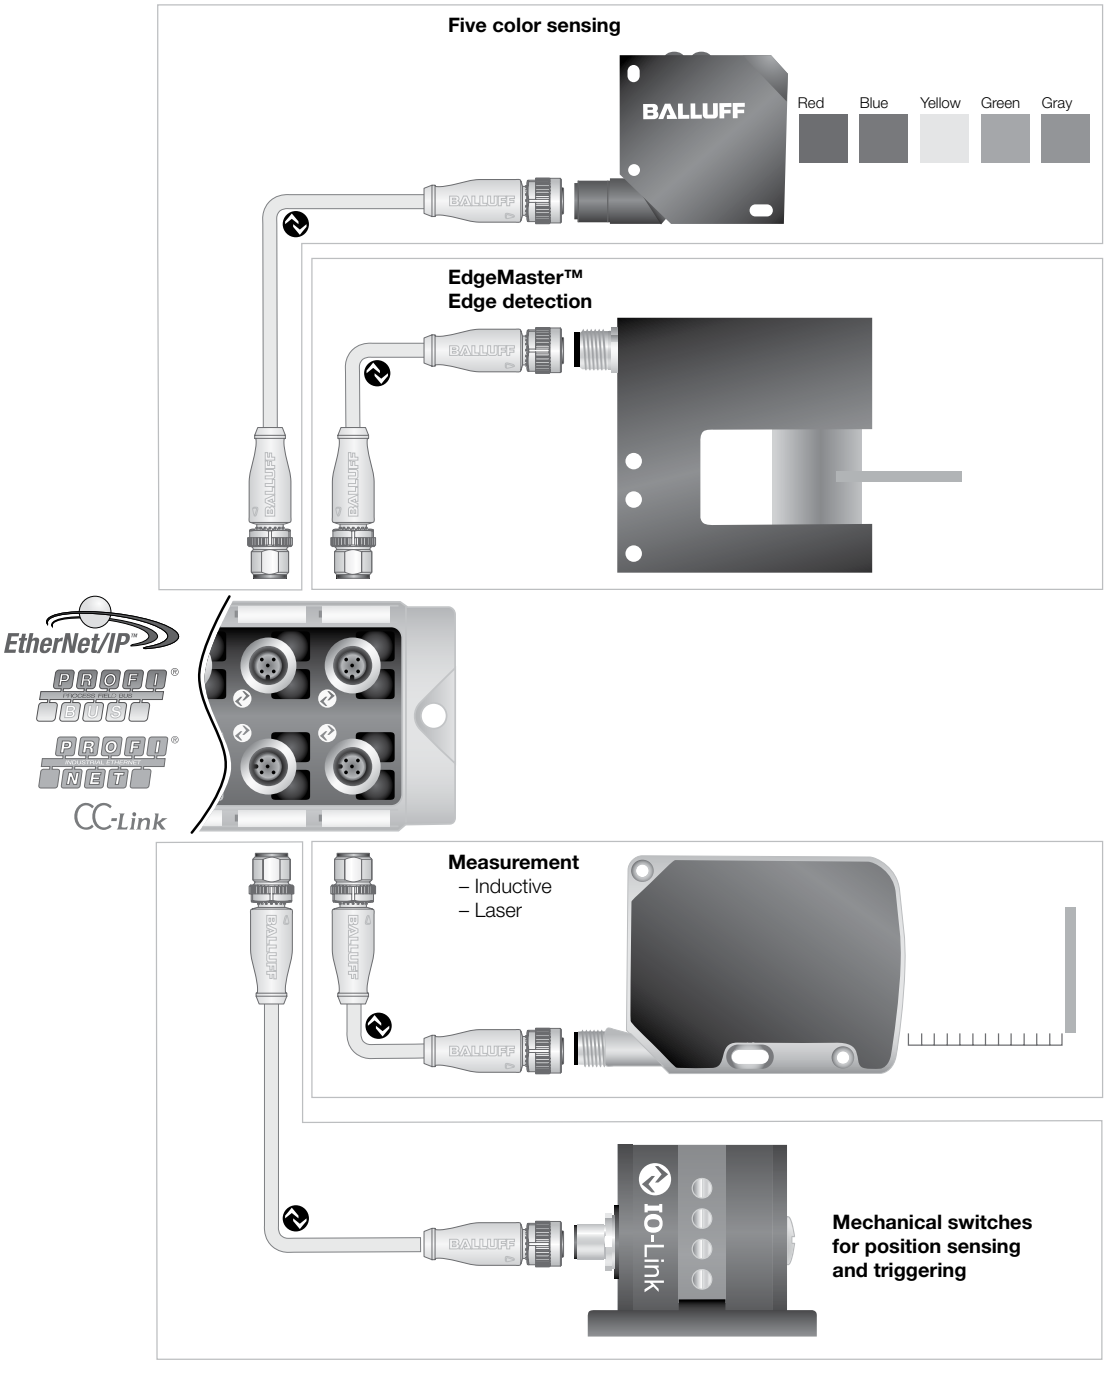
Number of Intelligent Sensors	8 (Level 1 or Level 2)
Number of Ports	8

Level 3 Intelligent Sensors with IO-Link

As manufacturing needs to get more flexible, sensors and other devices installed in the process need to be flexible as well. Right now, most production lines require the operator to reprogram a sensor, or the engineer needs to design multiple sensors into the process. Intelligent sensors with IO-Link built into them can reduce this downtime and the errors that come with reprogramming. IO-Link sensors can have their parameters changed via the PLC to accommodate multiple recipes or configurations. Some examples of sensors with this capability are:

- Color sensors for detecting product colors for error proofing or JIT (just in time) production
- Measurement sensors for detecting the position of targets or measuring their size
- Precision Mechanical Switches have been in the Balluff product portfolio from the very beginning, use their upgraded functionality by connecting them via IO-Link
- Edge detection sensors allow for positioning on machines or in production



Capacitive Ø 20 mm

Ordering Code	BCS0001
Part number	BCS 20MG10-XPA1Y-8B-03*
Switching Type	PNP complementary
Rated Switching Distance s_n	10 mm
Size, Mounting	Ø 20 mm, flush
Operating Voltage U_B	10...30 V DC
Function Indicator	Yes
Degree of Protection per IEC 60529	IP 63
Approvals	CE
Housing Material	V2A, EP
Connection	3 m cable PUR, 3×0.25 mm²

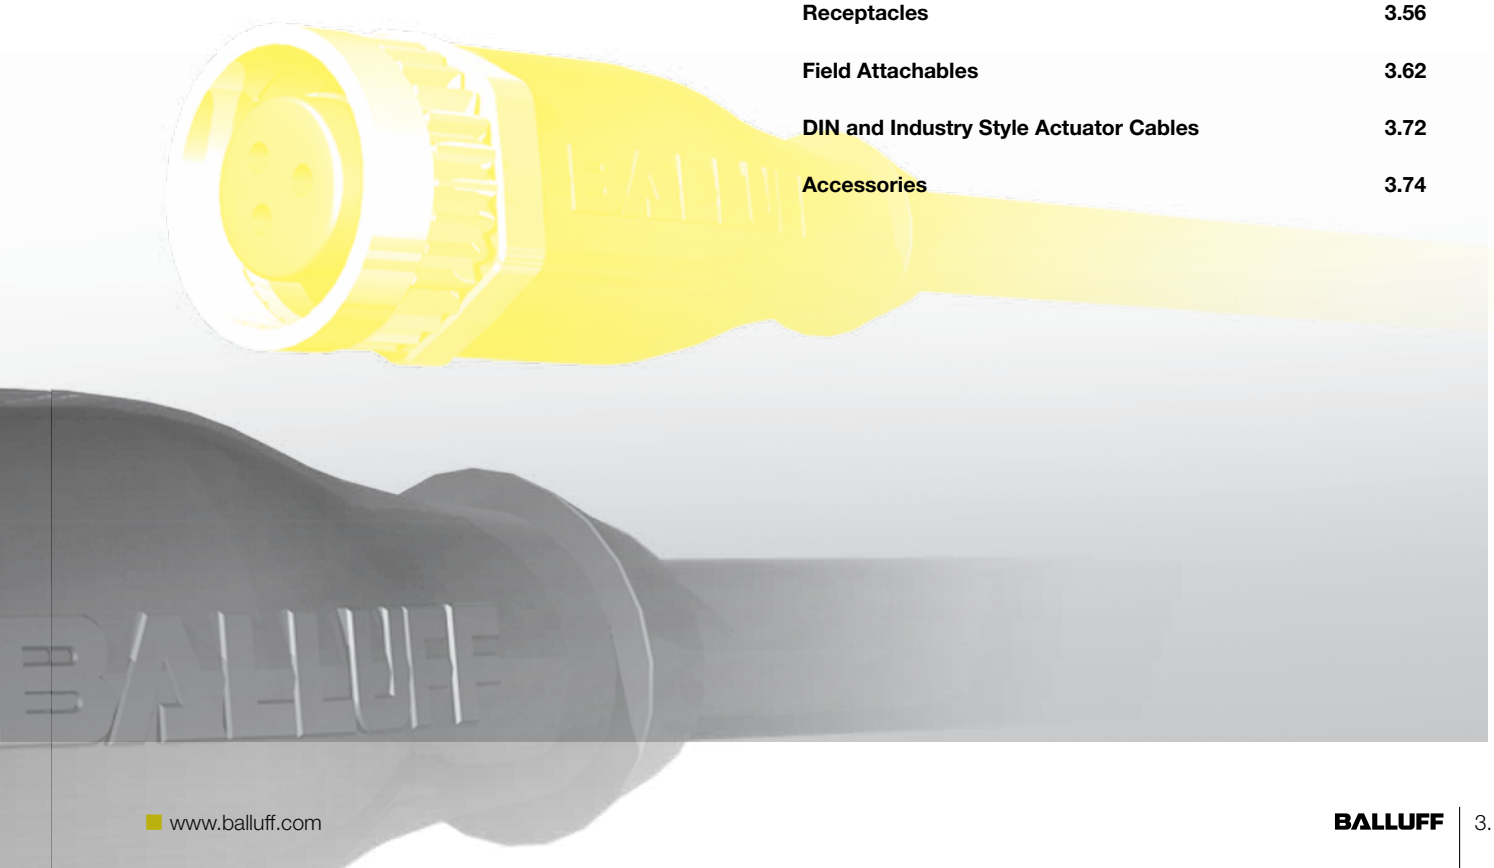
Connectivity Solutions
Contents

Balluff's new line of passive connectivity products offers a full compliment of options to establish standard sensor and actuator solutions in the automation environment. These components provide a high level of reliability and confidence, enabling accurate and repeatable connection IP ratings during maintenance. Many combinations of solutions are available and are presented below to facilitate future connectivity designs.



Connectivity Solutions
Passive connectivity overview

Balluff's new line of sensor cordsets offers many benefits to the automation world. Balluff can globally offer cordsets that fit almost any standard sensor or actuator application. This offering includes features such as consistent and accurate IP ratings, a wide range of cable jackets, a full range of overmold configurations, and high quality rugged materials.

Hex Nut and Wrench
Maintain IP rating by applying the correct tightening torque every time

Alignment Mark
Arrow symbol aligns cordset with sensor keyways

Cable Materials
High grade, industry standard jacket materials

PVC
Standard automation and washdown

PUR
Abrasion and fluid resistant, halogen free

TPE
High-flex and weld slag resistant

TPU Overmold Strain Relief
Durable material that offers strain relief when required

Bright LEDs
LEDs shine bright even in difficult applications. Available with 2 or 3 LEDs

M8 and M12 Cordsets
Standard industrial connector sizes

Black PUR

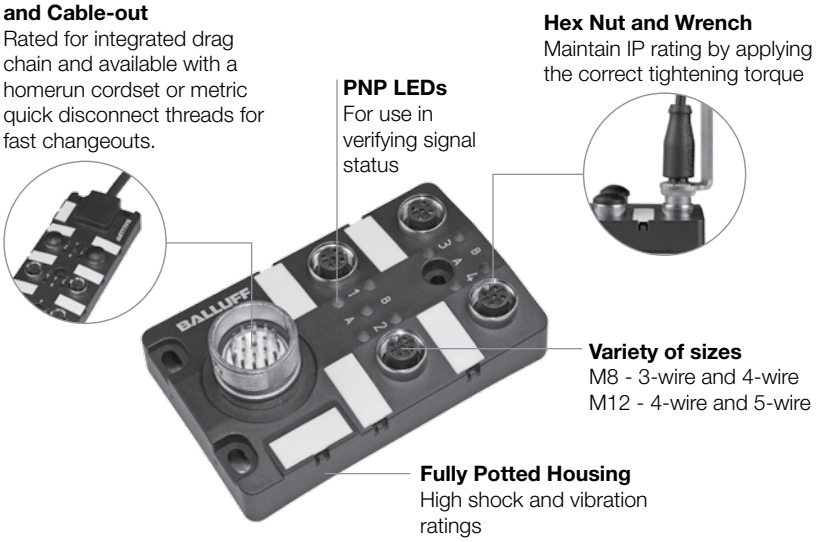
Gray PVC

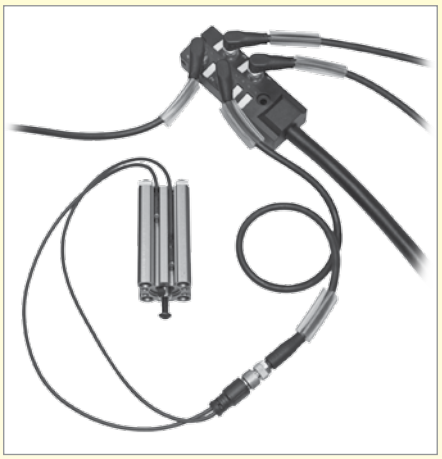
Yellow PVC, PUR, and TPE

PVC, PUR, and TPE with LEDs

Multiple Interface Blocks (MIB)

Balluff multiple interface blocks allow multiple sensors and actuator signals to be easily routed back to a control system. These fully potted blocks with metal threaded ports carry high shock and vibration ratings and are well-suited for many types of environments. The combination of Balluff's multiple interface blocks, cordsets and torque wrenches, provides a robust IP67 solution for a wet environment.

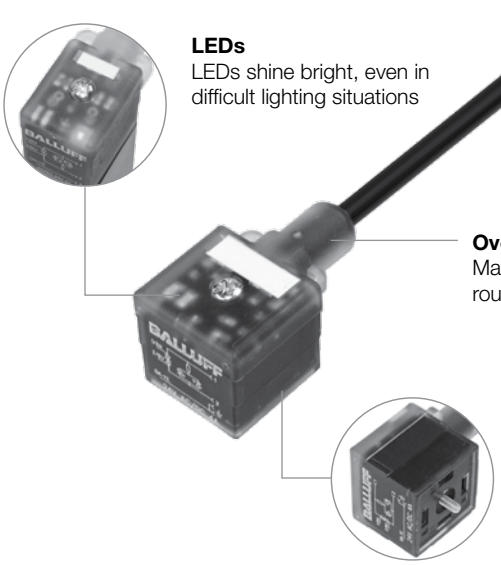


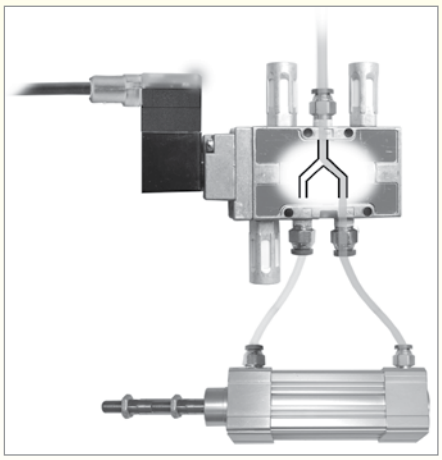


By incorporating passive technology, these blocks concentrate signals into one homerun cordset. The dual density connectors allow for two signals per port. A typical application would include a Balluff V-Twin™ magnetic field sensor used with pneumatic cylinders. The V-Twin provides two sensors with a single connector, which sends both signals through the single cordset back to the high density MIB. This solution reduces sensor and cabling costs without sacrificing reliability or quality.

Valve Connectors

From sensors to cordsets, Balluff offers an extensive line, which includes valve connctors. These valve connectors cover all standard DIN connections, while also offering drag chain rated cables, rugged housings, and an option of protective circuits. Balluff can essentially complete any valve connector solution.





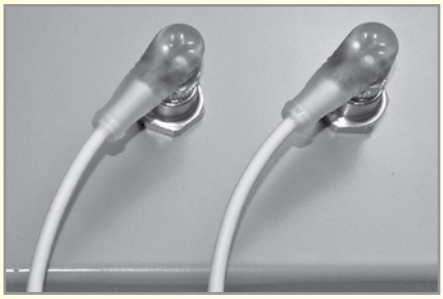
While DIN & Industry style connectors are used in many industrial automation applications, the most popular uses are with simple motors and solenoid valves. As with most solenoid valve applications a DIN or Industry style connector is required to switch the valve's position. Whether the application is clamping a part or moving an object, the Balluff valve connector can be used to pass the control signal to the valve. Integrated LEDs allow for easy recognition of solenoid position.

Connectivity Solutions
Passive connectivity applications

Welding and Rugged Environments

When working in rugged environments, it's important to choose a cordset that will stand up to the harshest situations - TPE is the cable jacket of choice. The use of LED cordsets is also beneficial for troubleshooting.

I/O Verification for Troubleshooting



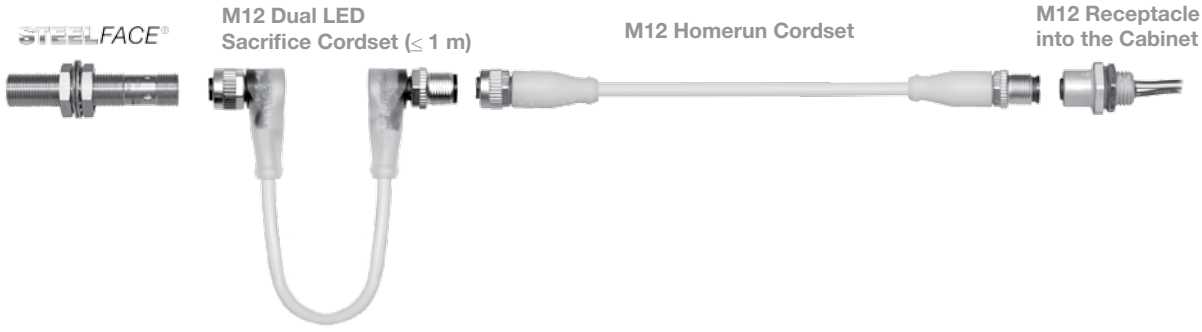
Selecting LEDs on the male ends of your cordsets allows for the sensor and output signals to be easily viewable and allows for simpler input or output indication for the operator.

Cordset Options and Solutions

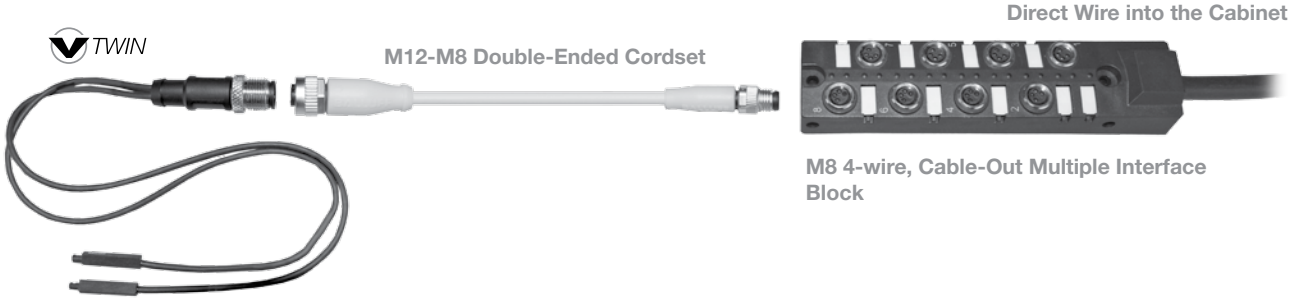
Balluff's new line of passive connectivity products offers a full compliment of options to establish standard sensor and actuator solutions in the automation environment. These components provide a high level of reliability and confidence, enabling accurate and repeatable connection IP ratings during maintenance. Many combinations of solutions are available and are presented below to facilitate future connectivity designs.

Basic Connectivity Solution: Used in simple, low sensor count applications

Sacrifice Cordset Solution: Used in extremely rugged applications to reduce cordset replacement downtime



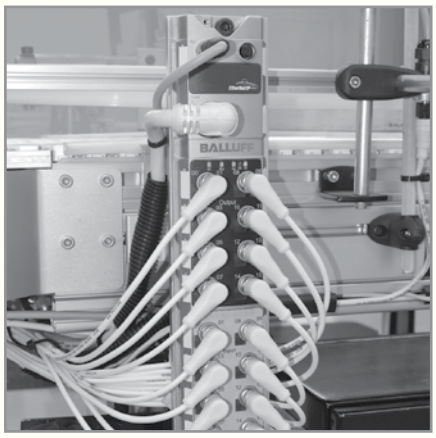
Distributed I/O Solution: Used when many sensors and actuators are installed in various clumps around the machine



Washdown and Wet Applications

Fluids and sensor signals do not mix. By using a calibrated IP67 torque wrench on the hex nut of every cordset, you can ensure the IP67 rating of the multiple interface block with the cordset - and keep your signals dry.

Packaging and Assembly Automation



When quality is as important as speed in your application, select a PUR cordset, which provides flexibility as well as abrasion and fluid resistance. In a standard automation application, select a PVC cordset that is reliable and cost effective.

High Density Distributed I/O: Used when many sensor and actuator signals are needed for a production line or a highly automated machine

Balluff's new line of sensor cordsets offers many benefits to the automation world. Balluff can globally offer cordsets that fit almost any standard sensor or actuator application. This offering includes features such as consistant and accurate IP ratings, a wide range of cable jackets, a full range of overmold configurations, and high quality rugged materials.

Select your cordset in 4 easy steps:

1. Pick your connector types (single/double, right angle/straight)
2. Pick your electrical information and LEDs
3. Pick your jacket material and color
4. Pick your cordset length

Complete Part Number Example:

BCC M415-0000-1A-008-VX44T2-050

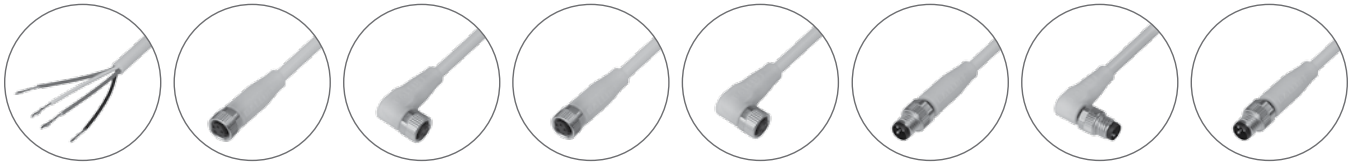
- M12 single ended, straight female (M415-0000-1A)
- 4-wire, 2x PNP LED (008)
- Yellow PVC, 4-wire (VX44T2)
- 5 m cable (050)

Step 1

BCC_ _ _ _-_ _ _ _-_ _ -_ _ _-_ _ _ _ _ _-_ _ _

Cordset Connector Selection
Single-ended and double-ended cordsets can be made using the chart below. Available in industry standard M8 and M12 sizes, these cordsets come in a variety of head combinations; single-ended, straight to straight, right angle to straight, and right angle to right angle. To select your cordset, start by selecting the female connector that will match your sensor. Next, follow the row across until you find the required end that will go back to your controller, homerun cordset, MIB, etc.

		Male (controller, homerun cable, MIB end) →				
Female (sensor end)	**Connector Types**	**Single Ended Female**	**3-wire M8 Straight Male**	**3-wire M8 Right Angle Male**	**4-wire M8 Straight Male**	
	Single-Ended Male		M313-0000-20	M323-0000-20	M314-0000-20	
	M8 Straight Female 3-wire	M313-0000-10	M313-M313-30	M313-M323-30		
	M8 Right Angle Female 3-wire	M323-0000-10	M323-M313-30	M323-M323-30		
	M8 Straight Female 4-wire	M314-0000-10			M314-M314-30	
	M8 Right Angle Female 4-wire	M324-0000-10			M324-M314-30	
	M12 Straight Female	M415-0000-1A	M415-M313-3F	M415--M323-3F	M415-M314-3F	
	M12 Right Angle Female	M425-0000-1A	M425-M313-3F	M425-M323-3F	M425-M314-3F	



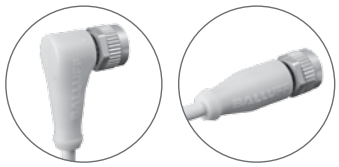
Single Ended | M8 Female 3-wire | M8 Female 3-wire | M8 Female 4-wire | M8 Female 4-wire | M8 Male 3-wire | M8 Male 3-wire | M8 Male 4-wire

Step 2

BCC_ _ _ _-_ _ _ _-_ _ -_ _ _-_ _ _ _ _ _-_ _ _

Cordset Wiring and LEDs
Both 3- and 4-wire cordsets are available in single- and double-ended cordsets, as well as two and three LEDs. To select your cordset, start with Step 1 on previous page. Then decide if you need 3- or 4-wire and whether or not you want an LED in the overmolded head.

Single Ended Cordsets			
Head 1 and 2	**3-wire N/O**	**3-wire N/C**	**4-wire**
No LED	001	002	003
2x PNP LED	004	005	008
3x PNP LED**			010
2x NPN LED	006	007	009



No LED

Double Ended Cordsets			
Head 1	**Head 2**	**3-wire N/O**	**4-wire**
No LED	**No LED**	300	304
2x PNP LED	**No LED**	602	606
3x PNP LED**	**No LED**		650
2x NPN LED	**No LED**	603	607
2x PNP LED	**2x PNP LED***	302	306
2x NPN LED	**2x NPN LED***	303	307
3x PNP LED**	**2x PNP LED***		651

2x LED 3x LED

2x = 1 power LED and 1 signal LED
3x = 1 power LED and 2 signal LEDs

*M12 right angle male only
**M12 right angle female only

	Male (controller, homerun cable, MIB end)				
	4-wire M8 Right Angle Male	**3-wire M12 Straight Male**	**3-wire M12 Right Angle Male**	**4-wire M12 Straight Male**	**4-wire M12 Right Angle Male**
	M324-0000-20	M413-0000-2A	M423-0000-2A	M414-0000-2A	M424-0000-2A
		M313-M413-3E	M313-M423-3E		
		M323-M413-3E	M323-M423-3E

M8 Male 4-wire | M12 Female | M12 Female | M12 Male 3-wire | M12 Male 3-wire | M12 Male 4-wire | M12 Male 4-wire

Step 3

BCC_ _ _ _-_ _ _ _-_ _ -_ _ _-_ _ _ _ _ _-_ _ _

Raw Cable Type
To select your raw cable, first decide on the correct jacket for the application and then on a jacket color.
- PVC: For standard automation applications
- PUR: For abrasion and extreme fluid resistance
- TPE: For High-flex and for use in heavy duty environments

Jacket Color and Material				
Material	**Color**	**Conductor**	**3-wire**	**4-wire**
PVC	Yellow	22 AWG	VX43T2	VX44T2
PVC	Gray	0.34 mm²	VX8334	VX8434
PUR	Yellow	22 AWG	PX43T2	PX44T2
PUR	Black	0.34 mm²	PX0334	PX0434
TPE	Yellow	22 AWG	EX43T2	EX44T2

Step 4

BCC_ _ _ _-_ _ _ _-_ _ -_ _ _-_ _ _ _ _ _-_ _ _

Cordset Length
Select from our standard cordset lengths below. Contact the factory for custom cordset length selections.

Connectivity Solutions
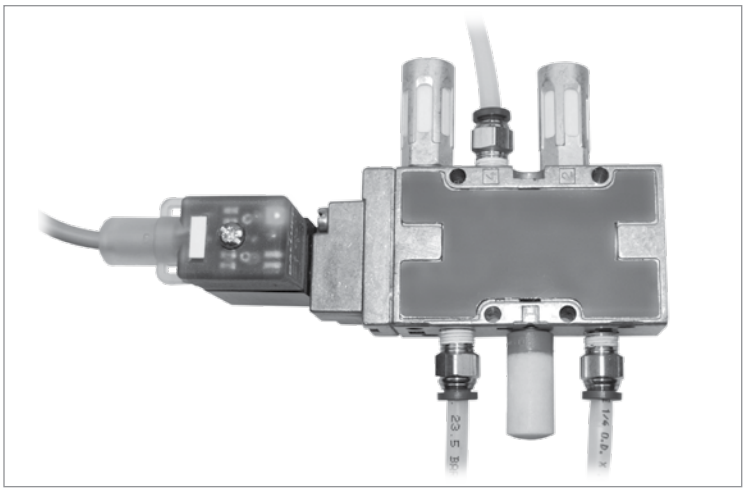
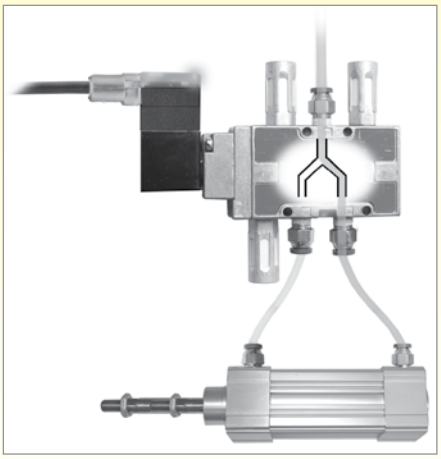
DIN A style actuator cables

From sensors to cordsets, Balluff offers an extensive line, which includes valve connectors. These valve connectors cover all standard DIN connections per EN175301, while also offering drag chain rated cables, rugged housings, and an option of protective circuits. Balluff can essentially complete any valve connector solution.





While DIN & Industry style connectors are used in many industrial automation applications, the most popular uses are with simple motors and solenoid valves. As with most solenoid valve applications a DIN or Industry style connector is required to switch the valve's position. Whether the application is clamping a part or moving an object, the Balluff valve connector can be used to pass the control signal to the valve. Integrated LEDs allow for easy recognition of solenoid position.

IP67 Torque Wrenches

By using a calibrated IP67 torque wrench on the hex nut with every cordset, you can ensure the IP67 rating at the sensor or at the MIB, which will protect your sensor signals even in the wettest environments.

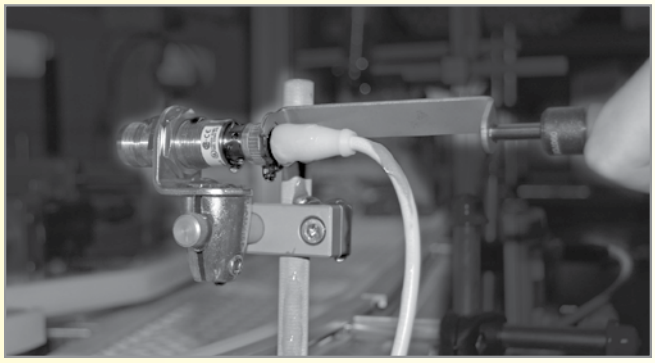
Description	Order Code	Part Number
M8, 0.4 Nm torque rating	**BAM00ZL**	BAM TO-CC-001-M3-0,4/8,0
M12, 0.6 Nm torque rating	**BAM00ZM**	BAM TO-CC-001-M4-0,6/12,0
7/8", 1.5 Nm torque rating	**BAM00ZN**	BAM TO-CC-001-A3-1,5/24,0

M23 Assembly wrench

M23 connectors are easy to assemble due to their size. After the components are assembled, the top and bottom section must be secured to one another to guarantee the high degree of protection.

Description	Ordering code
	Part number
Assembly wrench for 12 and 19-pin M23 connectors	**FHW003F**
	RC-Z2099

Possible Wet/Oily Environment



In this scenario there is a connection between cordsets, with the final connection to a sensor. This scenario is characteristic of homerun cables, patch cables, and adapter cables. The connection between cordsets can sometimes lie in an unexpected, oily or wet environment at the bottom of a work cell. By using a combination of a new Balluff cordset with hexagonal coupling nut and a properly calibrated torque wrench, the sensor connection is IP67 guaranteed. By ratcheting when the connection is properly sealed, it does not allow over-torque, which can be just as bad as too little torque.

Connectivity Solutions
Control accessories for analog inputs

Balluff signal adapters are crucial for quick, versatile modifications, retrofits and enhancements of a sensor's functionality. Several available models provide quick change options that will convert PNP/NPN outputs, add delay timing and counting functions, or monitor frequency of machine speeds and motion. Applications with very high switching frequency can be slowed down using signal stretching devices or analog inputs can be converted to discrete setpoints without the use of a controller or logic. Sensor controller relay boxes are great for simple applications where a controller is overkill. All of these solutions are suitable as stand-alone solutions in areas lacking external controllers. They are also ideal for applications where a solution must be retrofit without changing the controller.

IP67 Inline - Analog Signal Discrete Setpoint Controller

Rated Operational Voltage	24 VDC
Rated Operational Current	300mA
Number of Discrete Outputs	3
Number of Analog Outputs	1
Hysteresis	500mV
Remote Teach	Yes

Input Type	Wiring	Order Code
0...10VDC	**PNP, N/O**	**BAE0070**
	NPN, N/O	**BAE006Z**

Analog Signal Digital Panel Display

Input Signal	0...10 VDC, 4...20 mA
Supply Voltage	24 VDC
Resolution	16-bit A/D
Analog Output	16-bit, 100% adjustable
Display	6-digit (5-digit analog out)

Discrete Outputs	Scalable Analog Outputs	Order Code
---	**---**	**BAE004R**
4x PNP	**---**	**BAE004T**
2x PNP	**2x**	**BAE004U**

IP20 DIN-rail mount - Signal Stretching Device

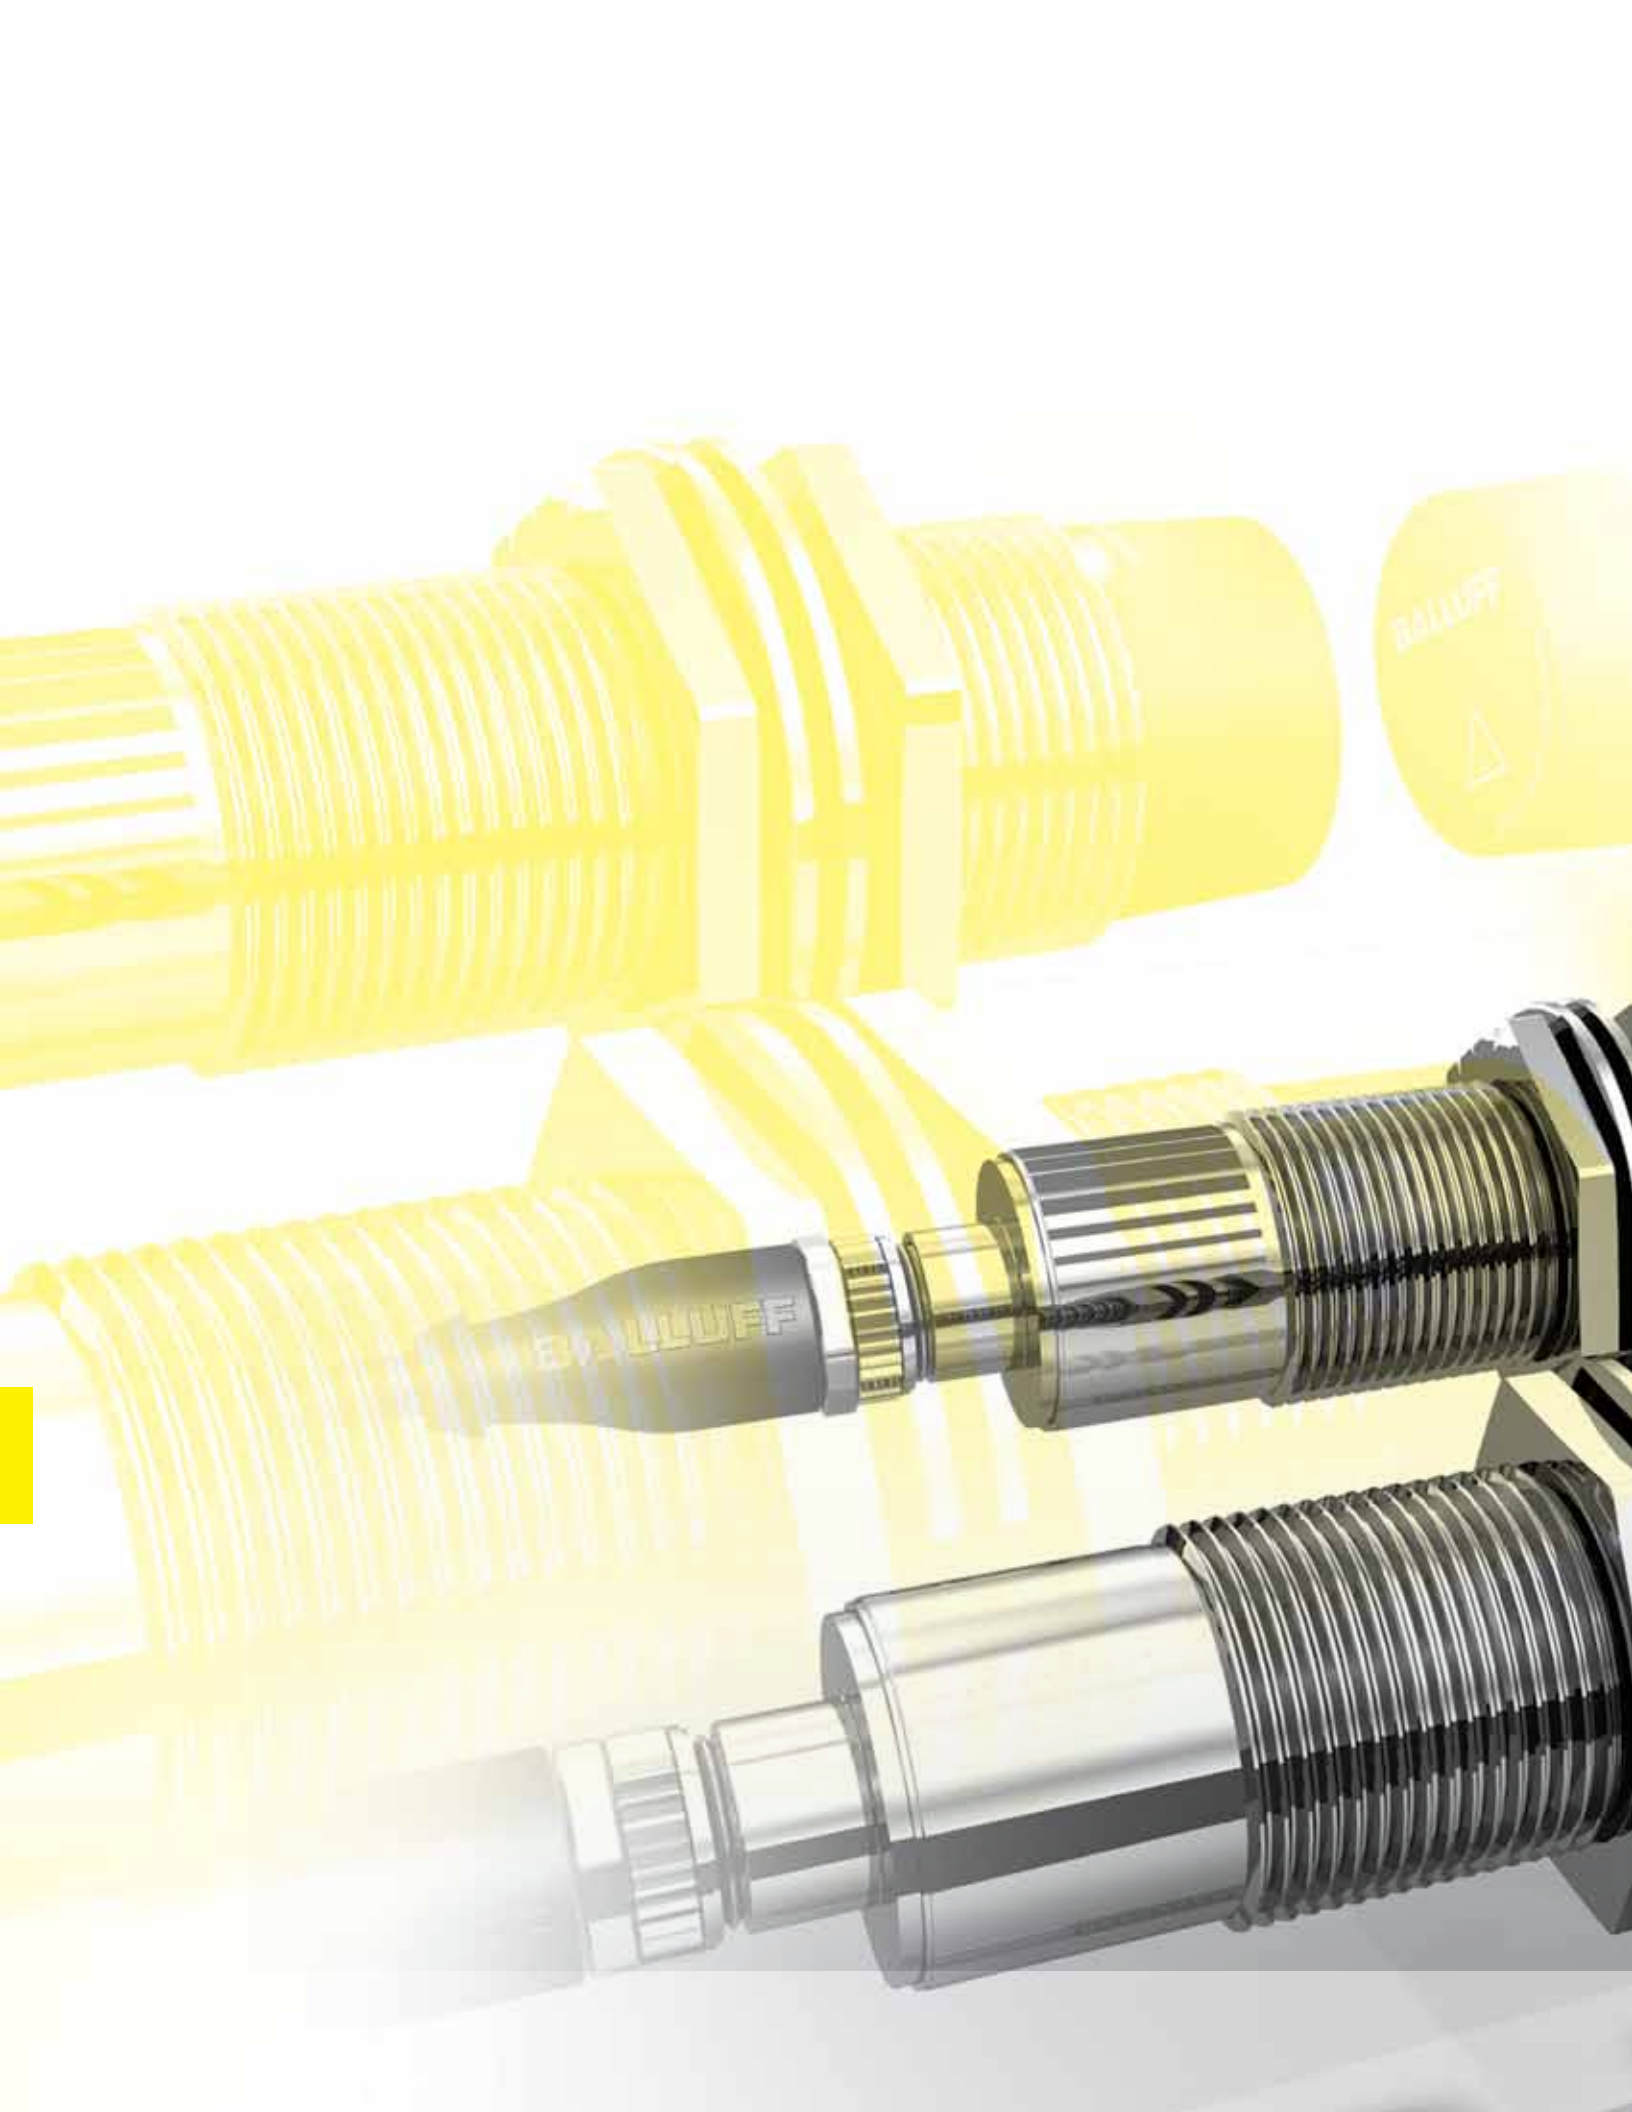
Rated Operational Voltage	10…30 VDC
Rated Operational Current	130 mA
Pulse Length Adjustable	2ms…1s
Minimum Input Pulse	1.5ms

Wiring	Order Code
PNP/NPN, Complementary	**BAE0073**

IP20 DIN-rail mount - Sensor Relay Controller

Supply Input Voltage	115 VAC, 60Hz
Sensor Output Voltage	24 VDC
Sensor Output Current Max	100mA DC
Number of Sensor Inputs & Relays	2
Relay Ratings	6A at 120 VAC or 24 VDC
Relay Life	100,000 Operations

Wiring	Order Code
PNP/NPN	**BAE0023**
PNP	**BAE0027**



BALLUFF

Non-Contact Connectors
Contents

Balluff non-contact connectors are extremely suitable for the quick connection and disconnection of modules. New requirements can be implemented within a very short period and with maximum flexibility.

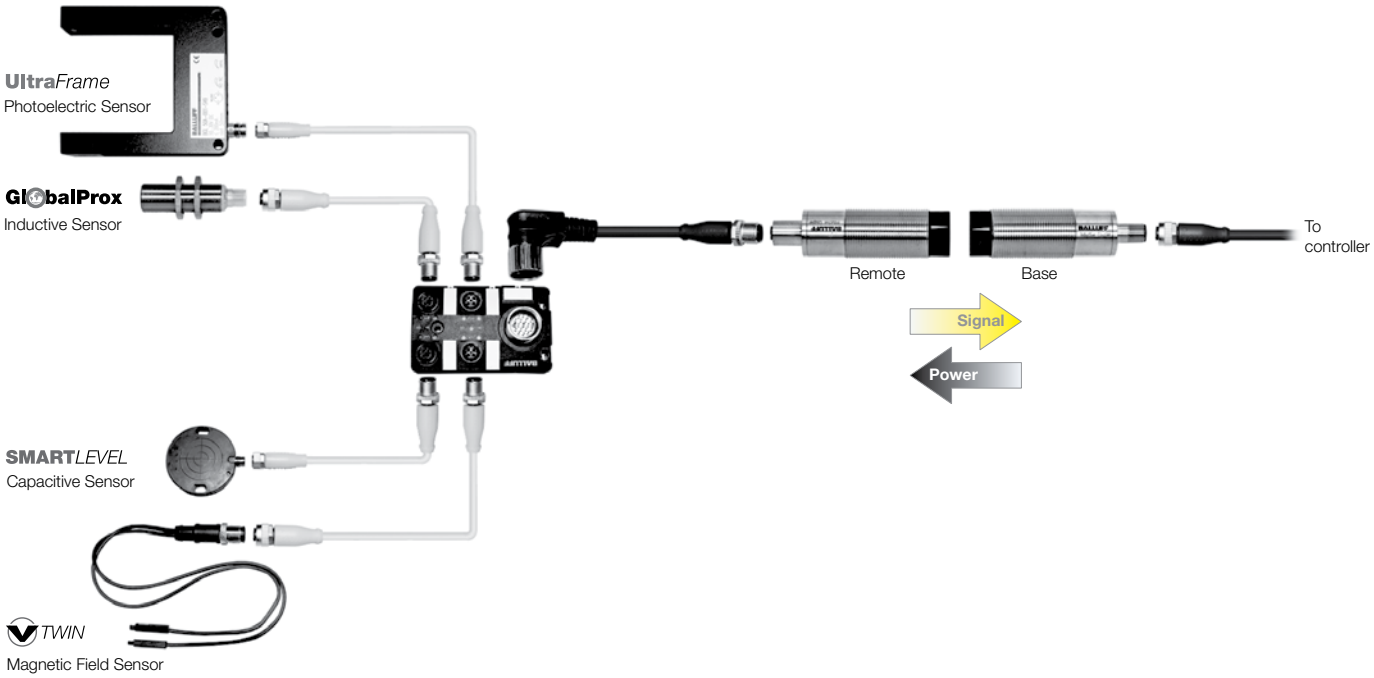
Non-contact connectors are installed via plug-and-play, making retrofitting extremely simple. Even maintenance is much easier. Cable breaks and mechanical wear are a thing of the past. Units are easy to disconnect, safe and powerful. Power and signals are transferred reliably over an air gap.

Non-Contact Connectors

Non-contact connectors technology overview

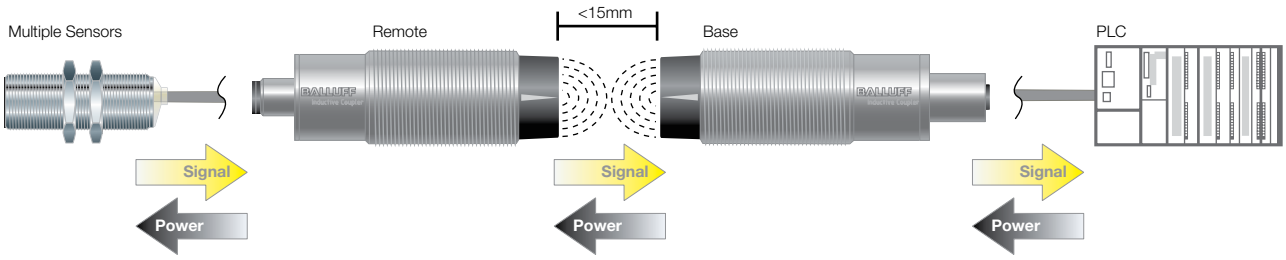
Reliable Connections for Your Hard-to-Solve Cable Applications

In machines and equipment, there are many instances where using a wired and cabled connection just doesn't work effectively. More and more, sensors and other feedback devices need to be mounted on a moving part and hardwired connections are not a viable option. Whether it is a rotating table, moving pallet, punches & presses, or a robot's end of arm tooling, connections need to be made. Balluff offers a tried and true non-contact connection solution for these hard to solve applications. By using these simple non-contact connectors in your application, the equipment can be more flexible and provide reliable sensor data across a difficult connection location.



How Non-Contact Connectors Work

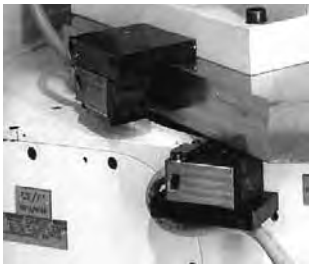
Think of this only as a mechanical connector without pins or the requirement of physical contact. When connected, power goes out to the devices and signals come back from the devices. Depending on the specific product of interest, different information can be passed. Power only, discrete inputs and outputs can be sent across the connectors as well as analog voltage inputs. Each base head is mounted on the controller side of the application and as many remote heads as needed are mounted on the sensors/actuators side of the application.



Inductive Coupling

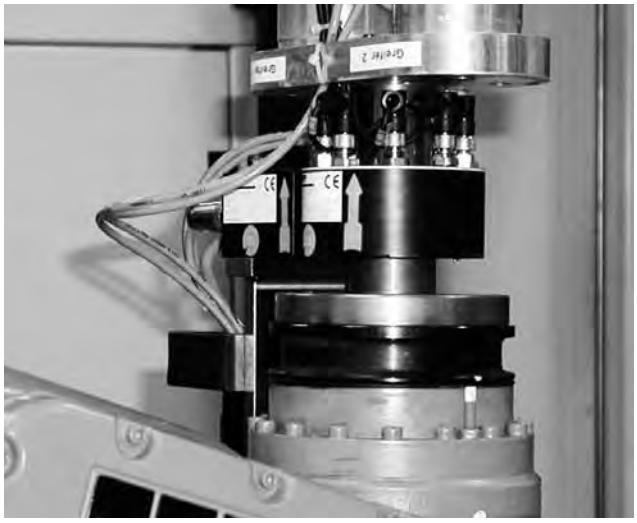
Non-Contact Connector Applications

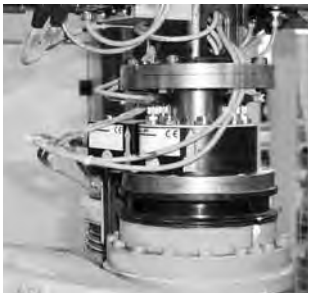
There are basically two ways to apply these connectors to your applications: axial movement connections and radial movement connections. In axial movement applications, the connector is mounted in a common location for all of the equipment so that when the two connectors move together they connect. This can be seen in pallet handling, robot end of arm tooling, and presses. In radial movement connections, the connector is mounted directly along the axis of rotation and the connection is constantly made throughout the rotation because the connector is along the axis. This can be seen in stirring, rotating tables, and some robot end-of-arm tooling applications.



Monitoring clamping jaws in the working area of a 2-spindle machining center

Clamping jaws can also be monitored during machining using non-contact connectors. Information from eight sensors on each of two rotary tables on the swing table is sent to the control. Power for the sensor function is also provided inductively. The separable inductive coupling of power and signals also guarantees greater flexibility in machining centers.





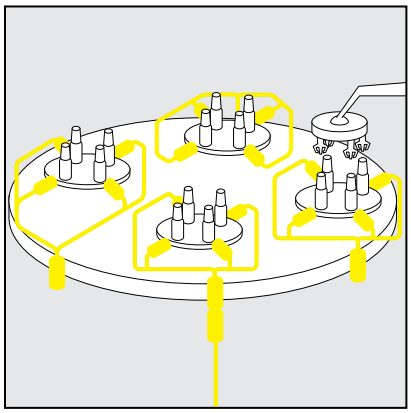
Robots are indispensable for the precision loading and unloading of parts in machining centers

The high movement speed of the gripper often leads to problems with the sensor cabling. Federal Mogul Friedberg GmbH has taken on the problem and installed a radial power remote system at the interface between the gripper and robot arm. The energy for powering the sensors and the position information is coupled inductively. This concept ensures reliable transmission, whether stationary or in motion.

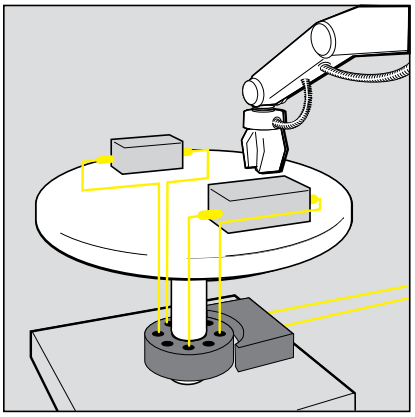
Slip Rings

Slip Ring Advantages:
- Cost effective with a low number of I/O signals

Slip Ring Disadvantages:
- Physical mechanical connection
- High costs of maintenance and repair
- High number of I/O becomes difficult



Rotating Work Table – Work Stations
In this solution to slip rings, each work station would have a base connector and each fixture would have a remote connector. This allows for 360° rotation. The one disadvantage to this solution is the sensors are not powered up when rotating the tooling.

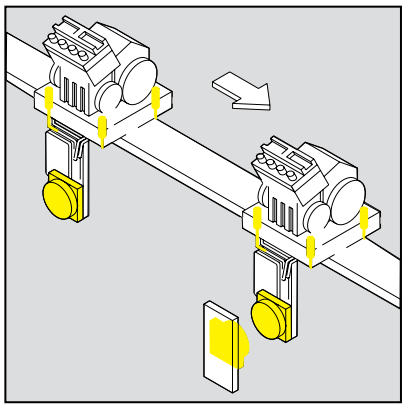


Rotating Work Table – Continuous Connections
The non-contact connector is positioned on the axis of rotation either axial (not pictured) or radial. This still allows for 360° rotation. This solution is most similar to the slip ring technology but sometimes the application does not allow mounting along the axis of rotation.

Pin and Plug Connectors

Pin and Plug Advantages:
- Lowest cost solution

Pin and Plug Disadvantages:
- Physical mechanical connection
- Mechanical pins are prone to damage from user interaction and repeated use
- Connectors are damaged when forgotten and not disconnected before change-out



Pallets or Changeable Tooling
Sensors are used to ensure components are present in the fixture or pallet before processes are performed. Many times connectors need to be made and disconnected regularly as pallets move down a process. With non-contact connectors the sensors are powered automatically as the pallet moves into position at the workstation and the signals are transmitted to the controller.

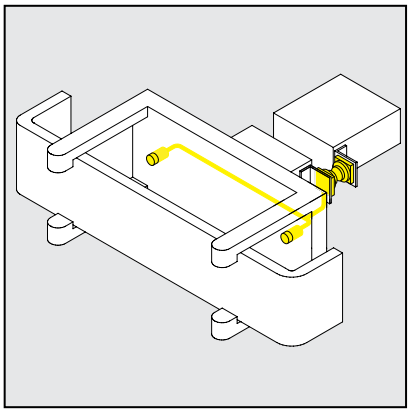
Robotic End Effector Quick Changers

Quick Changer Advantages:

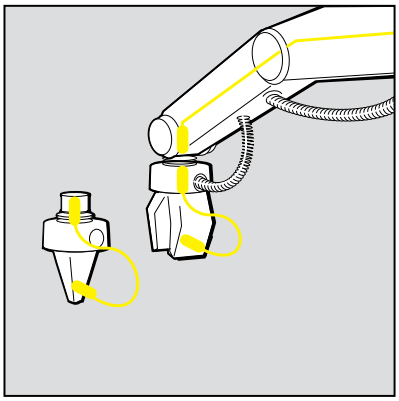
- Integrated pneumatic connections
- Can be complementary to Balluff non-contact connectors

Quick Changer Disadvantages:

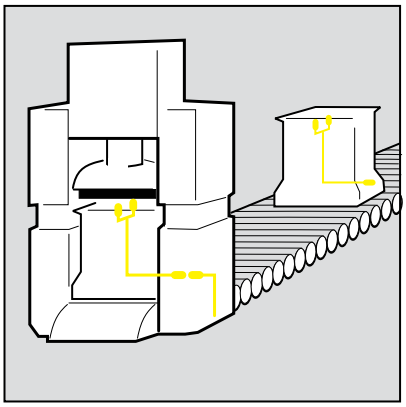
- Mechanical spring pin connectors wear with continuous change-out or can chatter in a signal
- Communication startup connection time can be slow



Changeable End Effectors
More and more one robot is used to perform multiple functions to increase its utilization. This is one of the most popular applications for non-contact connectors. Sensor data is transmitted from the tool back to the controller without having to make or break a physical connection and increases throughput of the robot.



360° Rotation End Effectors
When the end-effectors need to freely rotate on the end of the robot, the connection needs to be mounted on the axis of rotation either axial or radial (not pictured). Sometimes this application does not allow mounting along the axis of rotation on the axis but a radial version might still work.



Metalforming Die Changes
As die tools are more integrated with in-die sensors and automation, connections to the controller become important. If an operator forgets to disconnect the die from the controller the sensors and cables in the tool can be damaged when changing out the tooling.

Non-Contact Connectors
Family overview/selector

Movement	Number of Signals	Remote Voltage	Remote Current	Gap Distance	
Power Only					
Axial	0	24 VDC	200 mA	0…5 mm	
	0	24 VDC	500 mA	0…5 mm

	2 bytes (Q40)	24 VDC	500 mA	0...5 A	
	11 bytes (M30)	24 VDC	500 mA	0...5 A	

Power Only
Only power transmitting units
for actuators, load units or an energy supply.

Discrete Input Only
Means signal transmission in one direction. Two or three-wire sensors are connected depending on the version. The power is supplied by the remote sensor. 1, 4 or 8 digital signals are transmitted depending on the system. Special systems for analog signals or PT100 temperature sensors are also available.

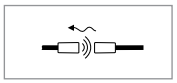
Discrete Input/Ouput
For the transmission of signals in two directions. Four sensors and four independent control signals are processed on the moving side. Power and signals are coupled inductively.



Analog Input Only
Special systems for the transmission of 1 or 4 analog inputs of the 0...10 VDC type.

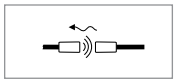
PT100 thermocouples



Remote sensor – non-contact transmission of temperature values
The thermal remote sensors are compatible with PT100 thermocouples for sensing temperature on moving components while they are being processed. The thermocouple detects the temperature of the object and changes its resistance value, which is processed by the transmitter. The digitized information is passed to the output sensor. The latter converts the digital values into an analog signal (4...20 mA) and transmits it to the external controller.

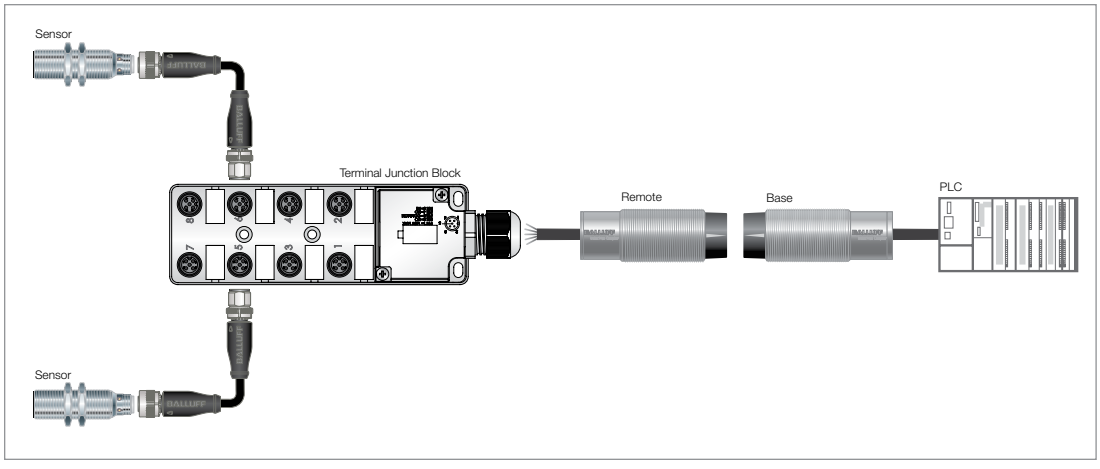
Power supply U_B incl. ripple			24 V DC ±5 %
Rated operating current I_e			≤ 200 mA
No-load supply current I_0 max.			≤ 150 mA
Output signal			4...20 mA
Connection type		5 m PUR cable	5 m PUR cable
No. of wires × cross-section		3×0.3 mm²	3×0.3 mm²

Mounting Brackets for Tubular Housings*	
M18 Plastic Mount	**BAM00F2**
	BES 18,0-BS-1
M30 Plastic Mount	**BAM00HN**
	BES 30,0-BS-1

*See sensor catalog for alternate mounting options

Terminal Junction Blocks for Cable Out Remote Side BICs*	
4x M12 ports, 8 signals, plastic	**BPI006H**
	BPI 4M4A50-2K-MC-HHFB
8x M12 ports, 8 signals, plastic	**BPI006K**
	BPI 8M4A40-2K-MC-HHFB

*For variations and details, see page 3.54



Double-Ended Cables for BICs and BPIs with Quick Disconnect Connectors

M12 Straight-M12 Straight, 12pole, 0.6m	**BCC088E**
	BCC M41C-M41C-3A-325-PX0C25-006
M12 Straight-M12 Straight, 12pole, 1m	**BCC088F**
	BCC M41C-M41C-3A-325-PX0C25-010
M12 Straight-M12 Straight, 12pole, 2m	**BCC088H**
	BCC M41C-M41C-3A-325-PX0C25-020

Single-Ended Cable for BICs with Quick Disconnect Connectors

M12 Female Straight, 12pole	**BCC M41C-0000-1A-049-_X_C25-_ _ _**
M12 Female Right Angle, 12pole	**BCC M42C-0000-1A-049-_X_C25-_ _ _**
M12 Male Straight, 12pole	**BCC M41C-0000-2A-049-_X_C25-_ _ _**
M12 Male Right Angle, 12pole	**BCC M42C-0000-2A-049-_X_C25-_ _ _**

Standard Cable Jackets:
V = PVC (grey, 8)
P = PUR (black, 0)

Standard Lengths Available:
020 = 2 meters
050 = 5 meters
100 = 100 meters

Cables for Radial BICs

M12, Female, 4wire, 5m	**BCC05FE**
	BCC M415-0000-1A-003-PX44T2-050
M12, Female, 8-wire, shielded, 5m	**BCC00YF**
	BKS-S115-PU-05
M16, Female, 3-wire, 5m	**BCC014K**
	BKS-S 96-PU-05
M16, Male, 12-wire, 5m	**BCC014M**

Power Supply
Contents

Industrial automation is becoming more demanding than ever, and the complexity of tasks is forever increasing. Efficient operation of equipment and machines demands reliable power sources. Balluff power supplies: the powerful solution for fault-free operation of your system.

Take advantage of the special benefits of Balluff power supplies:

– Full product line – choose just what you need
– Short circuit and overload protection in industrial environments
– High availability of all devices
– Unlimited, precise power for increased demands
– Long life for reliable operation
– Worldwide approvals for use anywhere

A Power Supply You Can Trust

Intelligent power supplies with HeartBeat technology give reliable feedback on the real time and long term status of the supply. Built with the roughest applications in mind, these power supplies provide many great advantages:

- Highly energy efficient (>93% efficiency)
- Electrically durable (power boost 150% for 4 seconds)
- Long lasting (minimum service life of 15 years)
- Vibration and shock resistant
- IP67 - Outside the cabinet rated

HEARTBEAT™

Load level
Reversible in short term

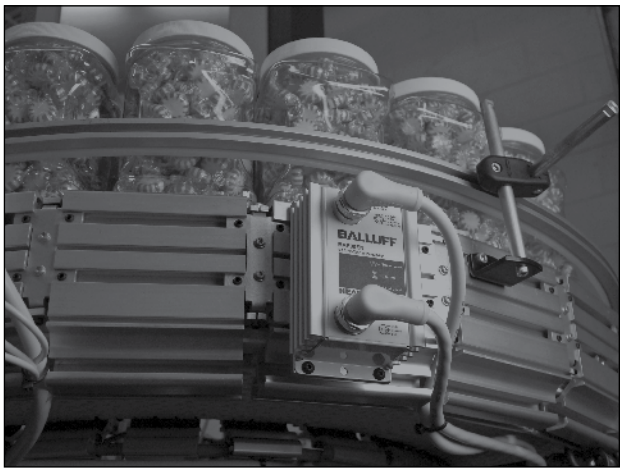
Load level indicates the current load on the device. The display indicates the load without delay.

Stress level
Reversible in medium term

Stress level indicates the physical and thermal loads. A change in the load status delays the "pulse" of the device slightly.

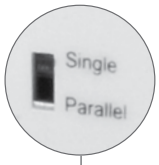
Lifetime
Irreversible in long term

Lifetime indicates the remaining useful life of the device and is based on the combination of all loads.



Network Auxiliary Power
This fully potted power supply can be installed virtually anywhere in an industrial manufacturing environment and provide efficient and reliable power. Easy to see indicators communicate the status of the power supply for simple preventative maintenance plan. With greater than 93% efficiency you can improve plant performance and decrease waste power consumption.

Power Supply
Reliable control power



Parallel/Single mode
When more power is needed, multiple units can be connected in parallel mode (most models)

Ready output
Informs control system that power supply is operational (most models)

Adjustable output
Adjust voltage output to compensate for losses in wiring and distributed components

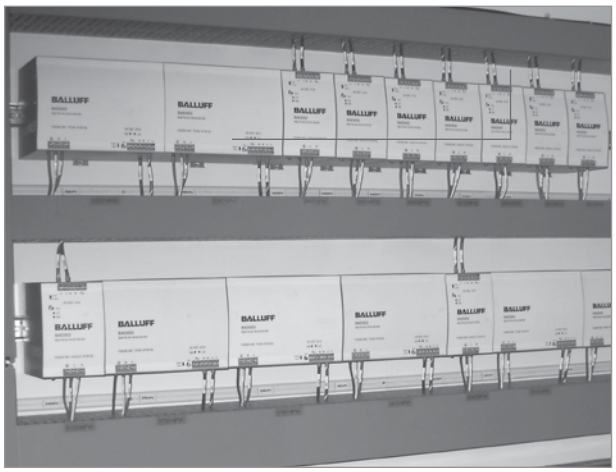
Rugged DIN rail mount

CE, UL/cUL, & TUV approvals

Status indication
LED for DC power ON and DC power LO indication (most models)

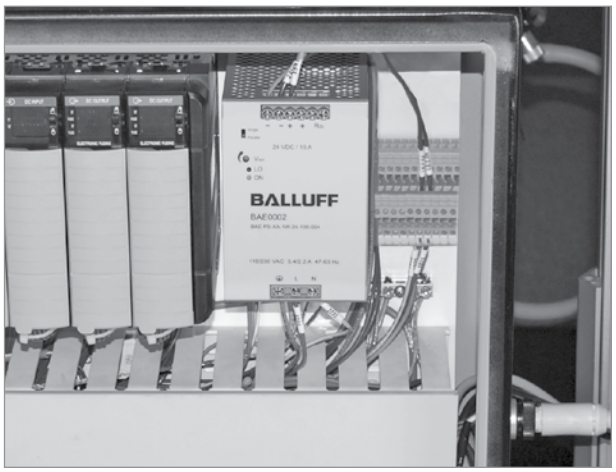
IP20-rated metal housing (most models)

Finger-safe terminals
No additional guarding is necessary



Control and Network Power
These power supplies were designed by Balluff with control products in mind, so you can be sure they will integrate perfectly with your control suite.

The PS Series of ultra reliable power supplies come in a wide range of 24 V DC models with single or 3-phase inputs. With current ranges from 0.75 A (18 W) to 40 A (960 W), there is a size for most applications. But if more power is needed, connect multiple power supplies together (parallel mode) for additive current capacity.



Seamless Installation
Reliable power has never been this easy to install. It starts with convenient DIN mounting with Balluff's heavy-duty, built-in mounting system. Screw terminals are oriented to allow AC power to enter from the bottom and DC power to exit from the top. Finger-safe terminals require no additional guarding.

While connectivity products are not the most technical product in the Balluff offering, there is useful information to have on hand. This section is not meant to be comprehensive, but to provide useful reference information and drawings. Most Balluff products come with some variety of manual or user's guide to help answer many of the more detailed questions you may have. Please contact Balluff's technical support group if you are having trouble finding the information you are looking for.

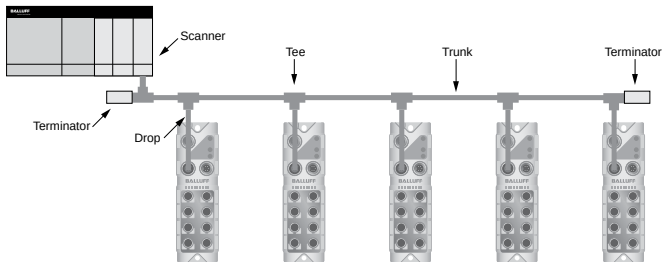
DeviceNet network design quick tips

Basic Building Blocks

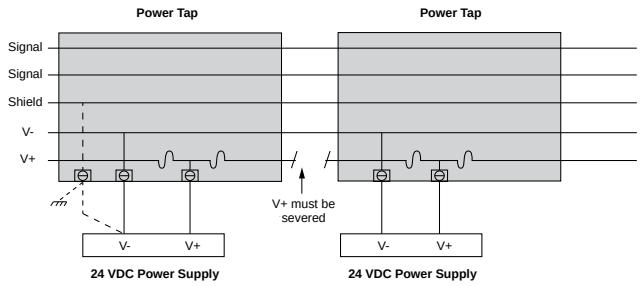
- Cables
  - Truck (usually thick media)
  - Drop (usually thin media)
- Connectors
  - Tee (7/8“ or M12)
  - Terminators: 121 Ohm, 1/4 watt resistors
- 24 V Class II Power Supplies, one ground
- DeviceNet Scanner Card in PLC



Information about Nodes

- 64 total nodes on a network
- Node 0: Typically scanner module on PLC
- Node 63: Typically for "new devices" default

Adding Power to the Network

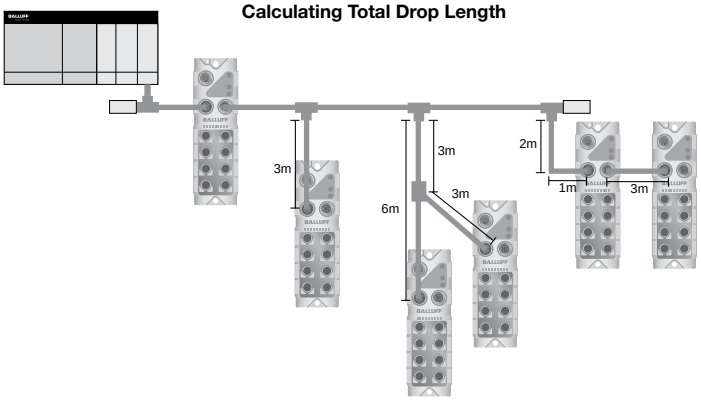


Limitations on Network Size

- Baud rates
- Cable type
- Cable length
- Total drop length 6 m from trunk to device

Cable Type/Speed	125 kbs	250 kbs	500 kbs
Thick	500 m	250 m	100 m
Mid	300 m	250 m	100 m
Thin	100 m	100 m	100 m
Max total drop length	156 m	78 m	39 m

Calculating Total Drop Length



Additional Notes and References

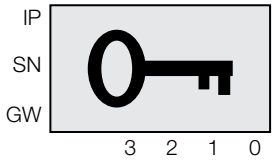
- DeviceNet is a category 2 network and you will need to adhere to the following spacing guidelines from publication 1770-4.1 (Industrial Automation Wiring and Grounding Guidelines)
- ODVA DeviceNet webpage: www.odva.org/default.aspx?tabid=66
- Balluff DeviceNet webpage: www.balluff.com/devicenet

EtherNet/IP Display User Defined Features

User Defined LEDs
With green and red LEDs, the display of the block can be used to visually indicate errors or provide maintenance troubleshooting assistance.

PING
When using the tried and true method of pinging an IP address, the Balluff block will display "PING" to distinguish itself as the target block.

Push Button Lockout
Using the controller as the interface, the push buttons can be locked out for tamper proofing.



EtherNet/IP Grounding Considerations

European Method
In a standard European grounding situation, use a common point grounding method where all devices are tied to a single grounding point as shown in figure 1. This insures all devices stay at the same ground potential. Use supplied ground strap when mounting on painted surface.

If a single-point ground system is not implemented, there is a possibility of varying earth ground potentials. If this happens, it will cause current to flow through the shield in the Ethernet network cable. This can induce excessive noise into the network cable causing communication interruption. There are two possible solutions to this issue shown in the figures below.

North American Method
In most North American grounding situations, each local machine is tied to its own grounding when using fully shielded cables. This situation is addressed in the ODVA publication PUB00148RO, "EtherNet/IP Media Planning and Installation Manual".

ODVA recommends the shield be connected to the ground at the switch and not connected at the network device. This setup is illustrated in figure 2.

Shield break plugs can be found in the accessory tables for EtherNet/IP networks in section 1.

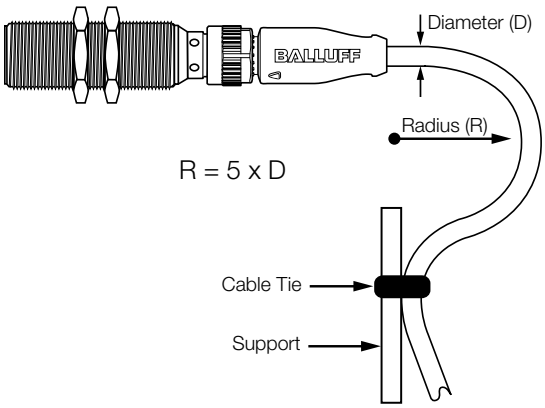
Mounting Suggestions for Cables on Sensors

To obtain the maximum cable life from a cable-out sensor, the following mounting guidelines should be followed. These guidelines apply to all types of cable jackets supplied. The bend radius values shown apply to all cable-out sensors and all pigtail (cable with moulded connector) sensors with potted in cables.

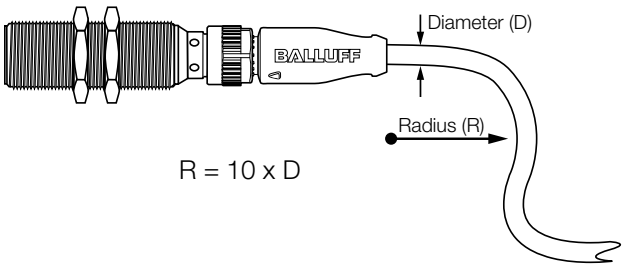
Fixed Installation

The minimum bend radius should be 5 times the cable diameter.



Flexing Installation

The minimum bend radius should be 10 times the cable diameter.



NOTE: Even when the minimum bend radius is observed, unintentional stress can be placed on the rear of the connector body at the cable exit. Proper cable loops should be maintained to prevent unnecessary stress to this area.

Tightening torques

For permissible tightening torque, see data sheets or sensor packaging.

Removal clearance

The removal clearance refers to the necessary clearance which must be allowed for when removing the connector without difficulty. It results from the connector height “y” plus a space “s”, which is determined mainly by the spatial conditions.

Gasoline	P	E	E
Benzol	P - F	E	E
Degreaser Solvents	P - F	E	E
Alcohol	G - E	E	E
Weld Slag	F	E	E

KEY:
P = Poor
F = Fair
G = Good
E = Excellent
O = Outstanding

Note: These relative ratings are based on average performance. Special selective compounding of the jacket can improve the performance.

NFPA 79 2007 Standard (12.2.7.3)

"Single conductor or multi-conductor Type AWM shall not be permitted."

Exact Text (page 79-34 of 2007 Edition)

12.2.7.3* Appliance Wiring Material. Single conductor or multi-conductor Type AWM shall not be permitted.

Exception: When part of a listed assembly suitable for the intended application, Type AWM shall be permissible.

Clarification of the Exception

To summarize from above; Recognized wire types are not permitted but Listed wire types are permitted. This exception states that AWM cable cannot be used unless:

A. The raw AWM rated cable is used as a component in another assembly that is UL Listed. An example of this would be an overmolded cordset that is UL listed.

or

B. It conforms to a specific list of UL listed raw cable types. These can be found in the table below taken from chapter 12 of the NFPA 79 document.

MTW	THWN	RHW-2	THHN	RHH
SJOW	SEOW	SJEOW	STOW	MI
TC PLTC	ITC	CM	CL2	
XHHW	THW	RHW	XHHW-2	SOOW

How do I find the UL information on the raw cable?

Information on the raw cable is usually printed on the cable jacket or can be found on the raw cable datasheet. For example, the raw cable used in a Balluff C04 AEL-00-VY-050M spells out the below information:

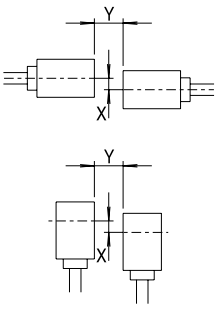
4/C 22AWG E41663 ЯU AWM2661 105°C 300V LL33361 CSA AWM I/II A/B 80°C 300V FT1

The "E41663 ЯU AWM2661" part of this number helps us find the detailed UL information by then using the UL website's certification search engine.

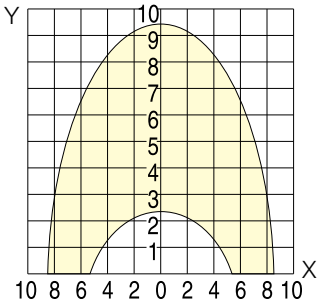
http://database.ul.com/cgi-bin/XYV/template/LIGenderT/1FRAME/index.html

Transmission Effects

- Distance of separation can affect the current capacity and operational functionality of the device. This range is demonstrated in the Y-axis of the diagrams on the right.
- Shift or offset can also affect the current capacity and operational functionality of the device. This distance is demonstrated in the X-axis of the diagrams on the right.
- Consult the device manual for exact X-axis and Y-axis values.

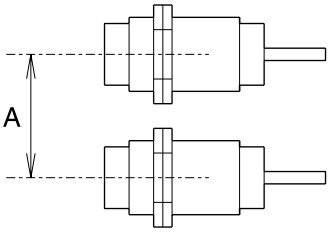


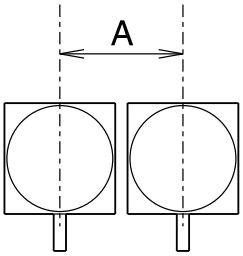
X: Center off-set
Y: Transmitting distance



Mutual Interference

- Every non-contact connector requires a certain space between each base and/or remote mounted in parallel. This distance is represented in the A distance in the diagrams on the right as a minimum distance.
- Consult the device manual for exact A values.





Mounting in Metal

- To avoid the influence of surrounding metal when the sensor is mounted in metal, there is a required clearance.
- Distance between the face fo the connector and the back metal is represented by distance C.
- Distance between the side of the connector and metal is represented by distance B.
- Consult the device manual for exact B and C values.

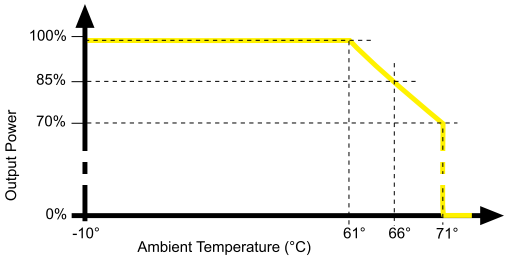
Temperature Derating

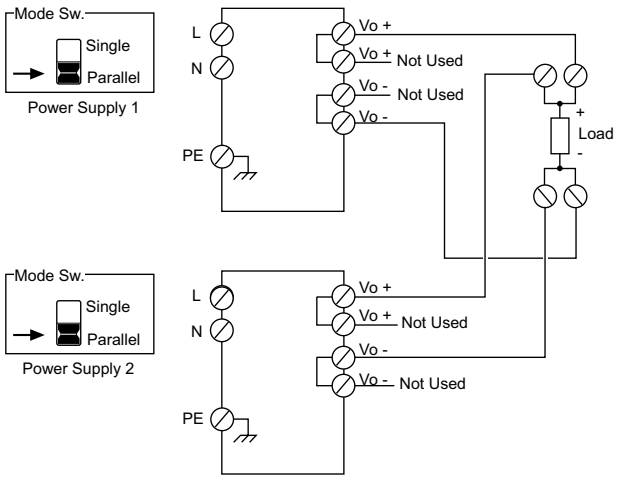


LED Definition

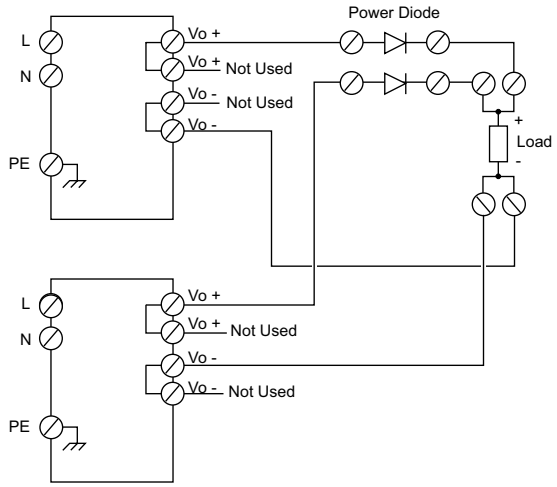
DC ON	DC LO	Possible Situation
off	off	AC power off, internal fuse blown, short circuit
on	off	Normal Operation
off	on	Output voltage < 19.2V
on	on	Power Supply Fault

Parallel Mode Wiring**

BAE0002, BAE0003 BAE0006, BAE0008, BAE0009, BAE003J



BAE0001, BAE0004, BAE0005, BAE0007, BAE000A



**Note: When wiring power supplies in parallel, it is recommended that the wire lengths be equal for all DC connections to the load.

HEARTBEAT™

Load level
Reversible in short term

Load level indicates the current load on the device. The display indicates the load without delay.

LED Definitions
Green: 0-80% load
Yellow: 81-100 load
Red (IP20 output): 101-150% load

Causes of Status Change
- Leakage current
- Additional devices installed
- Short circuit

Stress level
Reversible in medium term

Stress level indicates the physical and thermal loads. A change in the load status delays the "pulse" of the device slightly.

LED Definitions
Green: OK, long life expected
Yellow: Temperature and load levels high
Increased aging speed
Red (IP20 output): Lifetime is dramatically reduced

Causes of Status Change
- Raised environment temperature
- Poor input power quality
- High load level

Lifetime
Irreversible in long term

Lifetime indicates the remaining useful life of the device and is based on the combination of all loads.

LED Definitions
Green: Long lifetime
Yellow: Replacement in next maintenace cycle
Red (IP20 output): Replace immediately

Causes of Status Change
- Aging of the power supply
- Long term stress level

Rugged Control Components from Network to Sensor

Balluff specializes in delivering dependable, rugged products for industrial sensing, networking, and ID to help prevent downtime and eliminate errors. We are your complete system and component supplier, offering industrial network and I/O products for use outside of the control cabinet. We add value to automated systems by providing a wide range of enabling technologies that unlock hidden productivity potential.

Our products include a complete line of sensors, transducers, ID systems, and connectivity products. Our sensor lines include photoelectric, inductive, capacitive and magnetic, as well as other more specialized sensor products to fit virtually any sensing application.

Connectivity and Identification

Networking and Connectivity

Industrial Network Block I/O
EtherNet/IP, DeviceNet, Profinet, Profibus, CC-Link
Distributed Modular I/O with IO-Link
Cables, Cordsets & Connectors

Passive Connectivity
Sensor Cables & Cordsets
Junction Blocks & Splitters
Non-Contact Connectors

Industrial Identification

Industrial RFID
Machine Tool ID
Pallet Tracking
Part Tracing
Assembly Track and Trace
Asset Tracking
Logistics Tracking

Machine Vision
1D, 2D Barcodes & OCV
Multi-Tool Inspection
Advanced Inspection

Sensors and Solutions

Object Detection

Technologies
Inductive Proximity & Capacitive Sensors
Mechanical Single & Multiple Position Switches
Magnetic Field Cylinder Sensors
Photoelectric & Ultrasonic Sensors
Robot Zone Limit Systems

Specialty Lines
GlobalProx
UltraFrame
SmartLevel
EdgeMaster
SmartLevel
SuperShorty
V-Twin
StrokeMaster
SlagMaster
SteelFace
Factor1

Linear Position and Measurement

Micropulse Linear Transducers
Profile-Style Transducers
Rod-Style Transducers
Explosion-Proof Transducers
Network Interfaces
Magnetic Linear Encoders

Analog Distance Sensors
Inductive Sensors
Capacitive Sensors
Magneto-Inductive Sensors
Photoelectric Sensors
Laser Sensors

Fluid Detection

Technologies
Pressure Sensors
Capacitive Sensors
Fluid Level Sensors

Accessories

Mechanical Accessories
Holders, Protection & Fastening Systems

Power Supplies
IP67 Industrial Power Supplies
IP20 DIN Rail Power Supplies
