Nokia 7210 SAS

Release 23

The Nokia 7210 SAS product family provides service providers with IP routing and Carrier Ethernet demarcation, access, and aggregation for mobile backhaul, business, and residential service delivery. For enterprise and mission-critical network operators, the 7210 SAS addresses stringent requirements for high network resiliency, deterministic network performance, and scalability.

UAs a member of the Service Router (SR) product portfolio, the 7210 SAS leverages the proven Nokia Service Router Operating System (SR OS) and the Nokia Network Services Platform (NSP) for service and operational consistency across the network. The 7210 SAS is compliant with the Metro Ethernet Forum (MEF) Carrier Ethernet (CE) 3.0 specification, and with Hierarchical Quality of Service (H-QoS) and comprehensive operation, administration, and maintenance (OAM). The 7210 SAS provides deployment flexibility, service richness, and operational simplicity to extend IP/MPLS and Carrier Ethernet services throughout the network.

Benefits

Support for differentiated services

Service providers want to unlock new revenue streams. Enterprise and mission-critical network operators need to fulfil the specific requirements of each of their various applications. To meet these needs, the 7210 SAS offers differentiated services, including Carrier Ethernet, IP VPN, and enhanced internet services coupled with per-service QoS, and bandwidth guarantees. Service providers can create tiered service models with flexible billing options, tailoring service packages based on the performance and availability requirements of their customers. network operators can provide customized QoS and traffic profiles to assure the delivery of individual applications and essential business communications.

Customer satisfaction and application delivery assurance

The plug-and-play capabilities of the 7210 SAS along with the NSP deliver rapid service turn-up without truck rolls, expediting in-service deadlines and time-to-revenue while minimizing the chance of operator error. The ability to continuously monitor and measure traffic from end to end and troubleshoot proactively enables network problems to be found and resolved before they affect end users.

Monitoring, performance measurement of service metrics, prediction of threshold violations, reporting of test results and accurate billing provide a superior level of service to end users. These features also increase the reliability of mission-critical applications.

For service providers, self-service customer portals with customized on-demand management capabilities improve the overall quality of experience for their customers.

Cost reduction through operational simplicity

Cost savings can be realized by transitioning from separate legacy networks onto a single platform where multiple services are converged onto one uplink and each application can be supported by a full range of Carrier Ethernet and IP/MPLS services. With a variety of compact form factors and features, the 7210 SAS cost effectively scales to support current and future customer and application requirements. It provides savings through advanced QoS, end-to-end OAM, optical integration, streamlined network upgrades, reduced training, testing cycles and operations support system (OSS) integration costs.

Software features

Each product model supports, but is not limited to, a variation of the following features. Please refer to 7210 SAS technical documentation for the features supported on each product model.

Services

- Layer-2 virtual private network (VPN) services – virtual leased line (VLL) and virtual private LAN service (VPLS)
- IP VPN services (IPv4 and IPv6)
- Ethernet VPN (EVPN)
  - VPLS
  - Multi-homing with single active and all-active options.
- Internet Enhanced Service (IPv4 and IPv6)
- Routed VPLS with IES and virtual private routed network (VPRN) IPv4 and IPv6 interfaces
- IPv4 multicast
- IPv4 VPN multicast (Next-generation multicast VPN)

Network protocols

- IEEE 802.1Q (VLAN) and 802.1ad (QinQ)
- Provider Backbone Bridging (PBB), Backbone Edge Bridge (BEB) and Backbone Core Bridge (BCB) as defined in IEEE 802.1ah
- Segment routing
  - Intermediate System-to-Intermediate System (IS-IS) and Open Shortest Path First (OSPF)
  - Loop-free alternate (LFA) and remote LFA (RLFA)
- Path Computation Element Protocol (PCEP)
  - Resource Reservation Protocol (RSVP)

- MPLS Label Edge Router (LER) and LSR.
  - MPLS point to multi-point (P2MP) LSPs for NG-MVPN multicast.
  - MPLS-TP (based on IETF standards)
  - Label Distribution Protocol (LDP), LDPv6, LDP over RSVP, and Targeted LDP (T-LDP)
  - Resource Reservation Protocol — Traffic Engineering (RSVP-TE)
- IP routing
  - Intermediate System-to-Intermediate System (IS-IS) (IPv4 and IPv6), including traffic engineering (TE) support for IPv4
  - Open Shortest Path First (OSPFv2 and OSPFv3) with TE support for IPv4
  - IPv4 unnumbered with MPLS
  - Routing Information Protocol (RIP)
  - Border Gateway Protocol (BGP)
  - BGP label unicast routes as defined in RFC 3107 with next-hop-self and Accumulated Interior Gateway Protocol (AIGP) support.
  - BGP-AD for VPLS auto-discovery
  - BGP pseudowire routing for multi-segment pseudowires
  - BGP route-reflector server for VPRN IPv4 and IPv6 routes
  - BGP intra-AS option B for VPRN IPv4 and IPv6 routes
- Protocol Independent Multicast (PIM) – Sparse mode (SM), Source Specific Multicast (SSM) and IGMPv1/2/3
- IGMPv1/2/3 snooping

Load balancing and resiliency

- IEEE 802.3.ad Link Aggregation Group (LAG) and multi-chassis (MC) LAG
- Pseudowire redundancy
- Primary and Secondary LSPs
- Control plane redundancy

- BGP Prefix Independent Convergence (PIC)
- Fast reroute (FRR)
  - LDP with loop-free alternate (LFA) policies
  - RSVP
  - Segment routing with LFA and RLFA
- Equal-cost multi-path (ECMP) load balancing for LDP LSR/LER, IPv4 and L3 VPN tunnels
- Virtual Router Redundancy Protocol and VRRPv3 for IPv6
- Multi-chassis ITU-T G.8032v2
- IEEE Spanning Tree Protocol (STP)/Rapid Spanning Tree Protocol (RSTP)/Multiple Spanning Tree Protocol (MSTP)
- Hardware-based bidirectional forwarding detection (BFD) along with micro-BFD support for LAG with 10ms timer (IPV4 and IPv6)
- Shared Risk Link Group (SRLG) recovery
- Entropy (pseudowire hash) label
- Virtual chassis (stacking)
- Nonstop routing, nonstop services
- In-service software upgrade (ISSU)

Quality of service

- Service ingress packet classification based on MAC and IP criteria (IPv4 and IPv6), MPLS EXP on network ingress
- Service ingress packet classification based on IP DSCP and Dot1p with a large meter pool for higher SAP/service scaling
- Service egress reclassification based on IP DSCP, IP precedence, Dot1p
- Hierarchical per-service ingress and egress policing, queuing, and shaping
- Deep buffering
- RED slope
- Self-generated traffic marking
- Ethernet bandwidth notification (ETH-BN) for transport over microwave links

OAM

- IEEE 802.3ah Ethernet in the first mile with Dying Gasp support
- IEEE 802.1ag Ethernet OAM and ITU-T Y.1731 for fault and performance management
- MPLS OAM for in-service performance management (delay, jitter, and packet loss) and fault management
- MPLS-TP OAM
- Service mirroring (local/remote)
- Two-Way Active Measurement Protocol (TWAMP), TWAMP light
- ITU-T Y.1564 test head with multiple streams (with EMIX/IMIX frame-size) and service performance measurement
- Per-port and per-service loopback with MAC-swap
- Link Layer Discovery Protocol (LLDP)
- LLDP Media Endpoint Discovery (MED)
- NETCONF/YANG
- cflowd
- SNMPv1, v2c, v3
- IPv6 for management
- Ethernet and IP tools for performance monitoring with MEF 35-based binning and availability
- PTP-based timestamps for service level agreement measurements
- Remote SR OS upgrade
- Auto-configuration (plug-and-play)
- Configuration roll-back

Security

- Secure Shell (SSH) v4 and v6 for management
- SSH with public key infrastructure (PKI)
- IEEE 802.1x on access ports, MAC and VLAN authentication.
- Control plane security
- Management access filters
- Remote Authentication Dial-In User Service (RADIUS) client
- Terminal Access Concentrator Access Control Server Plus (TACACS+)
- User profile management
- VPLS security
- Access control lists
- Per-port MAC security (MACsec)
- Strict unicast Reverse Path Forwarding (uRPF)

Hardware overview

Table 1. Chassis models

The 7210 SAS-R6 router provides up to 100GE line-rate throughput per module slot with 960 Gb/s of system capacity. It has redundant control planes and features non-stop routing and services along with in-service software upgradability.

	7210 SAS-R6
System throughput Full duplex per Control Processing Module (CPM) card (fully redundant), IMIX traffic	480 Gb/s
Network transport	IP/MPLS/Ethernet
Integrated Media Module (IMM) slots	6 (see Table 2 for IMM options)

Timing and synchronization	• ITU-T SyncE with ESMC
	• IEEE 1588v2
	  – BC, OC-slave
	  – UDP/IP and Ethernet encapsulation
	  – Profiles: IEEE 1588v2 default, ITU-T G.8265.1 and G.8275.1[1]
	• 1 x BITS; 1PPS out, 10 MHz out

Extended buffering and shaping (on IMM-b cards)	Egress 192 MB buffer
Optical 1830 Versatile WDM Module (VWM) Passive filter management support	Yes (using the OMC interface)
Optical Management Connection (OMC)	Yes
Control plane and system redundancy	Yes, with nonstop routing and nonstop services
Hot-swappable modules	• SF/CPM, IMM • Power supplies, fan tray, fan filter
Dimensions	• Height: 13.3 cm (5.25 in) 3RU • Width: 36.8 cm (14.5 in) • Depth: 24.0 cm (9.45 in)
Power supply options	• Two feeds. Modular DC power supplies • AC power requires an external rectifier
Power requirements	DC input: -40 V DC to -72 V DC
Cooling	• Fan cooled with right to left air flow • Hot-swappable fan tray
Temperature operating range	0°C to 50°C (32°F to 122°F)

Table 2. Nokia 7210 SAS-R6 Integrated Media Modules (IMMs)[1]

7210 SAS-R line cards support both high-throughput up to 100GE and high 100/1000 Mb/s port density. IMM-c cards have 5 MB of buffer space; IMM-b cards have 192 MB for excellent buffering of bursty customer traffic.

Card name	Interfaces	Throughput per slot (full duplex IMIX, non-redundant)
1-port QSFP28 100GE IMM-c[1]	1 x QSFP28	Up to 100 Gb/s
4-port 10GE IMM-b	4 x SFP+ 10GE	Up to 26 Gb/s
2-port 10GE IMM-b	2 x SFP+ 10GE	Up to 20 Gb/s
11/22-port GE IMM-b	• 11 x SFP 100/1000 Mb/s • 22 x cSFP 100/1000 Mb/s (mix of optical SFPs and cSFPs is supported, limited to 11 ports when using copper SFPs)	Up to 22 Gb/s
16-port GE IMM-b	16 x RJ.5 10/100/1000 Mb/s	Up to 16 Gb/s
1-port 10GE, 10-port GE IMM-b	• 1 x SFP+ 10GE • 10 x SFP 100/1000 Mb/s	Up to 20 Gb/s

Table 3. 7210 SAS-Mxp

The 7210 SAS-Mxp is a multi-purpose access and aggregation router. The SAS-Mxp provides deep buffering and enhanced service scale.

	7210 SAS-Mxp (3 variants: normal, extended temperature range (ETR), and conformal coated -48 V DC ETR)
System throughput Full duplex IMIX traffic	64 Gb/s wire speed
Network transport	IP/MPLS/segment routing/Ethernet
Interfaces (excluding modules)	• 4 x SFP+ 10GE • 22 x SFP 100/1000 Mb/s • 2 x Combo SFP or RJ.5 100/1000 Mb/s

Timing and synchronization	• ITU-T SyncE with ESMC
	• IEEE 1588v2
	  – BC, OC-slave
	  – UDP/IP and Ethernet encapsulation
	  – Profiles: IEEE 1588v2 default, ITU-T G.8265.1 and G.8275.1
	• 2 x BITS, 1PPS out, 10 MHz out

POE/PoE+	ETR variant: 2 ports with 60 W of power maximum
Extended buffering and shaping	Egress 192 MB buffer
Optical 1830 VWM Passive filter management support	Yes (using the OMC port)
Optical Management Connection (OMC)	Yes
Dimensions	• Height: 6.7 cm (2.64 in) 1.5RU • Width: 43.6 cm (17.17 in) • Depth: 25.3 cm (9.96 in)
Power supply options	• Two feeds. Modular AC and DC power supplies • Supports concurrent use of AC and DC power supplies • Conformal coated ETR variant uses -48 V DC power on both feeds
Power requirements	• AC input: 100 V to 240 V, 50 Hz to 60 Hz; (ETR and non-ETR rated variants available) • DC input: -36 V DC to -72 V DC; (ETR and non-ETR rated variants available) • DC input: +20 V DC to +28 V DC; (ETR rated) • ETR variant requires a 200 W power supply
Cooling	• Fan cooled with right-to-left air flow • Hot-swappable fan tray
Temperature operating range	• Normal: 0°C to 50°C (32°F to 122°F) • ETR: -40°C to 65°C (-40°F to 149°F)

Table 4. SAS-S series models

The 7210 SAS-S series IP/MPLS platforms may be used in standalone mode to function the same as other 7210 SAS models. Alternatively, they can be used in satellite mode as port extenders for the 7750 Service Router, 7450 ESS and 7950 Extensible Routing System (XRS) series products. For more information on their satellite capabilities, please see the Nokia 7210 SAS-S series satellite datasheet.

The 7210 SAS Sx 1/10 GE model is similar to the 7210 SAS S but it is fully NEBS compliant with side-to-back airflow. It has two modular power supplies, supporting DC and AC at the same time, and has additional timing capabilities.

The 7210 Sx/S 1/10GE models use stacking ports to provide a virtual chassis capability. This provides a cost-effective solution for modular growth and redundant control.

About Nokia

At Nokia, we create technology that helps the world act together.

As a B2B technology innovation leader, we are pioneering networks that sense, think and act by leveraging our work across mobile, fixed and cloud networks. In addition, we create value with intellectual property and long-term research, led by the award-winning Nokia Bell Labs.

Service providers, enterprises and partners worldwide trust Nokia to deliver secure, reliable and sustainable networks today – and work with us to create the digital services and applications of the future.
