AQW PEST REPORT No. 19-2021

To: All County Agricultural Commissioners

Date: July 6, 2021

Place: Sacramento

Phone: (916) 654-0312

From: Plant Health and Pest Prevention Services

Subject: **AQW Pest Report No. 19-2021**

Weekly AQW Report: For the week of May 06, 2021, to May 12, 2021

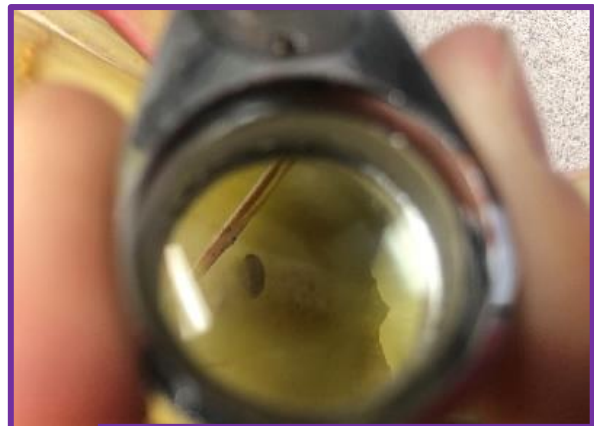

Attached is the report of all A, Q, and W pests intercepted or detected in California from May 06, 2021, to May 12, 2021. Pests were identified by the California Department of Food and Agriculture's Plant Pest Diagnostics (PPD) Laboratory.

Fresno County Dog Team Interception

PDR: 100P50001195

On May 07, 2021, Fresno County Dog Team Inspector/Handler Samantha Tomlinson with Detector Dog Soya and Inspectors Tegan Turner and Amanda Clark intercepted a package from Hawaiian shipper Maui Floral at a FedEx facility in Clovis. The package was properly marked containing *Protea* sp. (protea) cut flowers certified with a Maui Cut Flowers Stamp #453.

Upon inspection of the cut flowers, Inspectors Turner and Clark found a suspect pest on a protea leaf. The pest sample was collected and submitted to the PPD Entomology Laboratory where it was identified as Q-rated Pseudococcidae (mealybug).

Q-rated Pseudococcidae pest (seen through a lens) found on protea cut flowers from Hawaii. (Photo courtesy of Fresno County.)

A Notice of Rejection was issued for violating California Food and Agricultural Code (FAC) [Section 6461.5](#) (live pests) and the package was destroyed.

Los Angeles County High Risk Interception

PDR: 190P06622580

On May 06, 2021, Los Angeles County Agricultural Biologists/Inspectors Emmanuel Ofiabulu, Boyd Ruse, and Laura Kopase conducted a routine agricultural inspection at the Los Angeles International Airport (LAX). During the inspection, Inspector Ofiabulu encountered a commercial shipment containing 61 sacks of taro plant stems sent by Chuan Produce from Honolulu, Hawaii. The shipment was certified with a USDA Hawaii Release Stamp HNL.

Upon closer inspection, Inspector Ofiabulu found a live suspect giant African snail (GAS) harboring in the sacks of taro plants. A pest sample was collected and sent to the PPD Entomology Laboratory where it was confirmed as A-rated *Lissachatina fulica* (snail).

A Notice of Rejection was issued for violating California FAC [Section 6461.5](#) (live pests). The infested shipment was destroyed by freezing. *Lissachatina fulica* is a [Federally Actionable Pest](#) but was found on domestic material and therefore Smuggling Interdiction and Trade Compliance (SITC) was not notified.

Learning Tool:

Full grown Giant African Snails (GAS) reach up to 20 cm in length and 12 cm in maximum diameter. The dark and light brown (sometimes more of a cream color) swirls wrap around its cone-like shell. Its convex body allows for about 7 to 9 whorls. GAS are intercepted most often in Californian ports from shipments containing goods and plants from Hawaii, Guam, and the Pacific Islands.

Snails are hermaphrodites, which means that they contain both female and male reproductive organs. GAS can produce from 10 to more than 400 eggs in 8 to 20 days after mating. Under optimal conditions a single snail can produce from 300 to 1000 eggs in 3 to 4 batches per year. GAS' lifespan is about 3 to 5 years. However, some may live as long as 9 years.

Even though GAS prefer and thrive in humid and warm conditions, they are highly adaptable to dry and cooler climates. They hibernate 10 to 15 cm deep in soft soil during less favorable conditions for up to one year. Their herbivore diet includes over 500 different plant species, including breadfruit, cocoa, papaya, peanut, rubber, most types of beans, peas, cucumbers, and melons. In addition, they forage on animal matter, lichens, algae, and fungi.
