

Cisco's Approach to Sustainability

Cisco is committed to sustainability, and we are passionate about helping our customers meet their Net Zero goals. Our technology solutions can enable sustainability for industries in a scalable, reliable, and secure manner. We can't do it alone. Collaboration with global and local partners has always been part of our approach to driving lasting impact.

Between meeting human needs and a sustainable future there is a bridge.

Energy saving Accelerators

Optimize your network's energy consumption and efficiency (through CX advisory services and Cisco solutions).

Data is instrumental in monitoring sustainability metrics to track your progress towards your company Sustainability goals.

Discover how you can extract insights and optimize your IT power consumption with Cisco Sustainable Solutions.

Sustainability Simulator

Save energy in your network upgrade: Sustainability Simulator.

The Sustainability Simulator models the estimated amount of energy savings, emissions reduction, and environmental impact that a customer may realize by migrating from hardware that will no longer be supported within the next 3 years to Cisco's latest generation of products.

Cisco's Takeback and Reuse Program

Sustainability is becoming the forefront for companies' KPIs and Environmental Goals. At the World Economic Forum in 2018, our CEO joined forces with the Platform for Accelerating the Circular Economy (PACE) in signing the Capital Equipment Pledge, committing to 100 percent product return upon request, at no cost to our customers.

Cisco's Takeback and Reuse Program allows customers to easily return surplus Cisco products (and selected non-Cisco products) to Cisco free of charge.

Cisco will ensure that all returned products are stored in a secure location, that data is cleared to protect data security and is dealt with in a sustainable fashion. Cisco reuses or recycles more than 99% of what is returned.

SIMPLE - SECURE - SUSTAINABLE

Receiving and Processing Center

A new life to Cisco products for your sustainability goals.

As part of Cisco's Sustainability programs and in support of Cisco's pledge, we offer the ability to return at no cost to the Customer/Partner any unwanted Cisco electronic equipment using various returns tools and platforms, facilitating the re-use & or recycling in a sustainable way supporting your ESG (Environmental Social & Governance) targets.
