Safe to say: more performance!

Product selection based on risk assessment

Note:

The simplified risk analysis process shown here is only intended to provide a quick introduction to product selection. You will find information on the process, in accordance with ISO 12100, in → Chapter A, page A-15 as well as → Chapter Q, Safexpert.

SICK Online Portal: The quick way to higher efficiency at work

Work online at www.mysick.com

Fast results instead of tedious searching - with the SICK “Finders.” Direct access for everyone, no registration necessary!

- Product search, products and information is linked
- Easy to understand illustrations of applications, connection diagrams and accessories
- Download of technical data, drawings and graphics

Product Finder

We will quickly guide you right to the appropriate device for your application.

Applications Finder

Choose an application based on task, industry/market or product group.

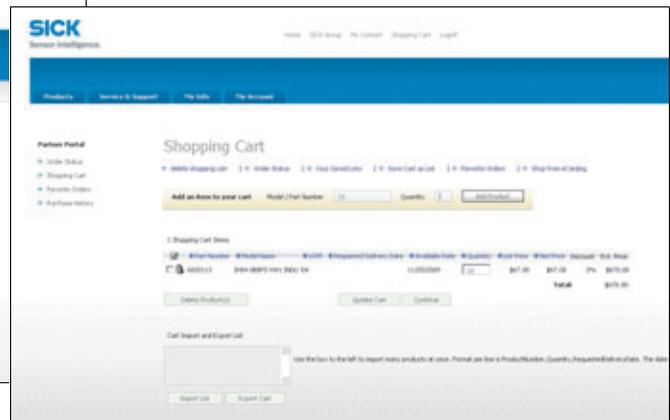

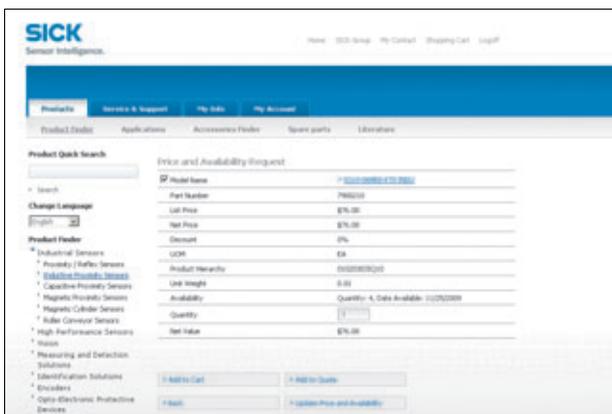

Literature Finder

Access all publications, e.g., operating instructions, technical information, customer magazines and other literature about SICK products.

Services Finder, Connection Diagram Finder, Spare Parts Finder and Accessories Finder also at www.mysick.com.

Online ordering and management at www.mysick.com

Register – save time and improve safety with online development and planning tools.

Request price and availability

Find the price and delivery date of the desired products easily and quickly.

Request for a quote

You can enter a reference number for a quote. The quote is available online. Each quote is confirmed via e-mail.

Online orders

You can carry out the order process in just a few steps.

Experience

SICK is a technological and market leader in sensor technology. With headquarters in Waldkirch, Germany and more than 5,000 employees in almost 50 subsidiaries, numerous -representatives and holdings, SICK has a solution for your application no matter where you are in the world.

Innovation

SICK achieves product innovation by means of consistent development. It has five development sites in Germany and a total of seven other sites all over the world. SICK turns customers' needs into automation solutions that increase efficiency and reduce costs.

Independence

SICK is large enough to be independent – but still flexible enough to react quickly. As a result, we can concentrate on the development of products the market needs without interference.

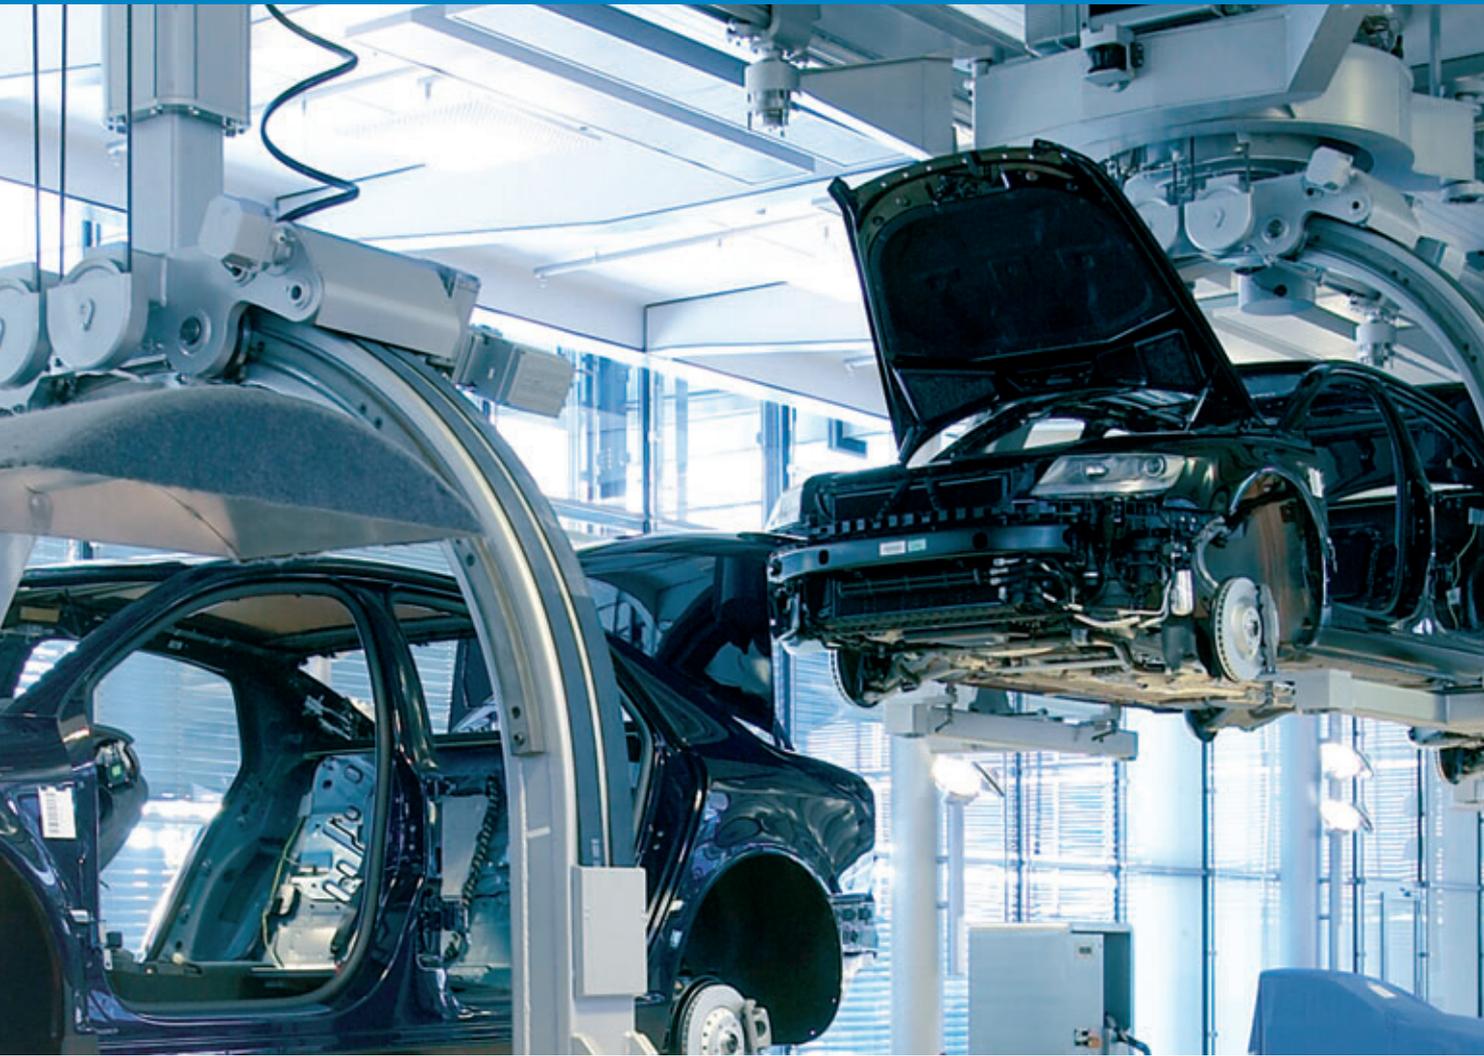

What you get from working with SICK

We help to increase your efficiency

As a leading manufacturer of automation solutions for industrial applications, we are familiar with the processes in our customers' organizations – and we are particularly familiar with their requirements for increased efficiency.

The focus and how you benefit from it

We provide safety

SICK concentrates strictly on the development and production of sensors for factory, logistics and process automation. The result is innovative, powerful products and systems that provide our customers the highest level of safety and increased quality.

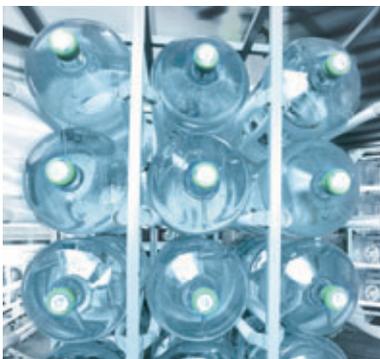

Openness

The secret behind our success

All sensors in principle work in any automation scenario.

This level of openness provides our customers with maximum freedom and creates the best possible safety solution.

Factory automation

- Electro-sensitive detection, counting, classification and positioning of objects
- Detection of shape, position and surface differences
- Protection against accidents and protection of people with sensors, safety software and safety services

Logistics automation

- Automatic identification using bar code and RFID readers for sorting and destination control in industrial material flow
- Detection of volume, position and outline of objects and surroundings using laser measurement systems

Customers' markets and how we view them

We are familiar with your processes

Sensors from SICK are ideal for all automation in industry, regardless of the type of production processes used or which products are manufactured. For this reason in particular: as a development partner for industry, it is crucial for our success that we are fully familiar with the production steps in every market.

Versatility

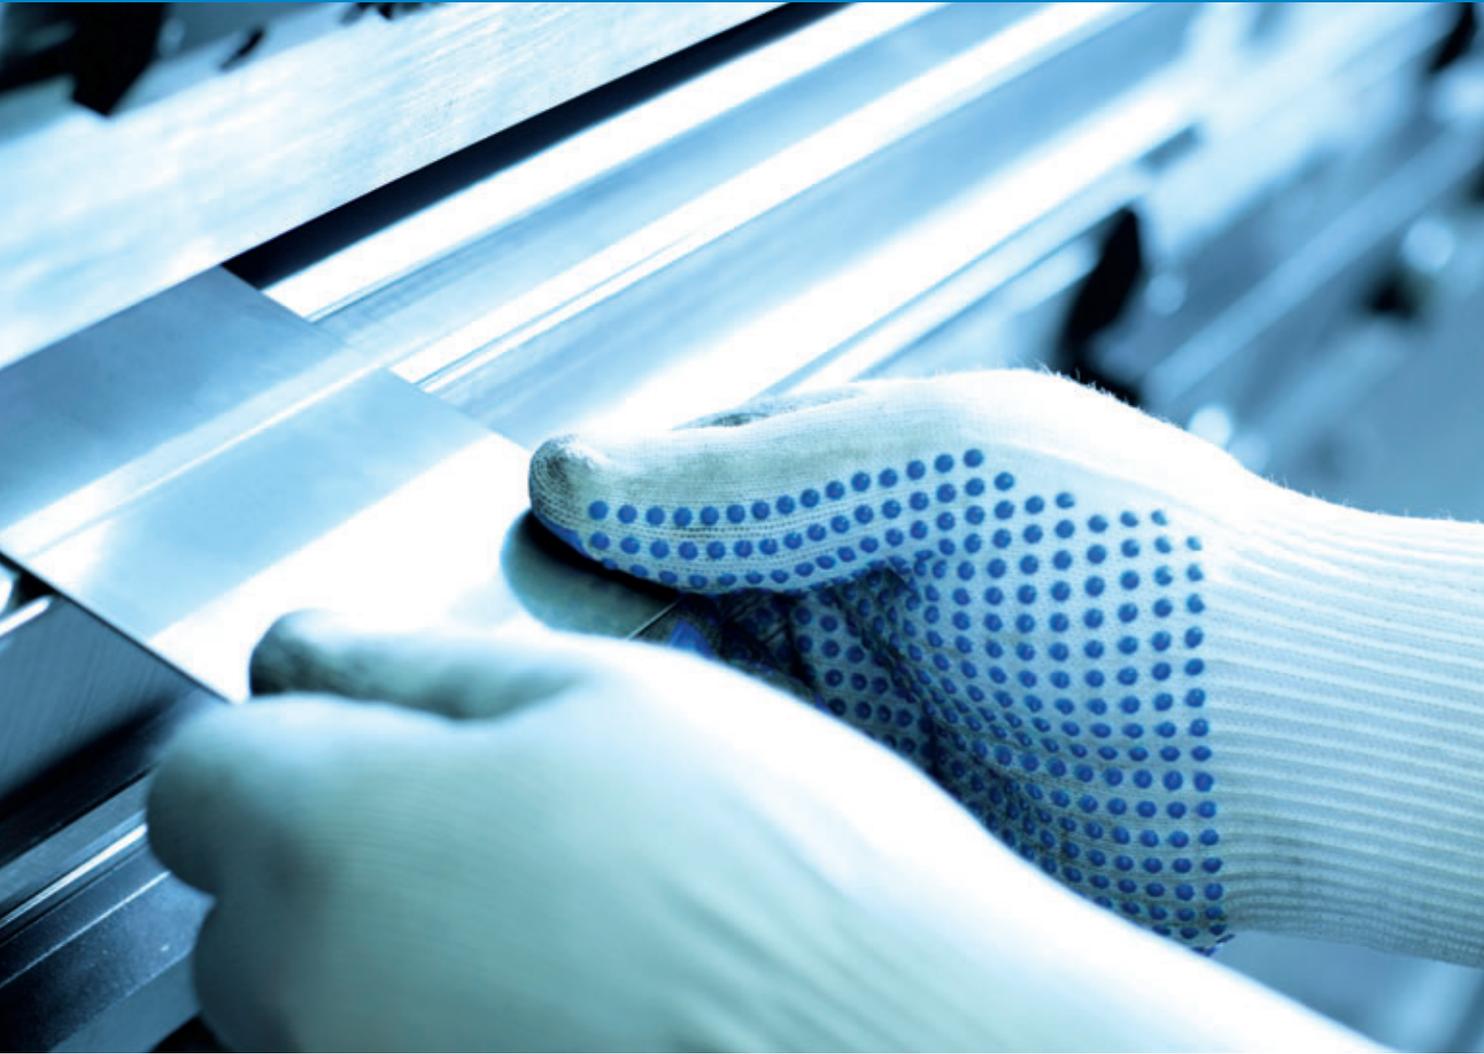

With its specialized market expertise, SICK is your partner in the following markets:

- Automotive
- Robotics
- Pharma & Cosmetics
- Consumer goods
- Food
- Beverage
- Machine tools
- Electronics & Solar
- Wood
- Print & Paper
- Textile
- Courier Express Parcel, Postal & Cargo
- Warehouse & Distribution
- Mobile vehicles
- Ports
- Traffic
- Airports
- Building automation

Automotive industry

Our holistic view of optimization potential makes automated processes safer, faster and more transparent. The result is increased plant availability, while at the same time providing safety for workers and machines.

Food & beverage

With comprehensive knowledge, SICK understands every detail in automated production and handling. Perfectly matched sensors ensure plant safety and meet stringent hygienic requirements.

Logistics

In an increasingly global economy, the demands on logistics processes are growing steadily. With tailor-made solutions and products for control, -identification, monitoring and measuring, SICK ensures customers have an efficient logistics chain.

Seeing details, understanding the big picture

SICK is a worldwide leading manufacturer of intelligent sensors and sensor solutions for all areas of factory, logistics and process automation. The company's comprehensive product portfolio is always oriented to delivering customer benefits. Years of practical experience and thousands upon thousands of application solutions go into creating precisely those products that will support your effort to design processes more efficiently and economically. SICK sensors take on tasks like measuring, detecting, safeguarding, identifying and positioning, for example. And they do the job in all areas of industrial production and logistics.

SICK sensors are almost everywhere: they detect production differences and quality deviations, and optimize workflows in all automated production processes. As part of accident prevention and personal protection, they safeguard access to robot stations and automatic conveyor sections, and they ensure the efficient flow of material in automatic identification systems.

Let's talk about the best solution to your automation tasks.

A

Safety, efficiency and more: safetyPLUS®

Complete solution for effective health and safety protection

For more than 60 years, SICK has developed innovative solutions. By offering the world's most comprehensive safety portfolio, we set international standards for performance and functionality. This makes us the leading provider of advanced products and services related to industrial safety.

Experience and competence

safetyPLUS® is a holistic safety concept offering a unique range of services. safetyPLUS® ensures each application adheres to the appropriate safety directives and standards to provide optimum protection for both man and machine. In addition, a comprehensive safety concept based on safetyPLUS® saves time and money.

High technology and system openness

We provide complete safety applications from a versatile product portfolio. SICK is dedicated to providing seamless integration in all safety and system environments.

Ethernet

Simple, clever safety solutions

We offer trend-setting products and application-oriented functionality. safetyPLUS® provides a unique, all-encompassing package that includes safety switches, opto-electronic sensors, safety camera systems, and safe control solutions and networks.

SICK technology is easy to use and will continue to meet changing industry demands.

Comprehensive services

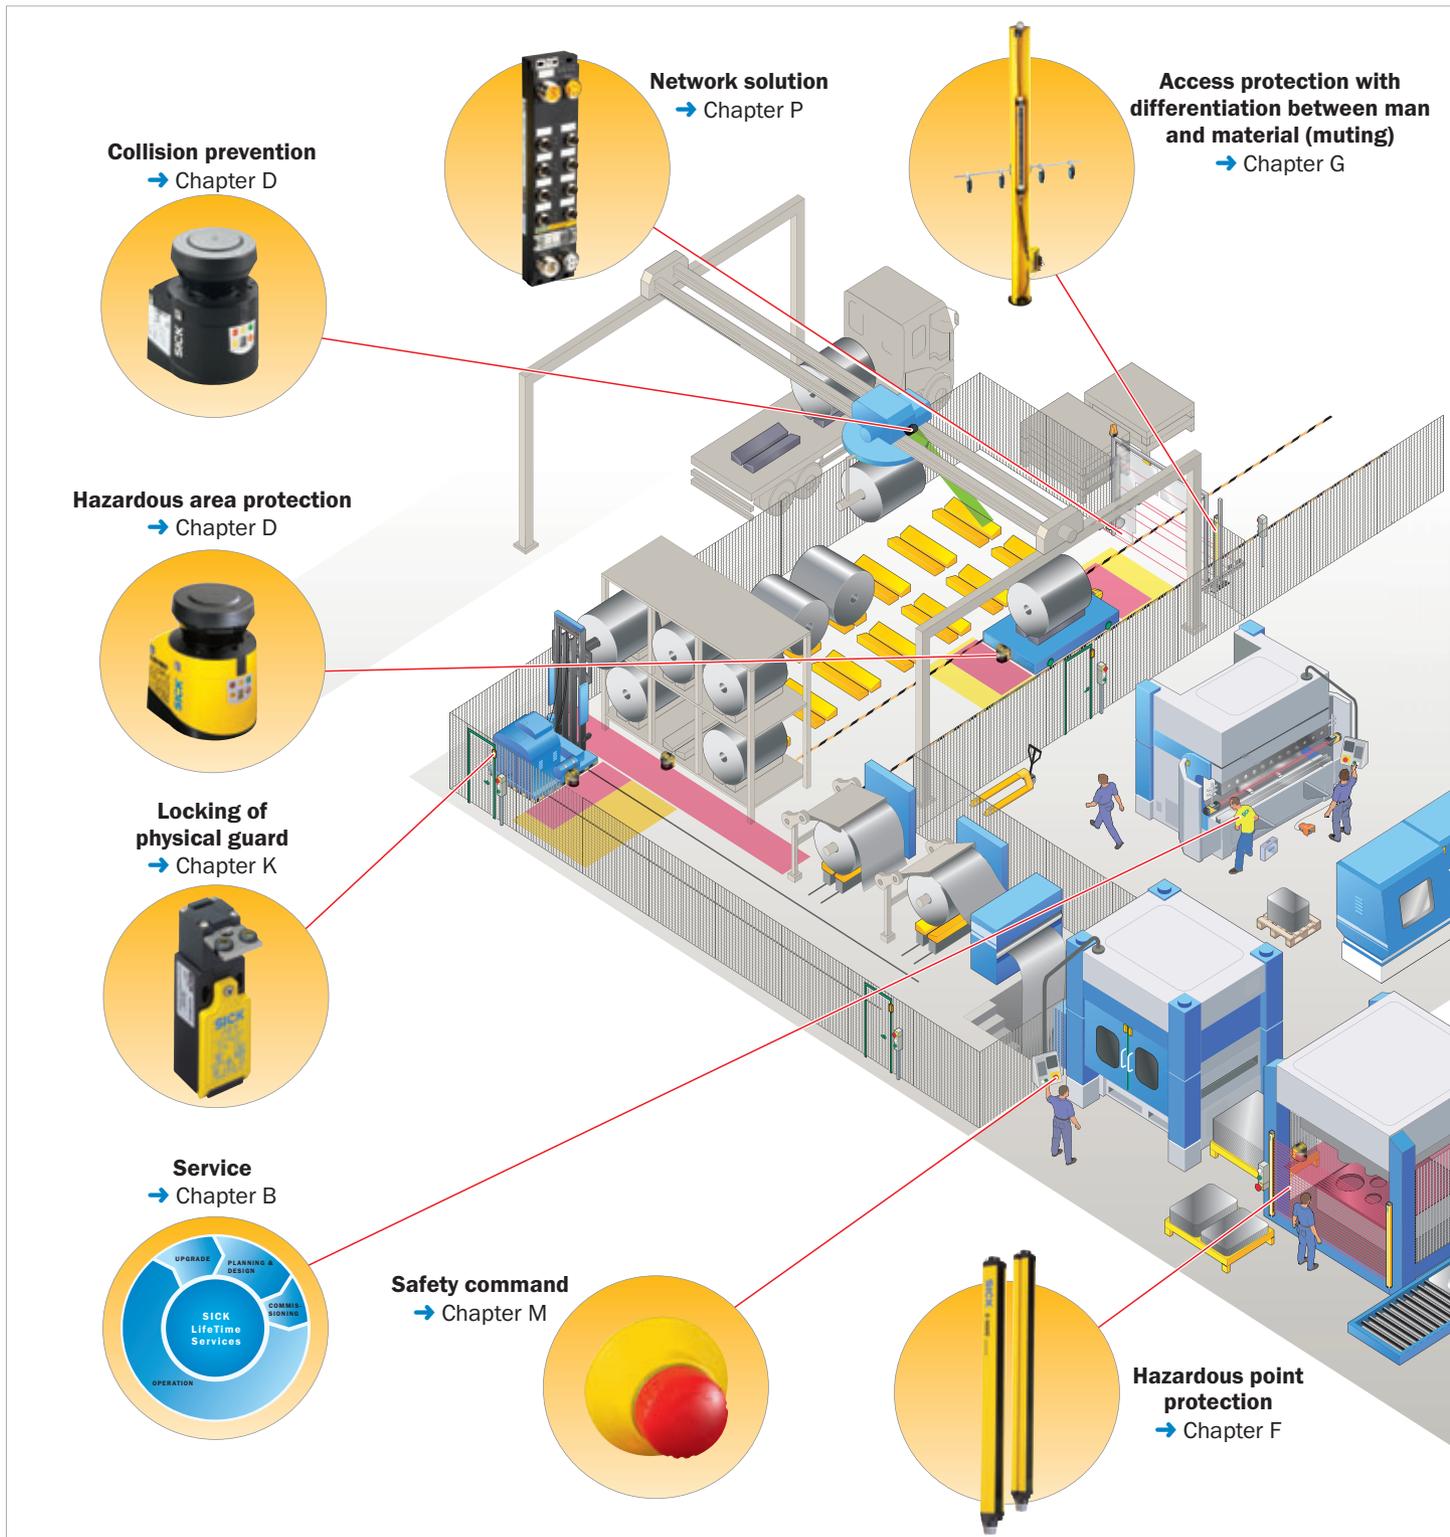

Our safety solutions not only comply with statutory requirements, but we also provide high-quality service support. Customers receive: CE conformity advice, application support, support during commissioning, accredited inspection services, product support, service upgrades, service contracts and training courses. From your first installation to your monthly maintenance check-up, the experts at SICK will accompany you through every phase of the project.

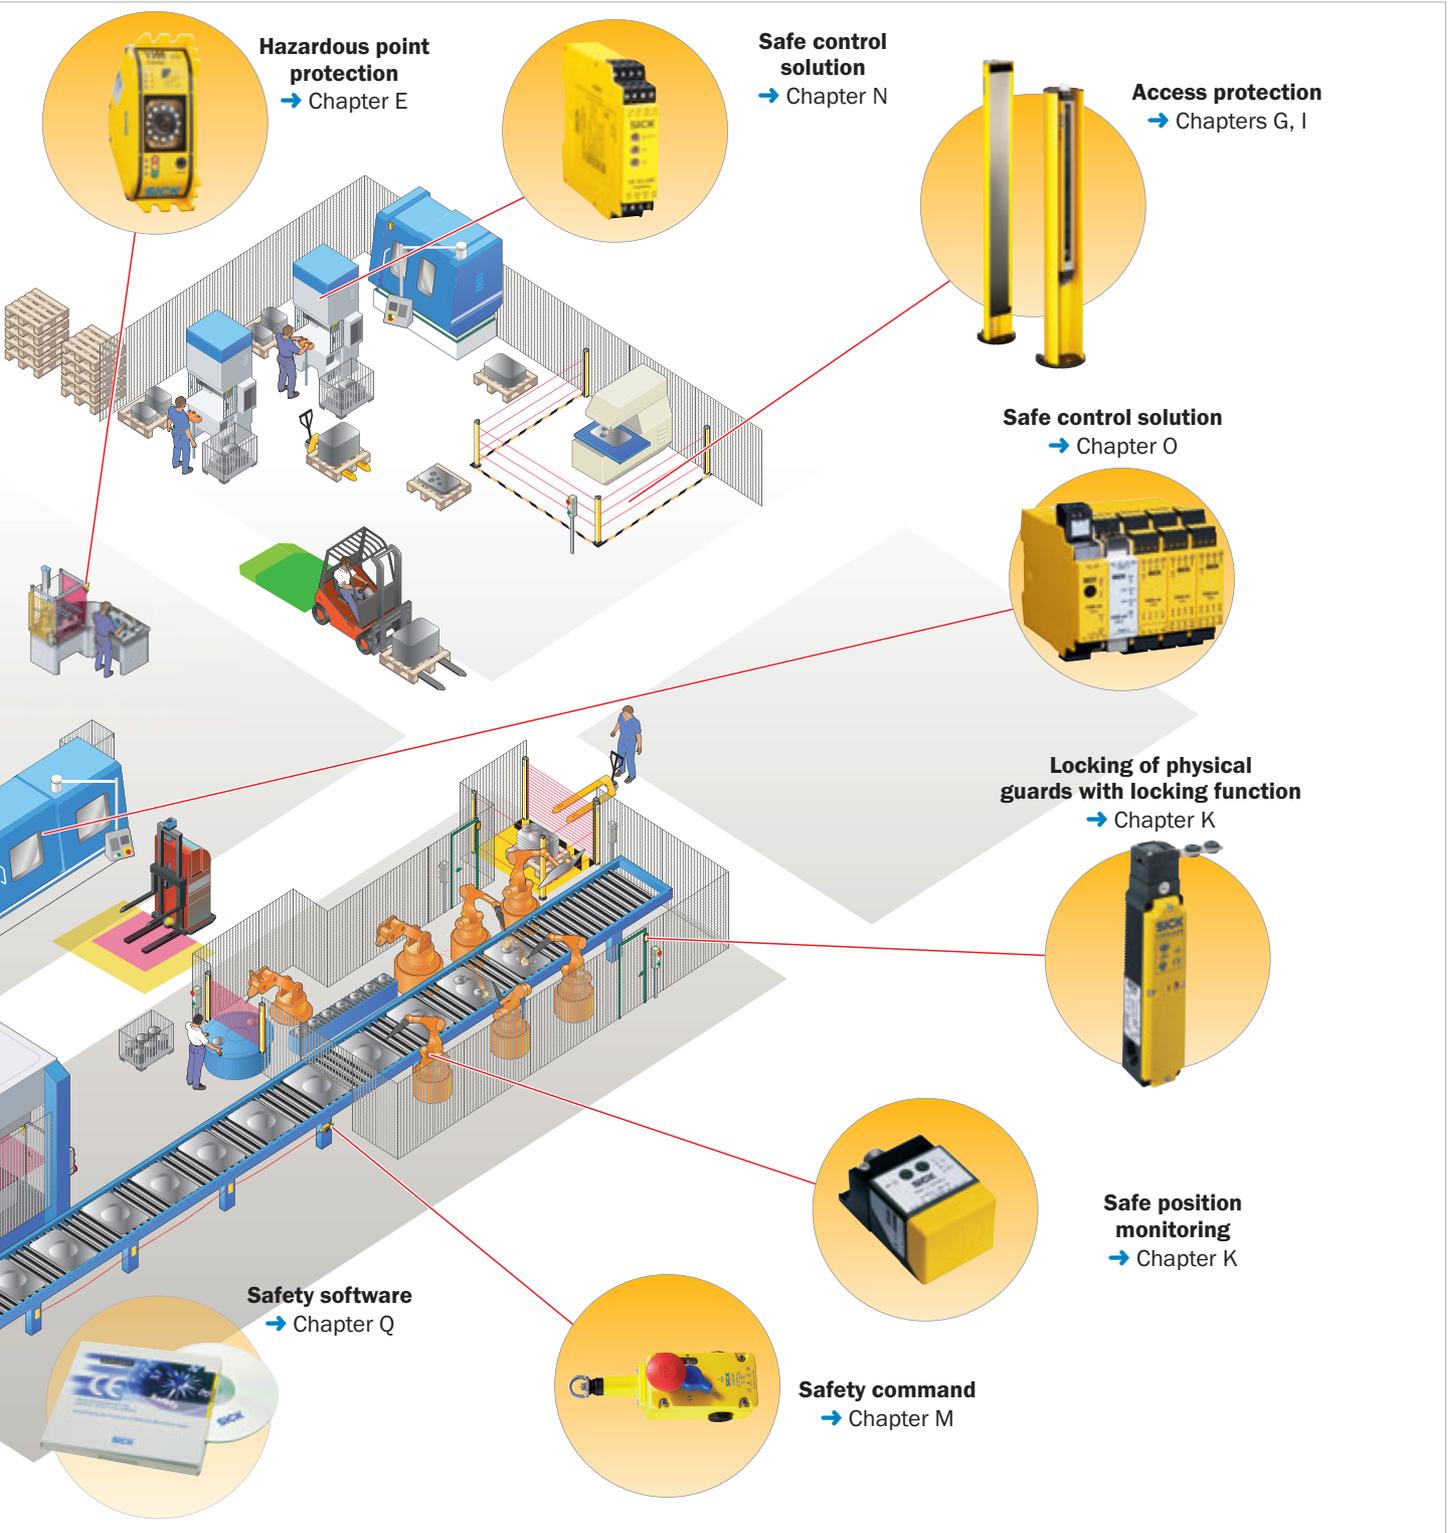

A safetyPLUS®

SICK safety solutions are available for all safety tasks on machines and systems. A comprehensive product portfolio is supplemented by safety software, engineering tools, services, and seminars related to machine safety.

A

SICK safety solutions with safe fieldbuses and standard fieldbuses

The outputs (contacts, OSSDs) on all safety sensors and switches can be integrated into safe fieldbuses and standard fieldbuses using appropriate controllers or remote I/O (see p. A-6).

The SICK-specific EFI and SDL interfaces (see p. A-8) transfer additional data that can be used for process optimization. SICK supplies corresponding gateways and control components.

A Enhanced interface function EFI/SDL

The SICK-specific EFI and SDL interfaces are used for safe data transfer and enhanced functionality and diagnostic capabilities.

SICK provides corresponding gateways and control components. (see page A-4 to A-7 and A-9)

Integration via OSSDs

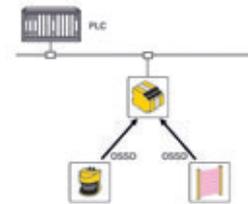

The OSSD output (OSSD = output signal switching device) is the safe output signal switching device on an opto-electronic protective device (e.g., C4000 a safety light curtain, S3000 safety laser scanner).

If the protective field is interrupted, the safety sensor switches the output signal switching devices (OSSDs) to the OFF state. This initiates the shutdown of the machine or the shutdown of the dangerous state.

Each safety sensor has two OSSD outputs that operate in parallel. Depending on the required level of safety, these outputs must be evaluated separately (dual-channel).

For example, connecting opto-electronic protective devices to a safety relay or a safety controller for category 3 acc. to EN 954-1 or Performance Level d acc. to EN ISO 138491 is done using 2 OSSD outputs on the opto-electronic protective device. When safety sensors are integrated using OSSDs, bi-directional communication is not possible. The safety sensor signals the status

information "protective field clear." This status information is evaluated in the safety controller or in the safety relay. Diagnostics via the safety controller are not possible.

Advantage:

- Shortest response time for short minimum distances to the hazardous area
 - space-saving machine design

Integration via EFI

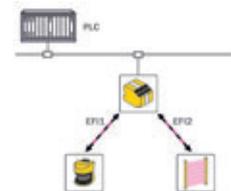

The SICK-specific EFI (EFI = Enhanced Function Interface) was developed to provide safe communication between opto-electronic protective devices, safety controllers or gateways.

Using this EFI, it is not only possible to perform diagnostics and to transfer the process data from several users with little installation effort, but the functionality of the individual protective device is also expanded and the extensive diagnostics information is available to all EFI users.

Expanded functionality means:

- Simultaneous protective field evaluation (S3000 safety laser scanner)
- Protective field switching
- Operating mode switching
- Sampling of status signals (e.g., contamination of the front screen)

EFI provides a quick overview of the entire system configuration, which means increased capacity to act, and therefore, increased machine availability.

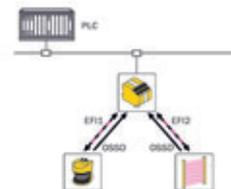

Advantage:

- Higher system availability
- Easy, flexible configuration with the ability to switch protective device functions via the system safety controller

Integration via SDL

To perform diagnostics and to achieve the fastest response times, SICK makes it possible to connect multiple sensors to the safety controller using the interaction of EFI and OSSDs (abbreviation SDL = Safety Data Link).

By means of this optimal EFI and OSSD connection, the EFI users can communicate with each other and the machine can be switched to a safe state as quickly as possible.

Advantage:

- Shortest response time for short minimum distances to the hazardous area
 - space-saving machine design
- Higher system availability
- Easy, flexible configuration with the ability to switch protective device functions via the system safety controller

SICK safety solution with standard communication interfaces

A

Safety sensors and control solutions from SICK can be easily and effectively integrated at the system level into your automation environment via standard communication interfaces.

As a result, it is possible to set parameters and perform diagnostics via the standard protocol used.

You will find a selection guide of standard technologies and compatible devices in this overview.

Selection of opto-electronic protective devices

Opto-electronic protective devices and safety standards

Up until the end of 2009, the necessary level of safety for a control function was defined by machine designers during the risk analysis and risk assessment stages, which predominantly used categories B, 1, 2, 3, 4 in EN 954-1.

For the technical protective measures, opto-electronic protective devices (ESPE) were used, among other devices. These devices are classified by types 2, 3 and 4 in accordance with the IEC 61496 series of standards.

Based on the type, a direct reference was established to categories 2, 3 and 4 in EN 954-1 (see table below).

Risk reduction

Minor risk reduction		Examples from SICK	
Category in accordance with EN ISO 13849-1 or EN 954-1	Type according to IEC 61496		
2	2		L2000 single-beam photoelectric safety switch M2000 multiple light beam safety device C2000 safety light curtain miniTwin2 safety light curtain S200 safety laser scanner V200 safety camera system
3	3		S300 safety laser scanner V300 safety camera system
4	4		L4000 single-beam photoelectric safety switch M4000 multiple light beam safety device C4000 safety light curtain miniTwin4 safety light curtain
High risk reduction			

The greater the risk reduction required, the higher the category and therefore the higher the ESPE type.

EN 954-1 has been further developed into EN ISO 13849-1 in which the reliability of safe control functions is defined using the Performance Level (PL) a, b, c, d and e.

The PL e represents the highest level. Along with the structural requirements described by the categories, the probability of a dangerous failure, measures to detect failures and to control failures, the prevention or control of systematic failures and the

quality of the design process are also included or addressed in more detail during the assessment.

EN 62061 with the Safety Integrity Level (SIL) 1, 2 and 3 takes the same approach. The following information applies similarly to the Safety Integrity Level (SIL) required.

Is taking into account only the PL enough to select an opto-electronic protective device?

Unlike simple control systems, such as electronic safety switches, opto-electronic protective devices must consider additional criteria.

This additional criteria includes the necessary detection capability, which is defined by optical principles, and the reliability of the detection capability defined in the IEC 61496 series of standards (see table below).

Additional requirements from EN ISO 13849-1 and IEC 61496

Functional safety	Resistance to environmental effects	Electromagnetic compatibility	Detection capability
EN ISO 13849-1 primarily describes requirements regarding the functional safety of safety-related parts of control systems: <ul style="list-style-type: none"> ▪ structure (categories) ▪ probability of dangerous failure ▪ measures to prevent failures and to detect failures ▪ prevention or control of systematic failures ▪ quality of the design process ▪ documentation 		IEC 61496 describes the requirements on opto-electronic protective devices: <ul style="list-style-type: none"> ▪ construction of the ESPE ▪ optical features ▪ detection capability ▪ reliability of the detection capability ▪ EMC ▪ structure (categories) 	
PL EN ISO 13849-1		+	Type IEC 61496

Consideration of the optical features

The detection capability describes the capability to safely detect objects of a certain size (e.g., 14, 30, 40 mm for safety light curtains) that will cause the outputs (OSSDs) to shut down on the opto-electronic protective device.

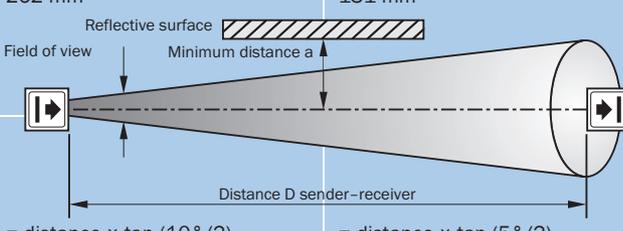

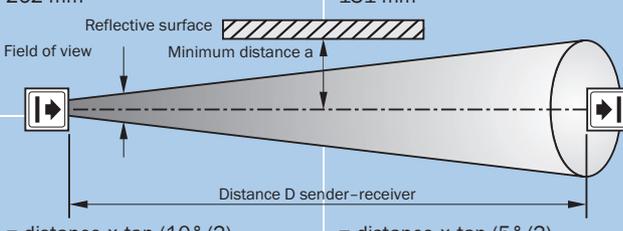

Detection capability is one of the primary parameters employed to define use, e.g., for finger, hand or body detection and the minimum distance from the hazardous point.

The reliability of the detection capability is determined by the classification type. The requirements on type 4 devices are higher than type 2.

Requirements for optical interference sources (sunlight, different types of lamps, devices of the same design, etc.), reflective surfaces, incorrect alignment in normal operation and on diffuse reflection play an important role in determining the detection capability of safety laser scanners (see table p. A-12).

A

Main differences between ESPE of type 2 and type 4 according to IEC 61496

	Type 2	Type 4	Advantage of type 4
Functional safety	Between the test intervals, the protective function may be lost during a failure.	The protective function is retained even during several failures.	Higher risk reduction
EMC (electromagnetic compatibility)	Basic requirements	Increased requirements	Higher reliability of the detection capability Higher system availability in difficult ambient conditions. Installation closer to the machine → saves space
Maximum field of view of the optics ¹⁾	10°	5°	
Minimum distance a to reflective surfaces over a distance D of < 3 m	262 mm	131 mm	
Minimum distance a to reflective surfaces over a distance D of > 3 m	 = distance × tan (10°/2)	 = distance × tan (5°/2)	
Several senders of the same design in a system (workplace)	No special requirements (Beam coding is recommended)	No effect; however, if affected, OSSDs switch off	

¹⁾ The limitation on the maximum field of view of the optics for type 4 devices to 5° reduces the probability of the failure to detect objects due to reflective effects and, therefore, reduces the probability of a dangerous failure.

Important

For selection of opto-electronic protective devices, the product's classification as well as Performance Level must be taken into account in order to achieve the necessary risk reduction.

Type 2 or type 4?

The current IEC 61496 does not yet contain any relationship between the type classes and PL or SIL. As a result, the designer must rely on extensive experience or additional support.

The following factors aid in the selection of either type 2 or 4 for AOPDs (single-beam photoelectric safety switches, multiple light beam safety devices, safety light curtains), which are recommended by SICK (date July 2010):

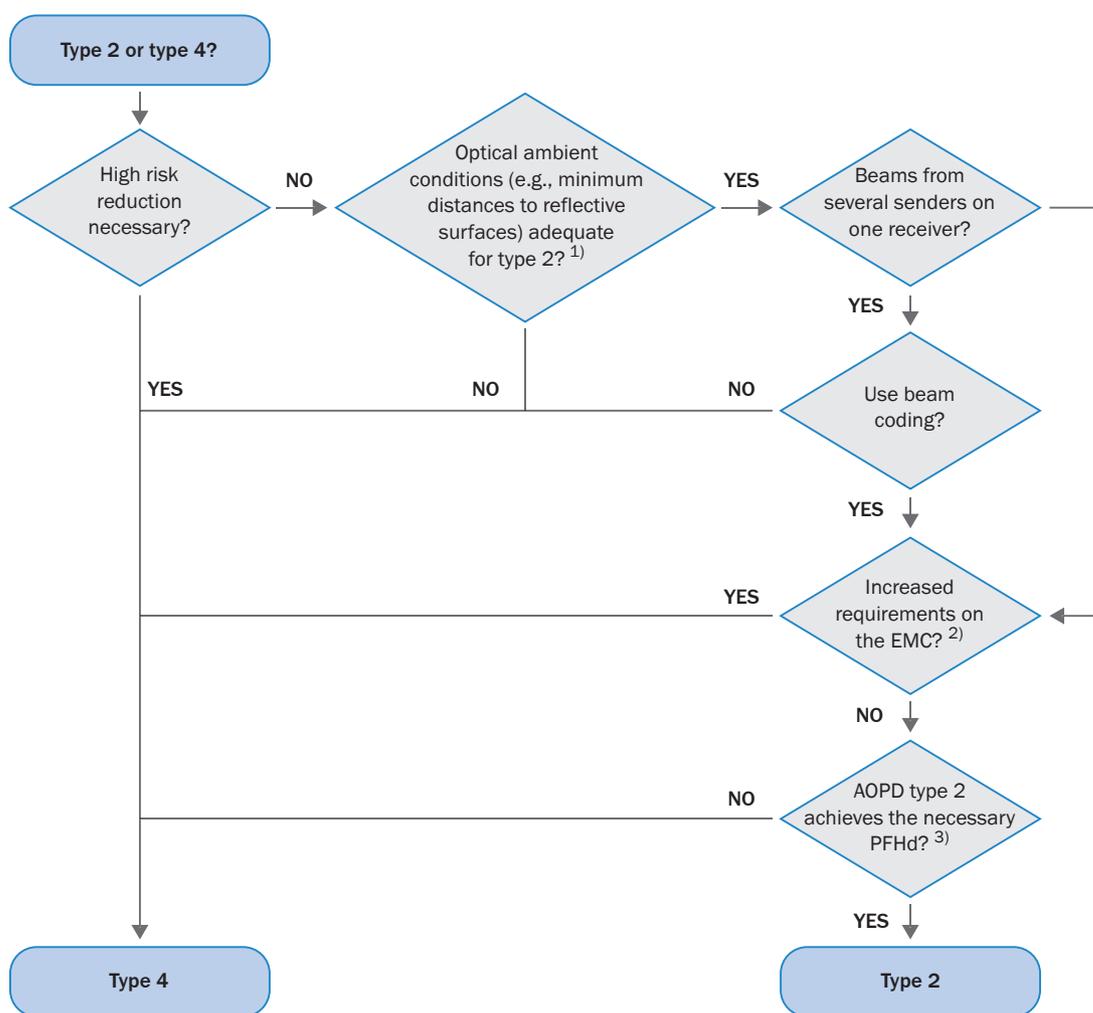

1. Consideration of C-type standards

Take into account the definitions in the existing C-type standards (product standards for special machine types).

See list of standards in the Official Journal of the European Union: [→ www.ec.europa.eu/enterprise](http://www.ec.europa.eu/enterprise).

2. Scheme for the selection of the necessary AOPD type

If the definitions in the C-type standards are not yet adapted to the new safety standards or there is no suitable C-type standard, the following scheme can be used:

¹⁾ Optical ambient conditions, → page A-12.

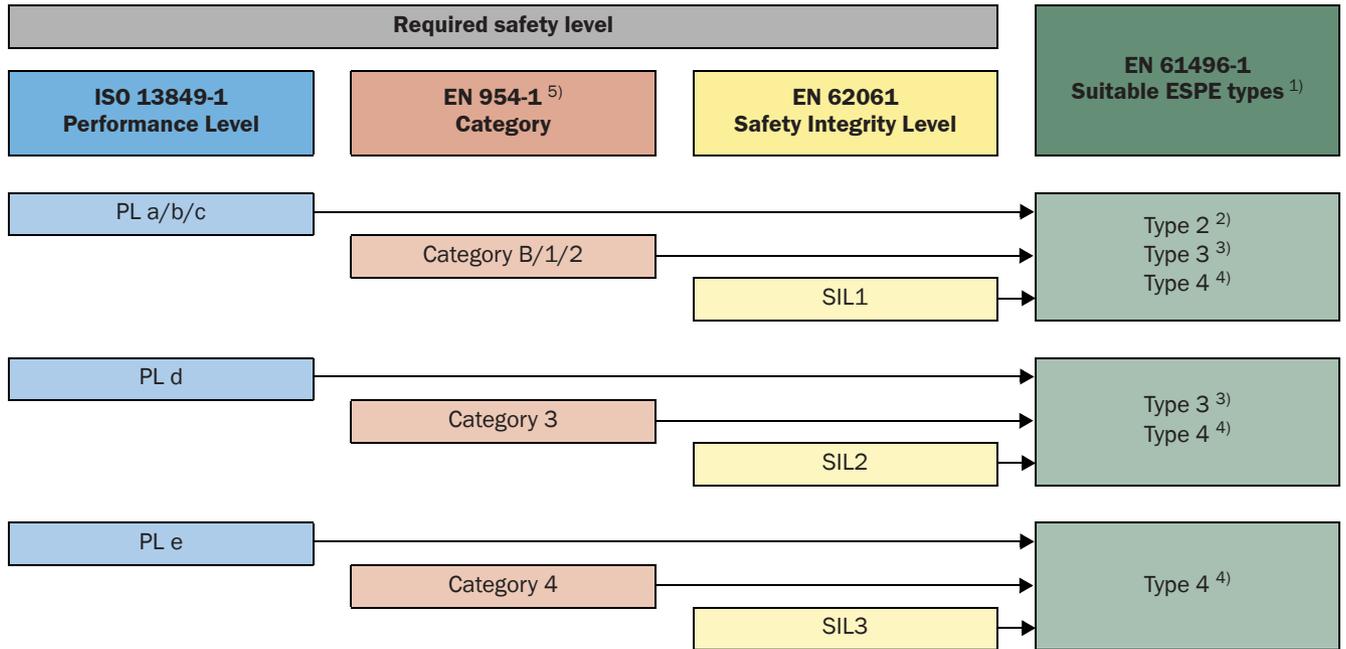

²⁾ The following can occur:
 - High frequency radio signals on the cables (e.g., transmitters in the vicinity)
 - High voltage electrostatic discharges (ESD)
 - Powerful electromagnetic fields (e.g., due to welding processes)

- Powerful burst/surge interference (e.g., due to electrical switching in the vicinity or systems in the vicinity that are poorly protected against lightning).

³⁾ PFHd: Probability of dangerous failure per hour (see technical specifications).

A 3. Recommended allocation PL/category/SIL to type

When in doubt, the following allocation is recommended:

¹⁾ ESPE: Electro-sensitive protective equipment

²⁾ Type 2: E.g., single-beam photoelectric safety switches, safety light curtains.
For the necessary external tests and their demand rates see technical specifications.

³⁾ Type 3: E.g., safety laser scanners, safety camera systems

⁴⁾ Type 4: E.g., single-beam photoelectric safety switches, safety light curtains

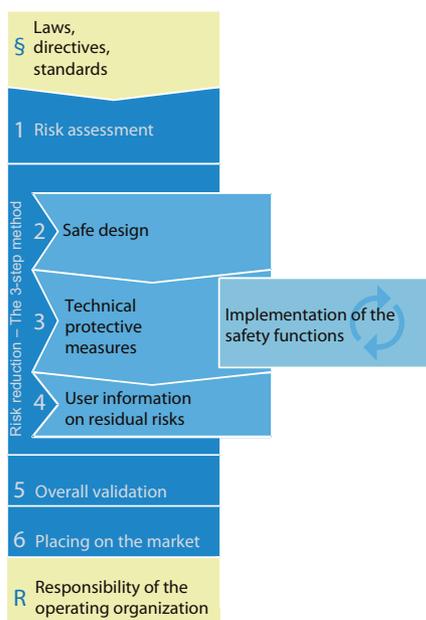

⁵⁾ Not suitable for electronic, programmable or complex protective measures. SICK recommends the application of EN ISO 13849-1.

The operating instructions for the opto-electronic protective devices contain further application information and instructions that must be taken into account.

Six steps to a safe machine

Safe machinery provides legal security for the manufacturer and the operating organization. Since machine operators worldwide expect to be provided with safe machinery and devices, there are also regulations on the protection of users of machinery. Although these regulations are subject to regional variations, there is broad agreement on the process to be employed during the manufacture and upgrade of machinery:

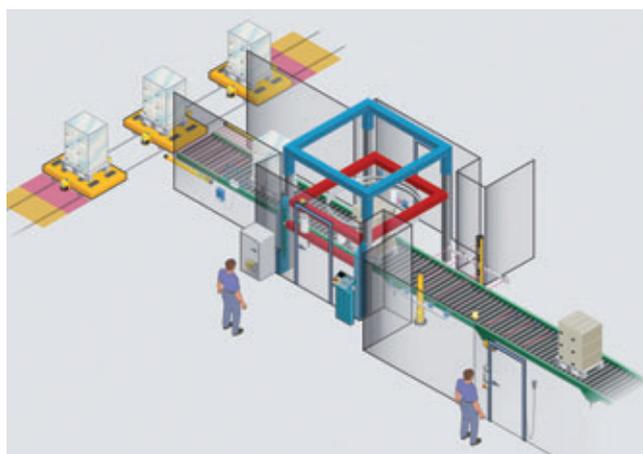

- During the manufacture of machinery, the machine manufacturer must identify and evaluate all possible hazards and hazardous points by performing a risk assessment (formerly called a hazard analysis).
- Depending on this risk assessment, the machine manufacturer should eliminate or reduce the risk by suitable measures. If the risk cannot be eliminated by design measures or the remaining risk cannot be tolerated, the machine manufacturer shall select and use suitable protective devices, and provide information on the residual risks, if necessary.
- To ensure the intended measures are effective, overall validation is necessary. This overall validation shall evaluate the design and technical measures, as well as the organizational measures in context.

We have bundled together our many years of practical experience and published our findings in the “Guidelines for Safe Machinery – Six steps to a safe machine.” With these steps we guide you to a safe machine.

You will find structured information on:

- legal requirements for machinery and their implementation
- safety-related directives, regulations and standards
- selection and application of protective devices
- examples on how to protect machines and people against accidents
- examples on the application of the new standards EN ISO 13849-1 and EN 62061 for the determination of the PL or the SIL

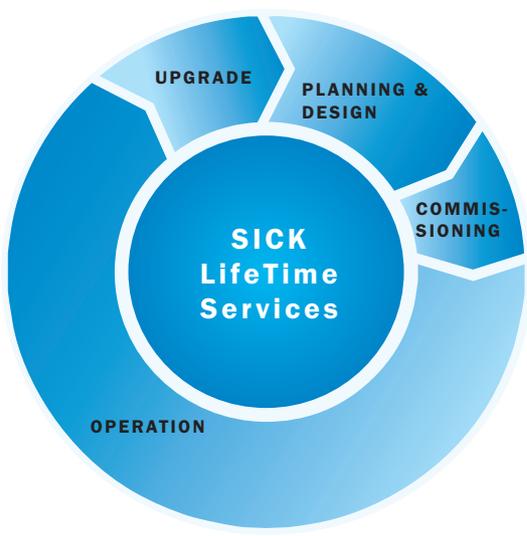

“Guidelines for Safe Machinery – Six steps to a safe machine” is available for download from www.mysick.com in the SICK documentation finder (publication type: competence brochure) or can be ordered as a printed brochure from your SICK contact. Part numbers for the European issue:

Services & Support

International Service Solutions

B

Safety you can trust

Increasing production targets and associated cycle rates require greater networking and automation. The result: production plants are becoming more complex and operation more demanding. You have to be able to trust the safety of your production plants.

Productivity in focus

Modern safety solutions offer the optimum combination of safety and efficiency: intelligently co-ordinated emergency stop strategies, zone concepts or muting functionalities optimize production work flow. Industrial safety technology increases machine availability and cuts downtime – we know your needs! With services from SICK you benefit - throughout the entire life cycle of machines and plant - from the worldwide expertise of the market leader for safety systems and the experience it has gained in many industries and countless applications.

Inspection services with DIN EN ISO/IEC 17020 quality

Accreditation as an inspection body
 DATEch has accredited SICK as an inspection body according to the IEC or EN ISO 17020 standard. Accreditation fulfils an important function in today's business climate: an independent authority confirms that the activities defined within the scope of accreditation are carried out with a high level of dependability and with the necessary quality.

The high level of training and qualifications of our staff as well as the structure of our processes and methods ensures the best level of service for our customers. Constant monitoring and process improvement, as well as adapting to our customers' needs, are an advantage for you.

An annual external inspection by independent experts ensures the quality of these services.

- For customers this means:
- recognized verification methods
 - a high level of competence and dependability
 - objective inspection results
 - independent confirmation
 - international recognition

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

A systematic approach to minimizing risks on machines and technical equipment

Scope of services

Preparation of a documented risk assessment using Safexpert (in accordance with EN ISO 12100 and ISO 14121), which includes:

- A list of all safety requirements to ensure machine safety
- Analysis and evaluation of the hazards and risks related to the machine
- Evaluation and categorization of all safety-related parts of the control system (category/SIL/PL)
- Proposed solutions to obtain the necessary risk reduction

Advantages at a glance

- Time and cost savings by involving SICK experts at an early stage
- Compliance with directives and laws is planned as an integral part of a project
- Potential weak spots are identified at an early stage
- Necessary measures are implemented during an early project phase
- Avoidance of over-sizing
- Assurance of efficiency and competitiveness

Note

Please ask your SICK representative which service is available in your country.

A safety concept taking standards and directives into account

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Scope of services

Development of the necessary solutions for risk reduction in a concept document, which includes:

- Proposals on how to achieve compliance with essential safety requirements and international standards
- Functional description of the overall concept, including safety areas
- Layout including location of the safety-related equipment
- Functional safety assessment on safety related parts of the control system, based on a risk analysis and user information
- Dimensioning of the mechanical guarding including heights, safety distances, maximum openings
- Specification of the safety requirements including switch-off matrix, category, PL, SIL, stop category
- Basis for the preparation of hardware and software concepts

Advantages at a glance

- Increase in machine safety: Compliance with the essential health and safety requirements and international standards
- Flexibility - product-neutral concept design
- Overcompliance can be avoided, which ensures effectiveness and commercial competitiveness

Note

Please ask your SICK representative which service is available in your country.

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Professional planning and control of your projects right from the start

Scope of services

Effective project management includes:

- Preparation of contractual specifications
- Monitoring project progress while taking into account the schedule
- Supplier management
- Organizing of the activities on the customer's premises during installation and commissioning

Advantages at a glance

- Time and cost savings. By involving SICK experts at an early phase, compliance with the directives and laws can be planned as an integral part of a project.
- Potential weakspots are identified early so that the necessary measures can be implemented during an early project phase.
- Everything from a single source!

Note

Please ask your SICK representative which service is available in your country.

Conceptional design of safety-related control circuits and selection of suitable components

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Scope of services

Hardware planning using CAD in accordance both with the specification and also with relevant regulations and directives, including

- Technical clarification
- Selection of suitable components
- Preparation of circuit diagrams
- Terminal diagrams
- Layout diagrams (control cabinet)
- Parts lists
- Documentation in electronic format

Advantages at a glance

- Cost savings due to more efficient project implementation
- Optimal matching of different technologies

Note

Please ask your SICK representative which service is available in your country.

Further information	Page
→ Verification & Optimization	B-13
→ Training & Education	B-24

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

High-quality and reliable programming of safety-related control circuits

Scope of services

- Preparation of the software program or configuration based on the existing safety concept
- Preparation of the data exchange with other communication modules
- The range of services includes technical clarification, preparation of a user document, system specification, software check, comments, allocation table, cross-reference list, final review and documentation in electronic format
- From the planning phase to commissioning of the customer-specific hardware and software, all work is performed in accordance with strict configuration guidelines. Each phase is clearly described. Projects are implemented based on the V-model

Advantages at a glance

- Protection of workers and machines in compliance with standards and regulations
- Cost savings: Efficient project implementation minimizes the risk of productivity restrictions

Note

Please ask your SICK representative which service is available in your country.

Pre-assembly of components and equipment

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Scope of services

Installation in accordance with specifications, including

- Complete wiring of all AOPDs, proximity switches, valves, motors, emergency switching off/emergency stop push-buttons and mechanical interlocking devices, etc.
- Layout of all connection cables (cabinet-terminal box)
- Wiring test

Advantages at a glance

- Cost savings: Minimizing of the risk of productivity restrictions
- Time savings: Reduction in employee pressure and fast project implementation

Note

Please ask your SICK representative which service is available in your country.

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Commissioning safety-related control circuits with subsequent commissioning check

Scope of services

Commissioning of all safety-related machine functions in accordance with the specification including

- AOPD configuration and adaption of the protective and warning fields

- Interface communication
- Proximity switches, valves, drives, emergency switching off/emergency stop and mechanical interlocks, etc.
- Final safety inspection

Advantages at a glance

- Protection of workers and machines ensured by means of compliance with standards and regulations
- Cost savings: Minimizing of the risk of productivity restrictions
- Time savings: Reduction in employee pressure
- Avoidance of safety flaws and proof of due diligence by using a second set of eyes

Note

Please ask your SICK representative which service is available in your country.

SIL and PL: new demands from new standards

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Scope of services

Validation of the safety-related parts of the control system in relation to the requirements on the safety functions and on the safety integrity, which includes:

- Check the software concept
- Check the hardware concept
- Mismatches between expected and actual results (SIL, Performance Level or category)
- Installation and commissioning check on-site (option)

Advantages at a glance

- Avoidance of over-sizing - effectiveness and competitiveness safeguarded
- Cost savings: efficient use of expert knowledge
- Avoidance of safety flaws and proof of due diligence by using a second set of eyes

Note

Please ask your SICK representative which service is available in your country.

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

We guide you through the worldwide "jungle" of standards

Scope of services

- CE on-site review on the machine
- Check the essential hazards in relation to the manufacturer's risk assessment
- Check all electrical, pneumatic, hydraulic safety-related control equipment
- Check essential health and safety requirements
- Check the documentation
- Check the complete machine documentation (design documentation, risk analysis, etc.)
- Certificate of conformity

Advantages at a glance

- Independent CE-conformance check to prevent liability risks
- Cost savings: efficient use of expert knowledge

Note

Please ask your SICK representative which service is available in your country.

"Safety" as an integral part of the buying process

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

Scope of services

Co-ordination and implementation of all necessary activities to safeguard the requirements for CE marking

- Preparation of a risk assessment in accordance with EN ISO 12100 and ISO 14121
- Preparation of a safety concept (or: assessment of a proposal)

- Check the documentation on individual sub-systems
- Compilation of the technical design documentation
- CE-conformance check
- Preparation of the declaration of conformity

Advantages at a glance

- Increase in machine safety; compliance with the EHSRS and EN standards
- Risk reduction - SICK acts as a "supervisor" in the context of the Machinery Directive
- Time and cost savings: By involving SICK experts at an early phase, compliance with the directives and laws can be planned as an integral part of a project.
- Avoidance of over-sizing - effectiveness and competitiveness safeguarded

Note

Please ask your SICK representative which service is available in your country.

B

- Time savings - early recognition of potential weak points
- Cost savings - efficient use of expert knowledge
- Assurance of efficiency and competitiveness

A contribution to your company's safety culture

Scope of services

- Appraisal of the safety-related status of all equipment in a manufacturing plant in relation to the development of an appropriate safety strategy
- Analysis of the current compliance status of the systems based on general data, technical data and safety data

Advantages at a glance

- Quick scan to determine the current safety status of the machinery
- Identification of the most important safety aspects
- Assistance with the organization of the future approach in relation to safety
- Conformity with legal and official obligations and responsibilities of the operating organization
- Planning tools for collaboration with health and safety authorities

Note

Please ask your SICK representative which service is available in your country.

Decades of experience to protect your employees

Scope of services

- Compliance with applicable safety standards and regulations
- Determination of the health and safety aspects of the protective device for the protection of mechanical hazards on machinery and systems
- Determination of the correct installation and function of the device
- Check on the effectiveness of the protective device according to the current usage of the machine
- Integration of the protective device in the control system down to signal transfer in accordance with the required category as per safety standards
- Correct interaction with the combined protective devices
- Introduction to SICK device functions for the operator

Advantages at a glance

- Assurance of safety and component availability
- Supplement to the machine documentation in relation to compliance with machine safety by means of a safety report
- Quick identification of the safety status of the machine by the means of the SICK inspection seal
- High-quality inspection by an accredited inspection body in accordance with DIN EN ISO/IEC 17020 (DAT-I-003/01)
- Quick familiarity with SICK protective devices

Main test areas

- Does the SICK safety device function in line with the current use of the machine?
- Does the type of SICK safety device correspond with the hazards actually encountered?
- Does the SICK safety device correspond with the type required according to IEC 61496?
- Does integration of the SICK safety device, up to output signal transfer to the control system, correspond with the category complying with international safety standards?
- Is it impossible to bypass the SICK safety device?

B

- Comply with current safety standards
- Reduce responsibility
- Maintain safety levels, availability and ongoing production

Test documentation

- The SICK test seal will be attached if the test is successful.
- A test report supplements your machine documentation regarding compliance with machine safety requirements.

B

Safety seal for presses

Safety seal for power-driven machinery

Preconditions

- The devices are assembled, ready for operation and accessible.
- The machine documentation must be available as it is part of the inspection.
- The machine operator must be available for the duration of the measurement, to set up system-specific operations and to start the system.
- The machine stoptime is required in order to determine the safety distance for the protective device. This can be made available in written form. Alternatively, we can offer "stoptime measurement" as a separate service.

Periodic inspection with a service contract

Unforeseen events can be reduced to a minimum by regular safety inspections following prior arrangement with you. Inspections can be performed for an entire production site, if desired.

Take advantage of the following additional benefits:

- Less organizational effort through agreed upon appointments and monitoring of the inspections
- Benefit of scheduled machine downtimes for the measurements and inspections
- Priority aid in case of faults

We would be happy to discuss the options available for your production site.

The individual safety check - determine the safety status of your machines and plant

Scope of services

Safety inspection that includes:

- Check all guards are aligned properly
- Disconnection of hydraulic and pneumatic energy sources to check expected response
- Function check on all guards, emergency stop/emergency switching off and other safety features
- Check whether all dangerous movements are stopped as required
- Check the correct installation and function of the AOPD
- Check the effectiveness of the protective device according to the current usage of the machine
- Correct interaction with combined protective devices

Advantages at a glance

- Quick overview to determine the safety status of the machine
- Basis for compliance with the requirements as per directives on work equipment
- Monitoring inspection cycles as part of service contracts
- High-quality inspection by an accredited inspection body in accordance with DIN EN ISO/IEC 17020 (DAT-I-003/01)

"The invisible hazard" - inspection to protect against electrical risks

B

- Comply with current safety standards
- Reduce responsibility
- Maintain safety levels, availability and ongoing production

Scope of services

Determination of correct function of the protective bonding circuit as per the requirements of IEC 60204-1.

- Confirmation of minimum cross-section and designation of protective conductors
- Protection against direct contact
- Protection against residual voltages of active components
- Confirmation of the connections of the protective bonding circuit

- Compliance with the required limits for insulation resistances/residual currents
- Voltage test
- Determination whether the transfer resistances exceed the permitted tolerance band
- Measuring method without complex interruption of existing cables

Advantages at a glance

- Guaranteed quality of the measurement through approved measuring devices and reproducible documentation
- Preparation of a measurement report for machine documentation
- Identify hazards due to electric shock early on
- Increased safety, availability and productivity
- High-quality inspection by an accredited inspection body in accordance with DIN EN ISO/IEC 17020 (DAT-I-003/01)
- Compliance with the applicable safety standards

Note

Please ask your SICK representative which service is available in your country.

B

- Comply with current safety standards
- Reduce responsibility
- Maintain safety levels, availability and ongoing production

Cause analyses for accidents and incidents

Scope of services

A. Basic check

- Assessment of the equipment to be checked
- Determination of the primary cause of the accident and underlying aspects that triggered the accident
- Analysis of the equipment, drawings, operation and safety-related control measures; Proposals for solutions to prevent a repetition of the event

B. Additional detail check

- Detailed analysis of the equipment to be checked
- Implementation of a safety inspection to determine the exact cause of the accident
- Complete risk assessment, based on an evaluation of the hazards
- Final document on the investigative file

Advantages at a glance

- Independent review of an incident/accident at a machine
- Assurance that the cause of an accident/incident is completely checked and measures are initiated to prevent a repetition of the event

Note

Please ask your SICK representative which service is available in your country.

Accredited methods ensure high quality and reproducible results

B

- Comply with current safety standards
- Reduce responsibility
- Maintain safety levels, availability and ongoing production

Scope of services

- Measurements of ten typical dangerous movements on a machine and determination of the current stopping/run-down time
- Calculation of the correct safety distance from the hazard point to the protective device in accordance with the principles in the type C standard or international standards

Advantages at a glance

- Ensured quality of the measurement through approved measuring devices and reproducible documentation
- Attachment of a label with the key data directly to the machine
- Preparation of a measurement report for the machine documentation
- High-quality inspection by an accredited inspection body in accordance with DIN EN ISO/IEC 17020 (DAT-I-003/01)
- Definition of dangerous risks

Documentation

- A measurement report will be provided for your machine documentation.
- A label with the measurement data is attached directly to the machine.

Service	Remark	Part number
Stoptime measurement	For each dangerous movement of the machine	1681946

The new directive for noise exposure - increased requirements for the user

Scope of services

- Machine noise survey in relation to the requirements of the Machinery Directive
- Determination of the A-weighted equivalent continuous pressure level at the workplaces
- Determination of the peak of the instantaneous C-weighted sound pressure at the workplaces
- Measurement in accordance with the relevant standards such as EN ISO 3746, EN ISO 11202

Advantages at a glance

- Independent measurements undertaken by a third party to avoid consequential costs in the event of failure to comply with directives
- Assurance of compliance with the requirements of standards and regulations

Note

Please ask your SICK representative which service is available in your country.

B

B

- Train employees
- Strengthen investment decisions
- Gain a competitive advantage

Expertise - practical and competent

Scope of services

- Essential information on relevant regulations regarding machine safety
- Standard-orientated selection of suitable safety devices, integration of safety equipment in the general control system
- Correct assessment of safety procedures based upon currently applicable directives, standards and legislation/regulations
- Target group-oriented courses
- High qualified trainers and external speakers
- Structured and participant-oriented training documents

Advantages at a glance

- Confidence in decision-making through clarity of relevant rules, regulations and application specifications
- Increased levels of competence through ongoing staff training
- Keeping technology in focus so that the right investment decisions are made in the future

Note

Please ask your SICK representative which service is available in your country.

Applications

Products and complete solutions for effective operator protection, accident protection and collision prevention

C

Solutions from SICK – we always have an eye on the big picture!

Today, standards and regulations often require the use of safety technology. Our goal is to create a solution that does not interfere with the production process, but rather optimizes it –

whether it is an individual solution or an integrated safety concept with high diagnostic capabilities.

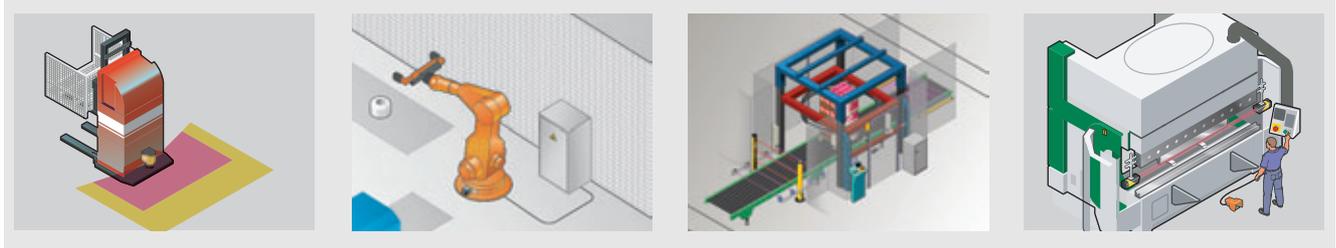

Think about tomorrow, today!

SICK stands for expertise gained in the field. Our knowledge of many machines and systems enables customized solutions that will also satisfy your future requirements!

mounting must be adapted to the specific application and site requirements.

The examples shown on the following pages illustrate application solutions. Device selection, integration and

Hazardous point protection on a press for an automobile supplier

Application overview

Task	Hazardous point protection
Industrial sector	Automotive and other vehicles
Application location/machine type	Presses
Product family	C4000 Eco, Flexi Soft, T4000 Direct, ES21
Type of controller	Flexi Soft

Application in detail

Task

Workers need to reach into a press, which presses gear wheels onto gear axles in order to fit the gear wheel on the axle. The press must therefore be stopped when they reach inside.

Solution

The hazardous point is protected with a C4000 safety light curtain combined with a modular Flexi Soft safety controller. The gear axles are automatically fed into the press on carriers. An IQ40 inductive proximity sensor detects the carrier and triggers a stop signal for the transport system and a signal for exact positioning. The press works in a single break mode – the worker fits the gear wheel onto the axle. When doing this, he breaks the protective field of the light curtain. As soon as he

leaves the field, the machine cycle is automatically started.

The two doors to the carrier inlet and outlet are protected with T4000 Direct transponder safety switches. Opening one of the doors triggers a stop command for the dangerous movement of the press. All press control signals, such as top dead center (TDC), bottom dead center (BDC) and over-travel monitoring, as well as the door protection signals and the ES21 emergency stop pushbutton, are evaluated by the Flexi Soft safety controller. A reset button is required to initially start the machine, to reset the restart interlock if the protective field is broken during a dangerous movement or the monitoring time of 30 s has been exceeded.

Customer benefits

- Reliable protection for workers
- Minimal press downtime

Monitoring of a lateral chain conveyor in a sawmill

Application overview

Task	Hazardous point protection
Industrial sector	Wood
Application location/machine type	Sawmill
Product family	C4000 Fusion, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

In a sawmill, lumber is transported away from the sawing line on a conveyor system with a sequence of lateral chain conveyors. Because the sawn planks can slide over one another during transportation and those with various defects have to be turned and positioned, they need to be separated and/or aligned by employees at certain points. To do this, the person has to reach directly into the hazardous area of the conveyor system. This requires electro-sensitive protective equipment, which allows access but reliably detects entry into the hazardous area and shuts down the lateral chain conveyor.

Solution

With the C4000 Fusion, a solution has been found that reliably detects access to the conveyor system but enables an employee to intervene as required for the process without the transport system being stopped. To achieve this, a reduced resolu-

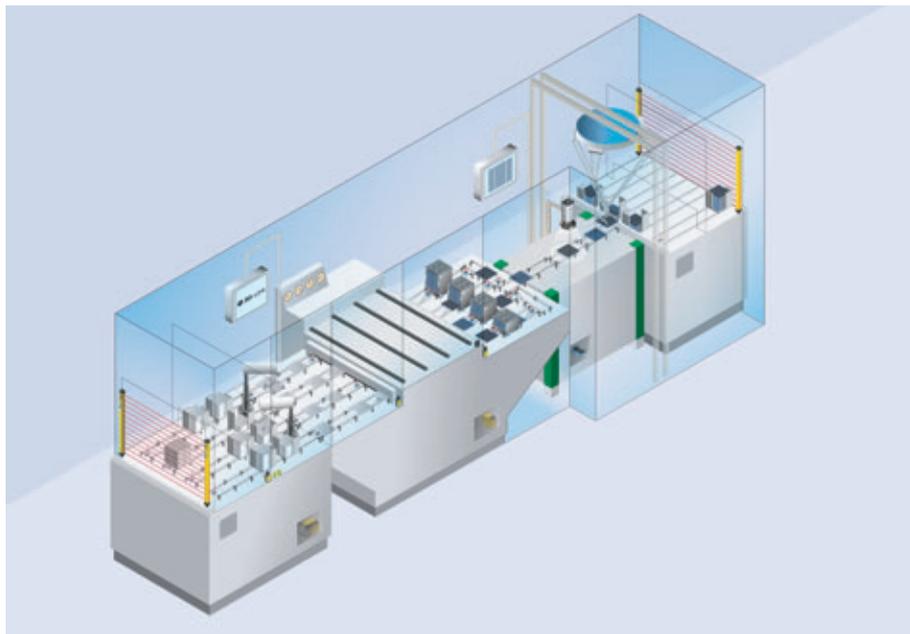

tion of 240 mm has been specified – this corresponds to the clothed arm of the machine operator or a multiple of the thickness of a plank, so that the plank can also be removed through the active protective field if required without stopping the conveyor system. The multiscan function uses an increase in the scanning rate and intelligent evaluation of the scanning results to enable differentiation of an arm and a wood chip. This ensures reliable and safe monitoring of the chain beds despite the large amount of dust produced in the cutting process.

Customer benefits

The C4000 Fusion is an EN 61496 type 4 and IEC 61508 SIL3 compliant protective device for sawmills and for wood working and processing plants that is largely independent of its surroundings, guaranteeing both maximum safety and optimum availability.

Protection of the handling area on a solar cell classification machine

C

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Hazardous point protection
Industrial sector	Electronics, (electrical) precision engineering, optics
Application location/machine type	Solar
Product family	miniTwin4, Flexi Classic, ES21, i14 Lock, i12S, RE13
Type of controller	Flexi Classic

Application in detail

Task

The hazardous point in the handling area of an input/output sorting station for solar cell boxes must be protected so that workers are not injured if they need to reach inside as part of the process. Easy integration of safety sensors is required. The installation conditions on site are generally very tight.

Solution

The miniTwin safety light curtain is ideal here. It is integrated into the plant control system using the modular Flexi Classic safety controller. The slim shape of the miniTwin allows it to be easily installed between the machine frame and housing, reliably protecting the hazardous point. The door is protected by the i12S safety switch, while the locking of the cover in the robot

handling area is monitored by the i14 Lock safety locking device. If a safety controller is not required, the function can be performed by a simple safety relay. Other safety-related sensors, such as an ES21 emergency stop pushbutton and RE13 magnetic safety switches, are located in the overall solar cell production plant.

Customer benefits

A major advantage is the networking of the safety sensors with the overall plant. The miniTwin safety light curtain is a key highlight, as its slim shape allows integration with optimum use of space. The miniTwin can be installed right into the corners of the machine, which means that there are no blind spots. A reduced range of variants and storage brings additional time and cost savings.

U-shaped hazardous point protection to improve ergonomics

Application overview

Task	Hazardous point protection
Industrial sector	Automotive and other vehicles
Application location/machine type	Production line
Product family	miniTwin4, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

In the course of productivity optimization, ergonomic workstation design is becoming increasingly important. Semi-automatic production lines in particular are meeting the requirement of efficiently manufacturing rapidly decreasing batch sizes. Safety sensors need to be adapted to the design requirements brought on by these changes. In addition to this, the required integration of the sensor into the machine should increase protection against mechanical stress. The increasing use of more openly accessible designs such as the C frame allows quick access to materials. This not only leads to the use of the smallest machine dimensions possible, but also places new demands on safety light curtains. Short safety distances and flexible adjustment of the protective field must be realized. As well as in installation and commissioning, there is further potential for savings in warehouse management and order processing.

Solution

Thanks to its unique small size, the miniTwin4 safety light curtain can be adapted to individual machine designs. The miniTwin4 is designed in such a way that its protective field ensures short safety

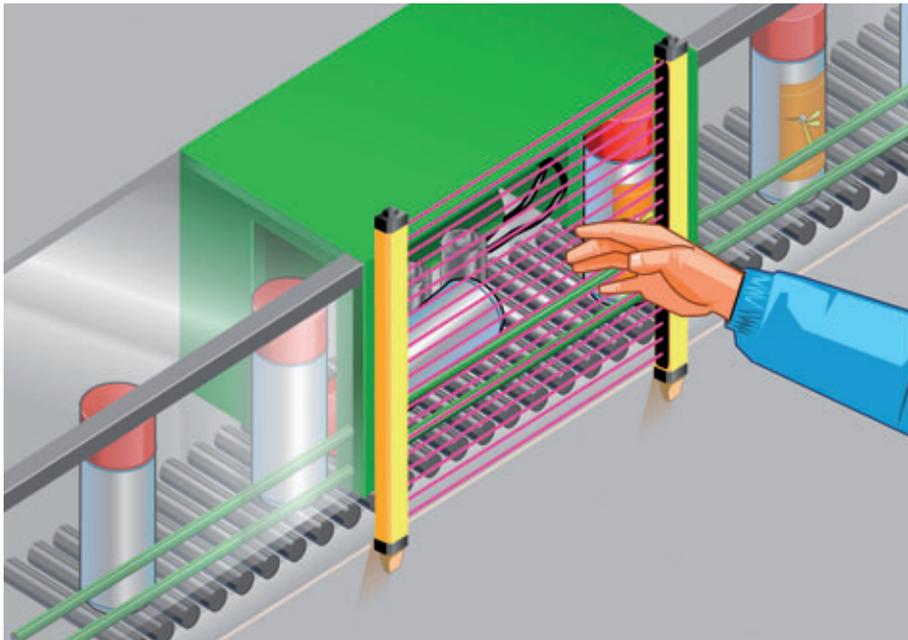

distances even in critical corner positions. The standard brackets allow simple mounting without special tools, even on standard profiles. The automatic self-configuration replaces the need for configuration tools and explanations on how to use them during commissioning. For the first time, the accessory has been integrated into the type code as part of the product.

Customer benefits

Ergonomically optimized machine access achieved via U-shaped protection is a prerequisite for maximum machine productivity. The miniaturization follows the trend for more compact machines intended to optimize usage of valuable production space. The high resolution, even in corner areas, together with the quick response time, means that for the first time, light curtain integration is technically sound, simple and affordable. Brackets suitable for standard profiles offer an alternative to in-house construction that ties up your resources. The concept of the unit stick reduces the number of system components, thus reducing the costs of the ordering, service and logistics processes. Administration costs for accessory parts are further reduced by ordering the accessory using the material number of the stick.

Protection of a labeling machine

Application overview

Task	Hazardous point protection
Industrial sector	Packaging, pharmaceutical / medical, food & beverage
Application location/machine type	Labeling plant
Safety functions	Safety-related stop function, integration of safe automation and control system in same network
Product family	C2000 Eco, Flexi Classic, ES21
Type of controller	Flexi Classic

Application in detail

Task

A labeling plant with automatic feed automatically sticks labels onto plastic containers. Within the plant, the process area needs to be protected so that the machine can be accessed quickly in case of a fault. During operation, the visual inspection by the operating personnel requires the construction to be as open as possible.

Solution

The labeling plant is protected by a C2000 safety light curtain. In conjunction with a

Flexi Classic safety controller and an ES21 emergency stop pushbutton, the machine has a full range of safety features.

Customer benefits

Compared to separating protective mechanisms, light curtains allow the plant to be accessed much more quickly in case of faults. Minimizing downtime has a positive effect on the throughput of the entire plant. The clear view of the process area provides ergonomic benefits for operating personnel.

Hazardous point protection on a semi-automatic assembly station

Application overview

Task	Hazardous point protection
Industrial sector	Assembly, handling, robotics, automation
Application location/machine type	Assembly station
Safety functions	Safety-related stop function, tool/machine protection
Product family	V300 Work Station Extended, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

In an assembly cell, miniature robots work on final assembly of small electronic components such as mobile telephones, PDAs, memory sticks, etc. This hazardous point must be protected as workers insert and remove parts. They could be injured by the robot during this activity. The operator required a modular configuration matching the machine design. The assembly cells can be up to 1.5 m wide.

Solution

The requirements were met with a V300 Work Station Extended safety camera system. It is placed in one of the corners of the assembly cell profile so that it does not interfere with the actual process. A reflector strip that can be individually adapted to

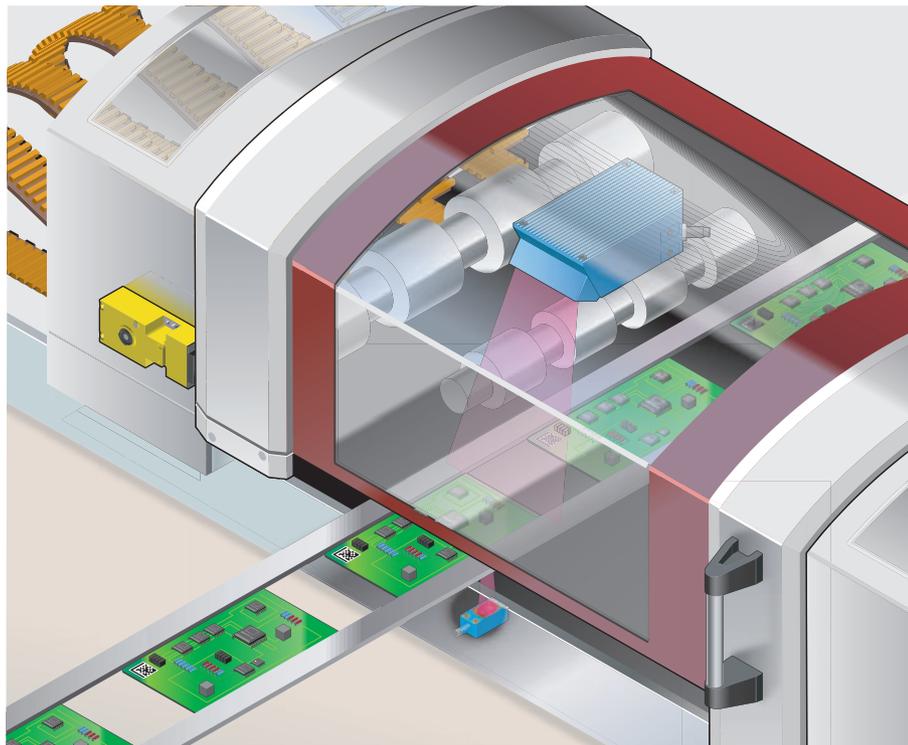

the shape is stuck onto the profile frame, making it almost invisible. Depending on the functionality, the V300 Work Station Extended is connected to a simple safety relay or a complete safety controller. A stop signal is generated if a person reaches into the protective field.

Customer benefits

The V300 Work Station Extended is universally compatible with different openings, which makes storage and planning considerably easier. Only one component is required instead of two, minimizing installation and cabling work. The intuitive operation using a simple teach-in button does not require additional software or expert knowledge.

Protection of the sliding door on an automatic placement machine

C

- SICK is continually publishing examples of application solutions on the Internet ([→ www.sick.com](http://www.sick.com)).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Hazardous point protection
Industrial sector	Automotive and other vehicles, electronics, (electrical) precision engineering, optics
Application location/machine type	Automatic assembly machines
Product family	i14 Lock, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

Pre-assembled circuit boards are fed to an automatic placement machine in the automotive supply industry. Opening of the sliding door must be controlled so that the dangerous movement is stopped before the door can be opened.

Solution

An i14 Lock safety locking device secures the sliding door to the automatic place-

ment machine. A stop button has to be pressed to open the door.

When the dangerous movement of the machine is stopped, the magnet operating voltage is applied, which then releases the locking magnet of the safety locking device and allows the door to be opened.

The safety signals are evaluated by the modular Flexi Classic safety controller.

Customer benefits

Maximum safety is ensured without stopping production due to opening the door at the wrong time.

Door and fall-through protection on a sealing, cutting and labeling unit in the meat processing industry

Application overview

Task	Hazardous point protection
Industrial sector	Food & beverage, packaging
Application location/machine type	Door and gate
Product family	C2000 Standard in IP69K Housing, ES21, i16S, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

The mincer's meat feed funnel and the door to a sealing, cutting and labeling unit for meat products must be protected. Machines and equipment in the meat processing industry are subject to special requirements such as cold and mandatory cleaning cycles with caustic chemicals.

Solution

These requirements can be met with the C2000 Standard in IP69K Housing safety light curtain and the i16S safety switch combined with the Flexi Classic safety controller. When the protective device is deliberately opened, the NC contacts on the safety switch are opened and the dangerous machine movement is stopped. The i16S safety switch has been developed for harsh everyday industrial use. The

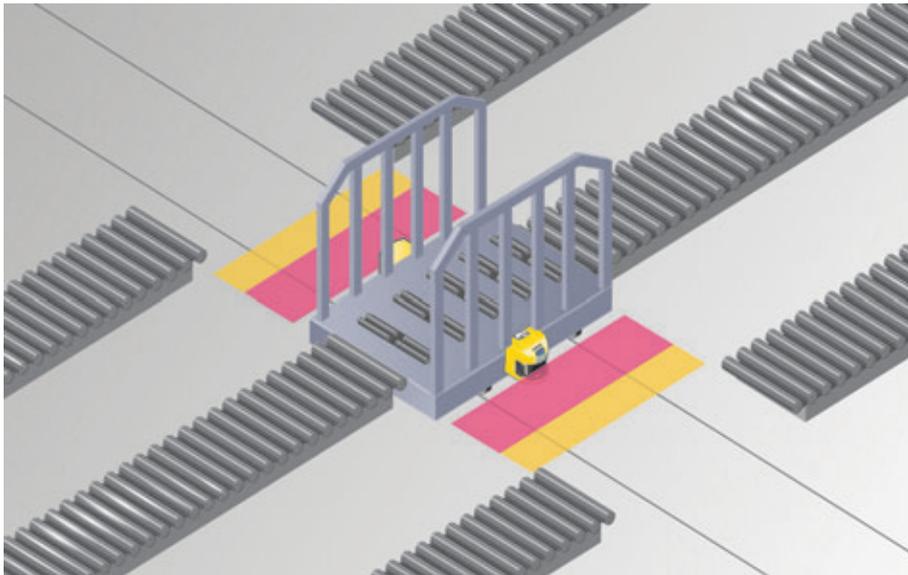

housing is made of glass fiber reinforced thermoplastic. The safety switches have an increased locking force and flexible actuators, making them ideally suited for the requirements of meat processing.

Customer benefits

The robust construction of the switch keeps downtime to a minimum. The increased locking force of the safety switch ensures that the door remains closed when vibrations or shocks occur and the machine continues running with no interruption. The extremely flexible actuators and the safety switch alignment aid fitted guarantee that the doors can easily be closed even with distortion. Maintenance work and downtime for the unit are significantly reduced.

Hazardous area protection on a traversing bogie

C

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Hazardous area protection
Industrial sector	Storage and conveyor technology
Application location/machine type	Conveyor belts
Safety functions	Safety-related stop function
Product family	S3000 Professional

Application in detail

Task

On a horizontal conveyor system, goods are transported back and forth between processing lines using a sliding carriage. Because people can cross the path of the sliding carriage, the carriage must be protected.

Solution

The sliding carriage is protected using two S3000 safety laser scanners that are attached in the two directions of travel. If a person or an object is detected by the warning field on the S3000, the sliding car-

riage slows down. If a person or an object enters the protective field, the carriage stops. Depending on the direction and speed, the protective fields are dynamically adapted by using incremental encoders.

Customer benefits

People can move freely in the hazardous areas, no mechanical protection is necessary.

Protecting an automated guided vehicle with two protecting cases

Application overview

Task	Hazardous area protection
Industrial sector	Storage and conveyor technology, transport, traffic, logistics
Application location/machine type	Driverless transport systems
Safety functions	Monitoring safe speed/velocity, safety-related stop function, tool/machine protection
Product family	S300 Professional

Application in detail

Task

Small, extremely low vehicles transport pallets from one storage area to the next. During this process, a collision with people or material must be prevented.

Two protecting cases are required. In one case moving the vehicle in all four directions, and in the other case only straight ahead and also around tight bends. The vehicles also move along tight corridors such that there is no space for bumpers.

Implementation

The ideal solution for the protection of people and prevention of collisions was provided by the S300 safety laser scanner.

Two very compact devices, hardly larger than coffee cups, are mounted opposite each other on two edges for all-round protection. Each scanner has a scanning angle of 270° so that the vehicle is protected on all sides. On vehicles driving straight ahead and around bends, two scanners are fitted to the front edge and reliably detect obstacles on bends.

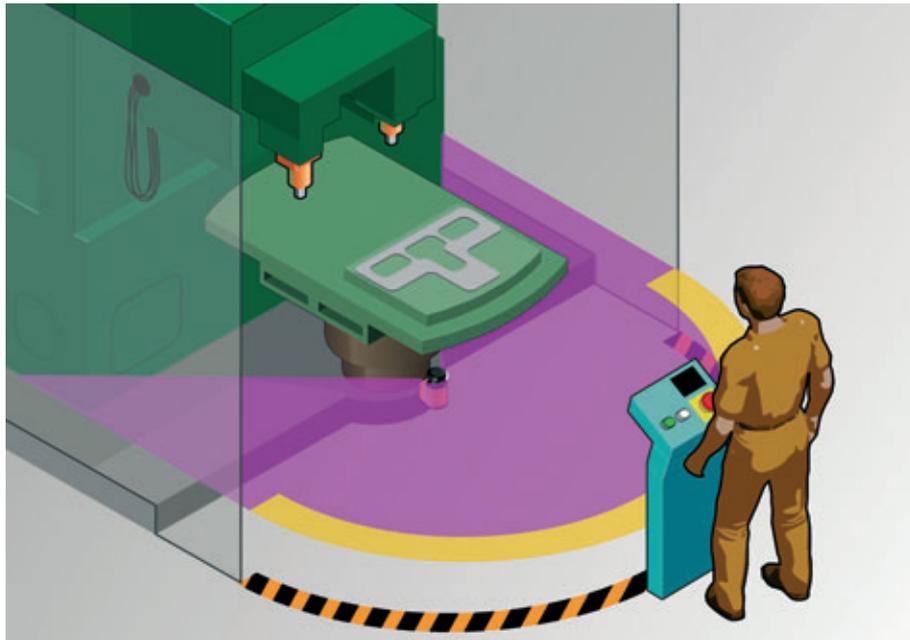

Up to four field sets, each comprising a protective field/warning field are defined and saved so that when there is a change in the monitoring situation, it is possible to switch to a different field set. In this way hazardous areas are monitored differently at varying velocities. Warning fields and protective fields are small when moving at low speeds; at higher speeds they become larger. If a person enters the warning field, the vehicle slows; if the person reaches the protective field, the vehicle stops. The same applies to obstacles that cross the route. A restart delay after a stop can be configured for a time from 2 to 60 seconds.

Customer benefits

Thanks to its 270° scanning angle, up to two scanners are used for all-round protection. Driving around tight bends is possible without problems due to the scanner's compact size. The dynamic adjustment of the scanner's field sets increases transport efficiency.

Hazardous area protection on a rotary table

C

- SICK is continually publishing examples of application solutions on the Internet ([→ www.sick.com](http://www.sick.com)).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Hazardous area protection
Industrial sector	Machine tool, automotive and other vehicles
Application location/machine type	Automatic machining centers
Safety functions	Safety-related stop function, prevention of unexpected start-up
Product family	S300 Standard, Flexi Classic, ES21
Type of controller	Flexi Classic

Application in detail

Task

A rotary table in component manufacturing must be protected against unauthorized access, as there is a considerable risk of injury due to the machine. A low-cost solution with little mounting effort was sought.

Implementation

The S300 safety laser scanner was selected. With its scanning angle of 270°, this device scans the entire area in front and at the side of the rotary table that can be entered by people. As a result, only one scanner is necessary, saving considerable costs and installation effort. The S300 switches the output signal switching devices to the OFF state when the protec-

tive field is interrupted. Via the Flexi Classic safety controller, the shutdown of the machine is initiated.

Customer benefits

The sensor scans the hazardous area with a protective field of up to 2 metres using a scanning angle of 270°. As a result one S300 is sufficient in this application to scan the entire hazardous area making light curtains or other additional sensors unnecessary. Installation effort and maintenance effort are reduced and costs saved. The ES21 emergency stop pushbutton and the S300 safety laser scanner are monitored by one Flexi Classic module only.

Hazardous area protection and collision prevention measurement on overhead conveyors

Application overview

Task	Hazardous area protection
Industrial sector	Transport, traffic, logistics, storage and conveyor technology
Application location/machine type	Conveyor belts
Safety functions	Monitoring safe speed/velocity, safety-related stop function, tool/machine protection
Product family	S300 Professional

Application in detail

Task

In large warehouses with overhead conveyor systems, people crossing under the conveyors must be protected. A second requirement is the avoiding of collision between the individual overhead conveyors, which are designed to be close together. The risk of possible collisions must be completely excluded.

Implementation

The S300 safety laser scanner of this application meets the requirements safely and reliably. With a scanning angle of 270°, the movement around 180° bends is not a

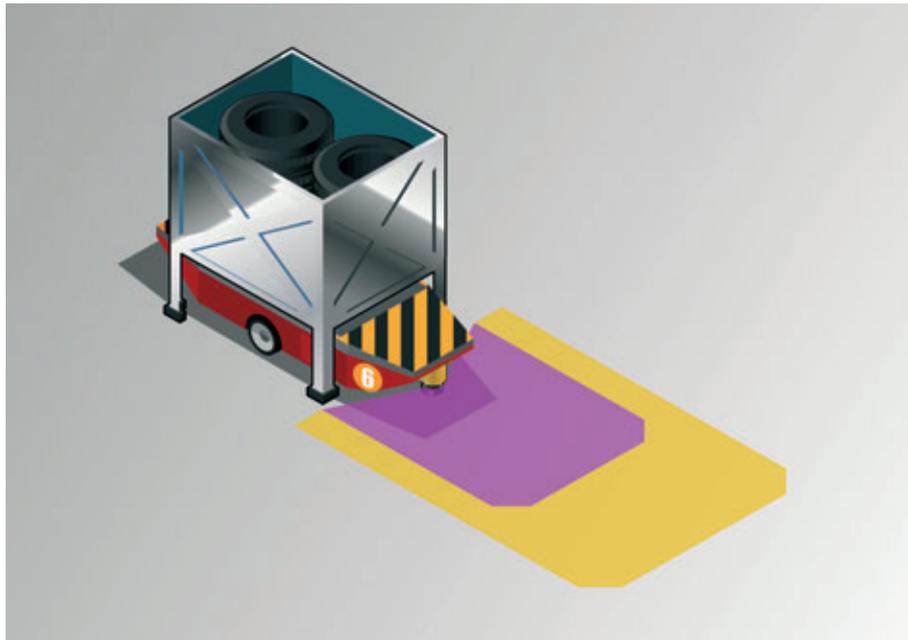

problem. If there is a person or an object in the movement area, the S300 ensures the suspended conveyor slows down and stops if necessary. The spacing is also always maintained safely using the warning field function. The warning fields and protective fields are switched as a function of the speed or conveyor route.

Customer benefits

Area protection, collision prevention and even protection on bends is very elegantly and cost effectively mastered with one device only.

Mobile hazardous area protection on a pick-up transport vehicle

C

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Hazardous area protection
Industrial sector	Automotive and other vehicles, storage and conveyor technology
Application location/machine type	Driverless transport systems
Safety functions	Monitoring safe speed/velocity, safety-related stop function, tool/machine protection
Product family	S300 Professional

Application in detail

Task

In tire manufacture, the tires are transported to a balancing check and back again using an automated guided vehicle system. The route is crossed by workers and there may be obstacles, as a result, that the vehicle must use a protective device.

Implementation

The S300 safety laser scanner is used for the protection of people and prevention of collisions. The very compact device, hardly larger than a coffee cup, is mounted in the direction of travel. Up to four field sets each comprising a protective field and warning field are configured so that with a change

in the monitoring situation, it is possible to switch to a different field set. In this way hazardous areas are monitored at varying speeds. If a person enters the warning field, the vehicle slows down; if the person reaches the protective field, the vehicle stops. The same applies to obstacles that cross the route. A restart delay after a stop can be configured for a time from 2 to 60 seconds.

Customer benefits

- Flexible solution in a highly automated environment
- Optimal adaptation to the situation
- Provides optimal protection for people and against collisions

Hazardous area and access protection of a robot cell

Application overview

Task	Hazardous area protection, Access protection
Industrial sector	Assembly, handling, robotics, automation
Application location/machine type	Robot station
Safety functions	Emergency stop function, safety-related stop function, reset/restart, control functions and operating mode selection, position monitoring
Product family	S3000 Standard, Flexi Soft, ES21, IN4000
Type of controller	Flexi Soft

Application in detail

Task

In two neighboring work cells, two robots independently place workpieces on pallets. The working areas of the robots are surrounded by fences. Access through two service doors is to be protected by safety switches. The safety switches stop the robot. Two emergency stop pushbuttons at the doors also stop the robots. The access for the fork lift truck is protected using laser scanners that interrupt the movement of the robots if one of protective fields they monitor is entered. An emergency stop pushbutton on each door as

well as on the entrance stop both robots. The monitoring devices are linked by a control unit that ensures both robots operate safely.

Implementation

The extremely flexible safety controller Flexi Soft meets these requirements. It secures the two robot working areas independent of each other. The S3000 safety laser scanner can also monitor a simultaneous protective field. Using its EFI function (Enhanced Function Interface), the Flexi

Further information	Page
→ S3000 Standard	D-19
→ Flexi Soft	O-25
→ ES21	M-2
→ IN4000	L-48
→ Services	B-0

Soft can evaluate the two protective fields independent of each other.

The Flexi Soft modular safety controller is configured using intuitive software with a graphical user interface. This makes it possible to design the application with complete flexibility.

The dual channel contacts on the emergency stop pushbuttons and safety switches are monitored for cross-circuits. It is possible to monitor (external device monitoring) the safety relays connected to the outputs.

By using extended sensor functions with an EFI interface, a second laser scanner is not necessary. An additional scanner would otherwise be required for monitoring an independent protective field for a second robot.

The circuit configuration can also be quickly modified and expanded at any time. This action can be undertaken easily with the aid of an intuitive function block-based logic editor. Addi-

tional devices such as a safety command device for safely setting up the system or safety locking devices can be easily connected using expansion modules. The Flexi Soft system can be expanded to up to 96 inputs and 48 outputs.

Customer benefits

- Usage of the expanded sensor functions by means of the EFI interface
- Modular construction: The control grows with the application
- Direct sensor connection
- Fast response times
- Space saving
- Logic configuration as required via software
- Optional diagnostics module
- Easy field bus connection via diagnostics modules

Access protection on a transfer route with differentiation between man and material

Application overview

Task	Access protection
Industrial sector	Automotive and other vehicles
Application location/machine type	Robot station
Safety functions	Differentiation between man and material (muting alternative), safety-related stop function
Product family	C4000 Fusion, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Problem

In automotive body production, unfinished car bodies are automatically transported into the dangerous area of a robot cell. If a person enters this area, the robot must be stopped immediately.

Solution

The C4000 Fusion safety light curtain, which features dynamic, self-teach muting, is used. The continuously active sensor is difficult to manipulate and thus provide maximum safety up to category 4. It automatically learns material patterns based on the size, distances and sequence

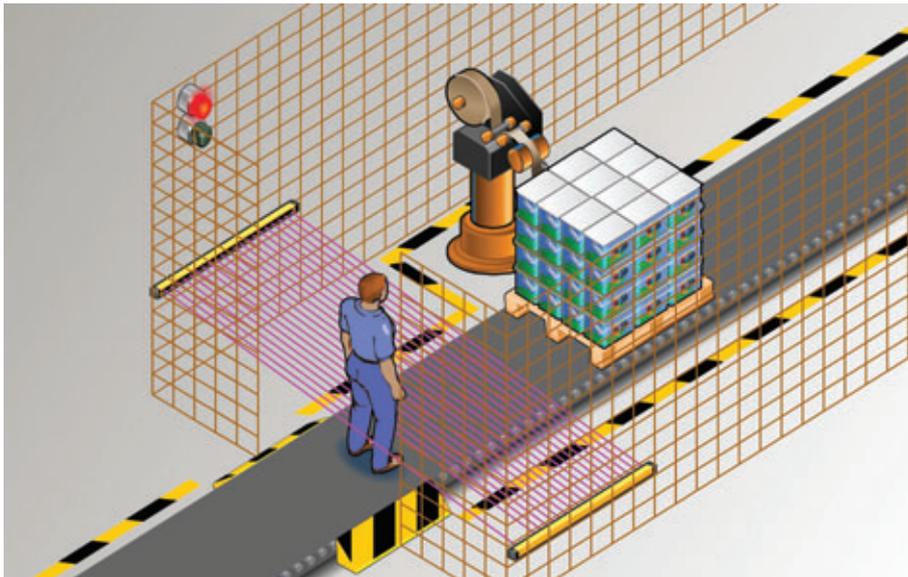

and monitors these patterns. Entry of persons results in an immediate shutdown. The protective field length of 900 mm ensures that it is not possible to unintentionally trigger the safety mechanism.

Customer benefits

An economical solution, as there is no need for additional sensors or additional protective measures such as muting sensors, muting lamps or swing doors. The compact sensor pair is insensitive to interference and offers maximum availability.

Further information	Page
→ C4000 Fusion	F-205

Access protection without muting with automatic detection of goods

- SICK is continually publishing examples of application solutions on the Internet ([→ www.sick.com](http://www.sick.com)).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Access protection
Industrial sector	Storage and conveyor technology, packaging
Application location/machine type	Palletizer
Safety functions	Safety-related stop function, differentiation between man and material (muting alternative)
Product family	C4000 Palletizer Standard, ES21, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

Wherever materials are transported automatically, there are dangerous areas such as robot stations, rotary tables, palletizers, feed mechanisms or strapping machines. These areas must be protected so that the machine stops if a person enters the hazardous area. In addition, the transport direction of the material can be detected.

Solution

The C4000 Palletizer Standard safety light curtain is the ideal solution for these requirements. It does not need any additional sensors or indicator lamps, and thus provides considerable benefits in terms of savings in planning, design, installation, connection and operational support service. The safety light curtain detects people entering dangerous areas on machines, but allows material to be transported into and out of these areas. The objects must fit into

the defined window (for goods detection, you configure a minimum and maximum object size of approx. 500 mm –maximum object size protective field –150 mm) and their size is then monitored precisely and automatically as they pass through. This enables the system to monitor and evaluate coverage of individual light beams and a minimum size. This automatic detection of packages without programming work provides maximum operating flexibility. The adjustment of muting sensors that is normally required when changing batches is completely eliminated.

Customer benefits

The C4000 Palletizer Standard is delivered with the "goods detection" feature already activated. Teach-in of a new pattern is carried out automatically during operation. The system can also process the signals from the transport unit. This enables the

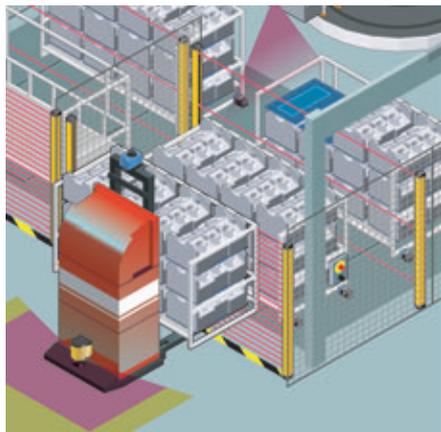

Further information	Page
→ C4000 Palletizer Standard	F-192
→ ES21	M-2
→ Flexi Classic	O-2
→ Services	B-0

transport direction of both the goods and the pallet to be detected. Integrated speed monitoring has a positive effect on the safety distance analysis. The C4000 Palletizer Standard also features gap suppression, which means that loose packages are detected as an entire

object. Reduced resolution allows loose strapping or protruding edges to be ignored. In addition, the reduction in components compared to muting solutions cuts the frequency of failure, significantly increasing system availability.

C

Protecting the loading and unloading station of a machining center

Application overview

Task	Access protection
Industrial sector	Machine tool
Application location/machine type	Panel dividing saws, edge-banding machine, machining center
Product family	C4000 Eco, ES21, Flexi Soft, M4000 Standard
Type of controller	Flexi Soft

Application in detail

Task

A loading and unloading station before the processing line must be protected so that the robot can load and unload pallets while people bring racks into the station or collect them. The gantry robot should only be stopped if a person approaches the critical area.

Solution

The protection is provided by C4000 safety light curtains and M4000 multiple light beam safety devices. They protect the loading and unloading station before the processing line against access by personnel. Both protective devices are connected together in a safety circuit. If an empty rack is brought into the station or a filled rack collected, the C4000 light curtain is inter-

rupted, in which case the M4000 takes over the protection function. During loading and unloading of the racks, the gantry robot can continue working. It is only stopped if the M4000 is tripped. Safety command devices such as an ES21 emergency stop pushbutton and reset button are mounted outside the hazardous area on the fence.

The safety devices are connected and evaluated using a Flexi Soft safety controller. Inductive proximity sensors (IQ40) report the presence of the racks in the stations.

Customer benefits

Connection of the sensors allows work to be performed efficiently in the loading and unloading station, which saves time and money.

Multiple protection of a robot cell

Application overview

Task	Access protection
Industrial sector	Automotive and other vehicles
Application location/machine type	Robot station
Product family	C4000 Standard, ES21, IN4000, S300 Standard, UE4470, UE4457
Type of controller	UE4457, UE4470

Application in detail

Task

A robot cell is used to manufacture modules for the automotive supply industry, in this case the casing for a fuel tank. It has a cover and base, i.e., the robot folds and crimps the parts together. While the robot is working, the cell must be protected so that the robot will be stopped if anyone enters the area.

Solution

The C4000 safety light curtain was chosen to protect the robot cell. However, as it is possible to "stand behind" this, additional safety features are required: two S300 safety laser scanners mounted diagonally provide the cell with comprehensive protection. On the robot, IN4000 safety switches monitor the movements of axes 1 and 2,

ensuring that people who are standing (unauthorized) behind or directly adjacent to the robot are protected. In front of the robot, an additional S300 safety laser scanner monitors the robot's working area. If a worker enters or passes through this area while the robot is operating, an emergency stop is triggered. All safety sensors, as well as the emergency stop pushbutton and signal generators, are connected to the UE4470 safety controller using UE4457 safety remote I/Os and with the robot controller using a safety network.

Customer benefits

The cabling in this application is significantly reduced. The simple programming of the UE4470 safety controller cuts the commissioning time, which saves money.

Access protection with different safety sensors

Application  Finder

C

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Access protection
Industrial sector	Automotive and other vehicles
Application location/machine type	Presses
Product family	ES21, L4000, M4000 Standard, Flexi Soft, WSU/WEU26-3
Type of controller	Flexi Soft

Application in detail

Task

During final moulding and profiling of "green tires", on which the road resistance is cut to reduce the burden on the environment, access to the presses must be protected so that the press can be stopped as soon as a person enters the area. In this case, the worker uses a mechanism to remove the tire from a truck and loads it into the negative mould of the press. The tire is pneumatically pressed against the mould and "cooked."

Solution

Access points to the presses are protected by three different safety sensors:

- M4000 multiple light beam safety device, fitted in device columns
- Two WSU/WEU26-3 single beam photoelectric safety switches, and
- Two L4000 single beam photoelectric safety switches

The M4000 and WSU/WEU26-3 are connected to a modular Flexi Soft safety controller, which evaluates the press control signals such as top dead center (TDC), bottom dead center (BDC) and overtravel monitoring. It also evaluates the signals from the foot switch and the ES21 emergency stop pushbutton.

Customer benefits

The combination of safety sensors with safety controllers and emergency stop pushbuttons provides comprehensive protection on this machine.

Protection of the flaps on a milling machine

Application overview

Task	Access protection
Industrial sector	Food & beverage
Application location/machine type	Mill work
Safety functions	Safety-related stop function
Product family	T4000, ES21, Flexi Classic
Type of controller	Flexi Classic

Application in detail

Task

In a spice mill, natural products such as stinging nettles, elder, various types of tea and mint are ground. For this purpose the products are added to a hopper from above, pass through the mill and are collected in a container. For the removal and addition of product to the mill, a pivoting flap must be opened. During this process, there is a considerable risk of injury if the mill is still running.

Initial protection measures involved the use of mechanical interlocks. These mechanisms failed after only a short time due to the harsh ambient conditions. The deposits from the natural products containing dust and resin on the actuators and in the switch housings caused significant machine downtime due to faults.

Solution

The T4000 safety sensor was used. This sensor uses an actuator, read head and evaluation unit.

The fixed code, battery-free actuator is fitted to the flap on the mill, the inductive read head to the mill housing.

In the closed state the actuator is in the read head field. Here the code is read continuously. As long as data transmission continues, the mill is in operation. When the flap is opened, the actuator is removed from the read head transmission field. The data communication is interrupted and the evaluation unit shuts down the mill. It is then safe to remove and add new product. After closing the pivoting flap, the mill is switched on again by pressing the reset button. In case of emergency the mill can be stopped immediately by the ES21 emergency stop pushbutton. The Flexi Classic modular safety controller handles the evaluation of the command devices and the non-contact safety switch.

Customer benefits

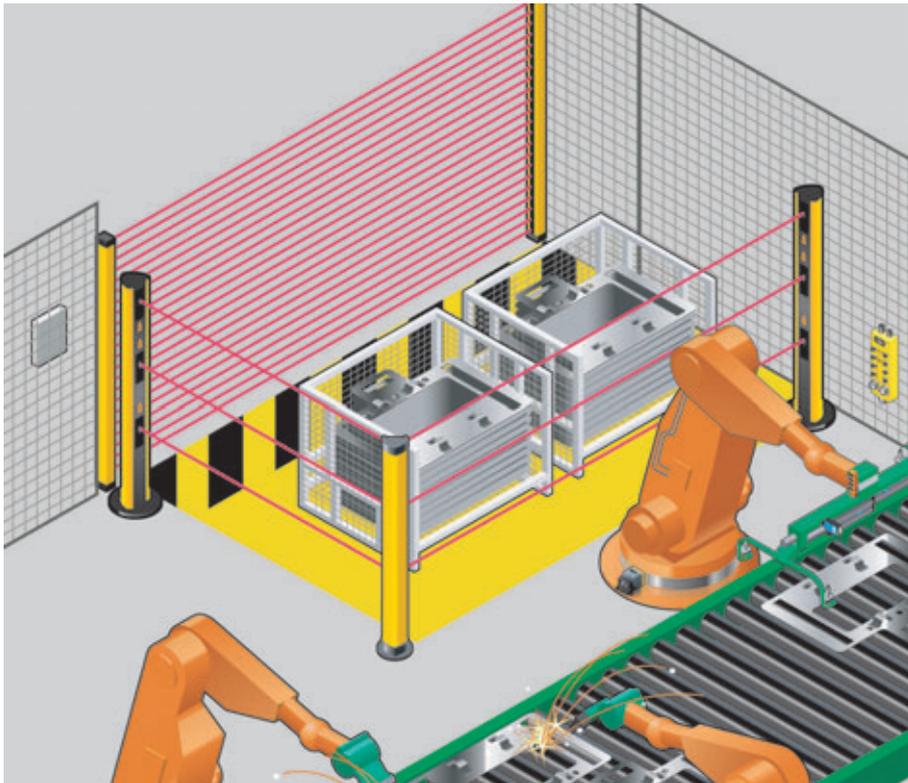

- Immune to contamination, the faults and machine downtime are reduced

Further information	Page
→ T4000	L-23
→ ES21	M-2
→ Flexi Classic	O-2

Safe functions in manufacturing – Material removal point in a rack station

C

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Application overview

Task	Access protection
Industrial sector	Machine tool
Application location/machine type	Rack station
Safety functions	Integration of safe automation and control system in same network, emergency stop function, safe position monitoring, safe gate function, safety-related stop function, reset/restart
Product family	UE4457, C4000 Standard, IN4000, ES21, M4000 Standard
Type of controller	UE4457

Application in detail

Task

In a rack station in front of a robot cell, the racks are often manually removed by a worker after filling. During this process, it must be ensured the robot stops if a person enters the cell. However, the robot is allowed to continue work at a different point during removal.

Implementation

The logic for the application is defined directly on site at the removal point by linking inputs and outputs on certified function

blocks in the UE4457 safety remote controller. The access area at the removal point is protected by a C4000 safety light curtain. An access request for the manual removal is triggered by the operator. The loading robot moves to its safe end position (monitored by an IN4000 non-contact safety switch), then the light curtain used as the outer protective device is muted and the operator can enter the hazardous area. The filled pallet can then be replaced. The non-contact safety switch is evaluated directly in the remote controller without any

Further information	Page
→ UE4457	P-32
→ C4000 Standard	F-29
→ IN4000	L-48
→ ES21	M-2
→ M4000 Standard	G-21
→ Services	B-0

further evaluation unit. The inside edge of the removal point is also protected on two sides with an M4000 multiple light beam safety device and a deflector mirror. This protective device is only active during pallet removal and enables the robot to continue working at a different point during removal.

After leaving the removal point, the access request is reset and acknowledged by the operator (reset and restart). The light curtain in the access area is re-activated and the multiple light beam safety device in the interior muted again; the robot can continue loading.

A control unit with access request, ES21 emergency stop push-button, a reset button, a restart button and indicators com-

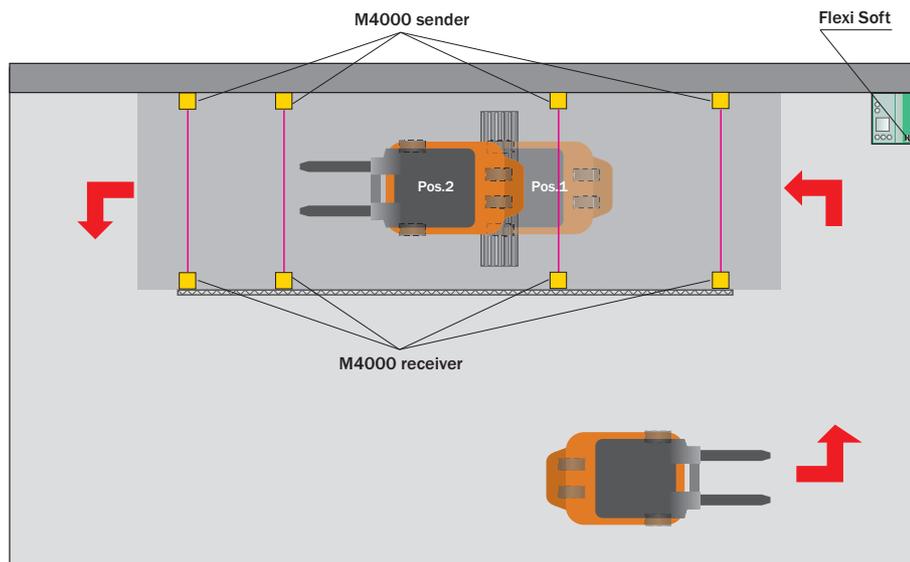

pletes the safety concept that is implemented directly in a UE4457 safety remote controller using de-centralized logic.

Customer benefits

The programmable safety system supports the automatic manufacturing process and provides optimal protection for the operator. The safety automation is simple and very fast due to the networking of the products. The wiring effort is minimized. De-centralized monitoring and diagnostics mean that the actions to be taken when the machine is at a standstill are straightforward.

C

Coordination of various safety sensors on a forklift truck test bench

Application overview

Task	Safety automation, access protection
Industrial sector	Storage and conveyor technology
Application location/machine type	Forklift truck rolling road
Safety functions	Emergency stop function, safety-related stop function, reset/restart, control functions and operating mode selection
Product family	ES21, Flexi Soft, M4000 Standard
Type of controller	Flexi Soft

Application in detail

Task

A manufacturer of industrial vehicles must protect a test bench for forklift trucks. The varying vehicle size, the sequential testing of the front and rear wheels, as well as the automatic and manual operating modes required made the installation of several M4000 multiple light beam safety devices necessary. A suitable controller is to take over the co-ordination of the electro-sensitive protective equipments as well as the two emergency stop pushbuttons and the reset button on the test bench.

Implementation

These functions are performed by the modular Flexi Soft safety controller. Due to extensive safety functions, e.g., emergency stop or reset, it is possible to flexibly and efficiently protect machines and systems with high safety requirements. The four operating modes, i.e., accessing and evaluating the signals from the four M4000, the two emergency stop pushbuttons and the

reset buttons are safely linked by the Flexi Soft using the operating mode selector switch. Two M4000 are installed in the entrance in front of the driven rollers and two more on the exit from the test stand. The test stand operator first moves the vehicles into the station by remote control. In this situation, operating mode 1, all M4000 are deactivated. When the non-driven front wheels reach the roller segment, only the M4000 in the immediate vicinity of the forklift truck are active, operating mode 2. When the driven axle is tested, all four M4000 are active, operating mode 3: The outer devices prevent unauthorized access; the inner devices shut down the test bench if the forklift truck jumps off the rollers. Along with automatic operating modes, it is also possible to operate the test stand manually (operating mode 4) - specifically for forklift trucks from other manufacturers. In this case when the operator actually drives the forklift truck onto the test bench, only the outer

- SICK is continually publishing examples of application solutions on the Internet (→ www.sick.com).
- The "Application Finder" will help you find additional solutions.

Further information	Page
→ ES21	M-2
→ Flexi Soft	O-25
→ M4000 Standard	G-21
→ Services	B-0

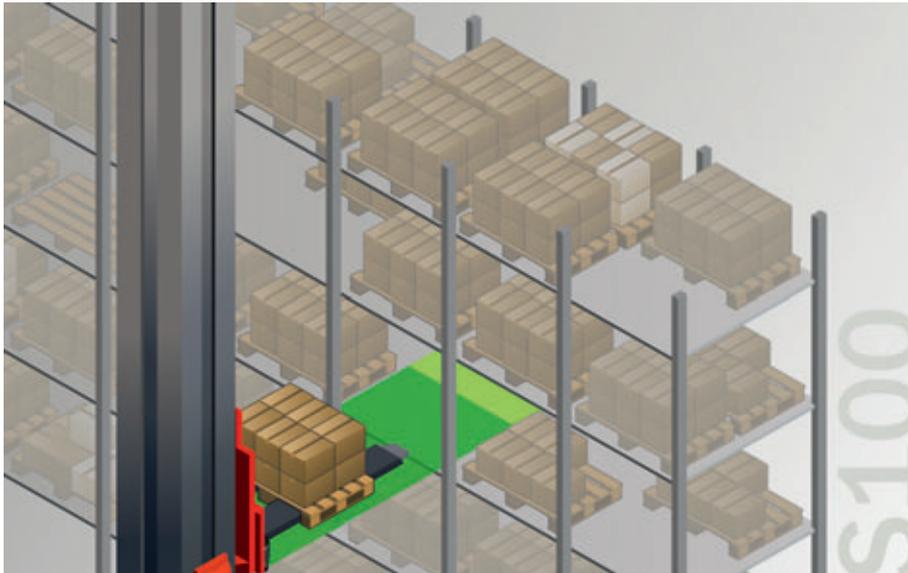

M4000 on the entry side is active, because the worker only has limited visibility to the rear during the test. In this way unauthorized access to the hazardous area by other people is prevented, the area in front of the forklift truck can be clearly seen by the operator.

Customer benefits

The Flexi Soft enables the signals from several items of ESPE to be processed simultaneously. Various operating modes can be configured with safety logic without extensive effort.

C

Bay monitoring and collision prevention using high-bay stackers

Application overview

Task	Collision prevention
Industrial sector	Storage and conveyor technology
Application location/machine type	High-bay warehouse
Product family	S100 Standard

Application in detail

Task

An automatic shelving storage and retrieval unit moves back and forth in a high-bay warehouse to store and retrieve material from shelf bays. Prior to storage, the space available in the shelf bay must be checked so that collisions are prevented between material to be stored and material already in the bay.

Implementation

An S100 laser scanner is fitted above or underneath the device for picking up loads on a shelving storage and retrieval unit; this unit is programmed such that its pro-

tective field scans all the space in the storage bay. Before the goods are stored, the S100 checks whether the storage bay is still empty. This check prevents goods already stored from being pushed out the other side and damaged. A dangerous situation could also arise in high-bay warehouses if goods fall to the floor.

Customer benefits

By using the laser scanner, the storage process is smoother, as collisions are prevented and goods protected against damage.

Collision prevention and hazardous area protection on automated guided vehicle

Application overview

Task	Collision prevention, hazardous area protection
Industrial sector	Storage and conveyor technology, transport, traffic, logistics
Application location/machine type	Warehouse/production area
Product family	S100 Standard, S300 Professional

Application in detail

Task

Automated guided vehicles that perform pallet handling in a high-bay warehouse are to be protected against collisions with objects that could be found on their route. These obstacles are not detected by the S300 Professional safety laser scanner for protecting people, because these are mounted at ground height.

Implementation

A mobile S100 laser scanner mounted to the vehicle scans a wide area in front of the AGV. It has a 2-dimensional scanning field pointing at a downward angle or moving up

and down. Collisions are prevented with hanging objects, protruding objects, or with the forks on other forklift trucks that could also pose a risk to personnel.

Customer benefits

The S100 laser scanner provides object detection and machine protection with a high level of flexibility. Because it is compact and lightweight, it permits quick, straightforward and optimal integration. Costs due to damage to the vehicle and material can be saved and the product life-cycle is increased.

Rear space monitoring on a forklift truck

Application overview

Task	Collision prevention
Industrial sector	Storage and conveyor technology, transport, traffic, logistics
Application location/machine type	Warehouse/production area
Product family	S100 Standard

Application in detail

Task

The space behind a forklift truck could pose many hazards. It is difficult for the driver to see and is therefore needs to be protected against collisions, which result in a reduction in the workload on the driver.

Implementation

The S100 laser scanner is mounted near the ground in the rear turning area on the forklift truck and monitors the area behind the forklift truck using two switching fields of different sizes. When traveling in

reverse, the approach of objects is signaled using two switching levels. The first level is a warning with, e.g., a yellow light; at the second level, movement is limited or stopped and a red light illuminates.

Customer benefits

Due to collision prevention, damage to the vehicle and goods can be avoided without impairing the driver's flexibility (driver assistance).

C

Safety laser scanners and laser scanners

Principle of operation of laser scanners

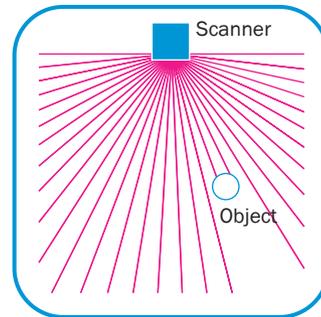

Laser scanners are compact systems that scan their surroundings with a beam ("optical radar"). If the emitted light pulses hit an object, the light is reflected and detected in the laser scanner's receiver. The time between the emission of a light pulse and the reception of the reflection represents the distance between the laser scanner and object (time-of-flight measurement). An internal rotating mirror "moves" the light pulses in a circle to produce 2-dimensional scanning.

Monitored areas can be defined within the field of view (scanning angle) and the device-specific scanning range of a laser scanner. If an object is detected in a monitored area, this situation is indicated by the laser scanner using 2 switching outputs (safe "stop" signal to the machine).

D

Laser scanner principle of operation

Fan-shaped scanning of the surroundings

Use of laser scanners

Laser scanners are used for area monitoring (hazardous area protection), hazardous point protection and access protection. A differentiation is made between:

- Stationary applications
 - Horizontal applications: e.g., pipe bending machines, machining centers, robot cells, press return area, etc.
 - Vertical applications: Entry/exit, hand protection

- Mobile applications
 - Monitoring the movement of AGVs (automated guided vehicles), narrow aisle stackers, etc.

Advantages of SICK safety laser scanners

Additional functions for plant and machine control

- Switchable monitored areas in accordance with the current process phase
- Monitoring external switching elements/contactors (EDM) saves costs and effort in machine control
- High-current outputs for directly operated switching elements (contactors), making conversion of the switching signals using relay interfaces, etc., unnecessary
- Measured data of the surroundings as well as reflector detection to support vehicle steering (AGV). Only one sensor for safety and control
- Integrated restart interlock (RES) minimizes the effort in the machine control
- Enhanced EFI with Flexi Soft controller - up to 4 scanners (2 x 2 host/guest)

Product range

- A very wide range of application requirements can be addressed with a compatible product family, thus minimizing stock-keeping and investment costs

Experience

- Proven in use
- The highest quality standards guarantee stable serial production
- Consultation and service expertise

Services for productive safety

With services tailored specifically to your needs, SICK offers all-encompassing support for the safety of your machine or system.

Address productivity and cost-effectiveness from the start: From selection and planning, through commissioning and inspection, to maintenance and modernization.

Special features of safety laser scanners and laser scanners

S3000 – The modular system

- Modular concept
- Largest achievable scanning range is 7 m for safety applications
- Configuration memory in the system plug
- Selectable resolution makes it possible to adapt the devices to a very wide range of application requirements
- Certified for vertical use for access control or entry/exit applications, as well as hand protection
- 7-segment display
- Integrated external device monitoring (EDM)
- Safe integration in bus systems
- Up to 8 switchable protective/warning fields (field sets)
- Formation of host/guest systems with S3000/S300
- Direct connection of incremental encoders
- Measured data output via RS-422 interface
- Reflector mark detection

Modular concept

S300/S200 – Compact. Flexible. Intelligent.

- Extremely compact
 - S300 is the first small safety laser scanner in the world
 - S200 – the first laser scanner for cat. 2 applications
- 8 m warning field and 2 m protective field
- 270° scan angle
- Configuration memory in the system plug
- Selectable resolution makes it possible to adapt the devices to a very wide range of application requirements
- Certified for vertical use for access control or entry/exit applications, as well as hand protection
- 7-segment display
- Integrated external device monitoring (EDM)
- Safe integration in bus systems
- Up to 8 switchable protective/warning fields (field sets)
- Formation of host/guest systems with S300/S3000
- Direct connection of incremental encoders
- Stand-by input
- RS-422 data interface

S100 – The compact all around solution

- Non-safety rated device
- Switching field range 10 m
- 270° scan angle
- Selectable resolution
- Up to 8 field sets
- Configuration connection
- 7-segment display
- Stand-by input
- CANopen interface integrated

Technical data overview

Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Warning field range	49 m (20 m at 20 % reflectivity)
Number of field sets	8
Scan angle	190°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Response time	60 ms, 120 ms

Product description

The S3000 Professional can be used for a wide range of applications for the protection of machines and systems. The field sets can be conveniently defined using a PC or laptop.

- For complex applications with up to 8 protective fields/warning fields
- Static and dynamic protective field switching

- Incremental encoder connections
- Possibility of connecting two S3000 units to form a single system
- Uniform "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

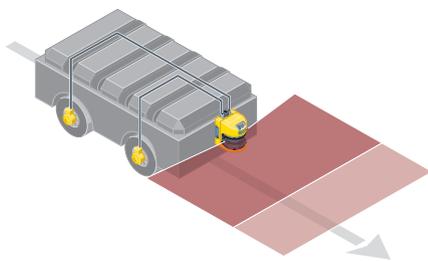

Combined with SICK safe control solutions

→ For more combinations, see annex

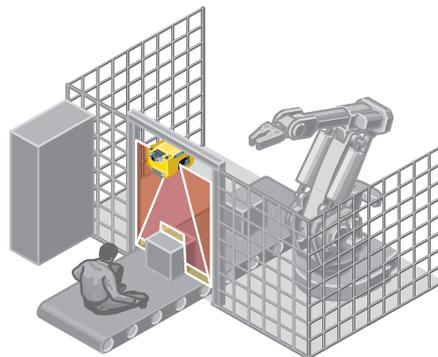

Applications

→ You can find more applications using the application finder at www.mysick.com

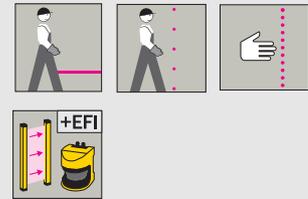

- Automated Guided Vehicles (AGVs)
- Production lines
- Machining centers
- Entry/exit stations (gates)
- Robot cells
- Narrow aisle vehicles

Speed-dependent vehicle monitoring

Vertical access protection (entry/exit) with "contour as reference"

- Modular concept
- Scanning range 4 m, 5.5 m or 7 m
- Configuration memory
- Selectable resolution
- Certified for vertical use
- 7-segment display
- Integrated external device monitoring (EDM)

Technical data overview

Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Warning field range	49 m (20 m at 20 % reflectivity)
Number of field sets	1
Scan angle	190°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Response time	60 ms, 120 ms

Product description

S3000 Standard safety laser scanners are used for the horizontal and vertical protection of hazardous areas, hazardous points and accesses as well as to protect automated guided vehicles.

- 1 protective and warning field

- Possibility of connecting two S3000 units to form a single system
- Uniform "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

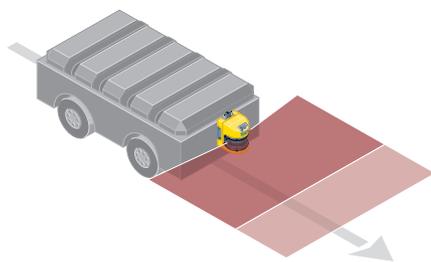

In-system added value

Combined with SICK safe control solutions

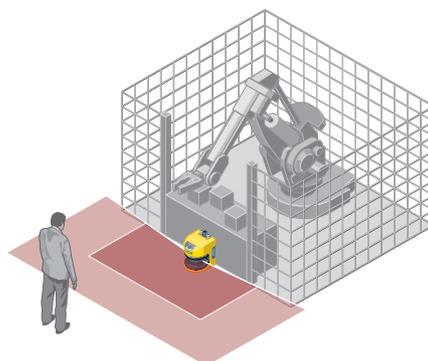

→ For more combinations, see annex

Applications

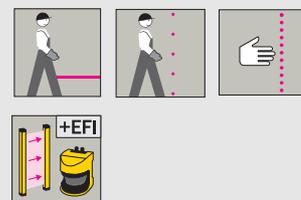

- Automated Guided Vehicles (AGVs)
- Production lines
- Machining centers
- Entry/exit stations (gates)
- Robot cells
- Narrow aisle vehicles

Hazardous area protection on an AGV with one direction of travel

Hazardous area protection on a robot cell

D

- Modular concept
- Scanning range 4 m, 5.5 m or 7 m
- Configuration memory
- Selectable resolution
- Certified for vertical use
- 7-segment display
- Integrated external device monitoring (EDM)

General data

Laser protection class	1 (21 CFR 1040.10 and 1040.11, DIN EN 60825:2001)
Enclosure rating	IP 65 (EN 60529)
Protection class	II (DIN VDE 0160, DIN EN 50178)
Safety related parameters	
Type	Type 3 (IEC/EN 61496-3)
Safety integrity level	SIL2 (IEC 61508) SILCL2 (EN 62061)
Category	Category 3 (EN ISO 13849)
Performance level	PL d (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	7.67×10^{-8} (EN ISO 13849)
T_M (Mission Time)	20 years (EN ISO 13849)
Ambient operating temperature from ... to	-10 °C ... +50 °C
Type of light	Pulsed laser diode
Wave length	905 nm
Housing color	RAL 1021 (yellow)
Housing material	Aluminum diecast
Front screen material	Polycarbonate
Front screen surface finish	Outside with scratch-resistant coating
System plug	With ESD protected configuration memory
Dimensions (W x H x D)	155 mm x 185 mm x 160 mm
Weight	3.3 kg

Functional data

Scan angle	190°
Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Reflectivity	1.8 % ... > 1000 %, reflectors
Response time	60 ms, 120 ms ¹⁾
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Angular resolution	0.5°, 0.25°, depending on range and resolution
Protective field supplement	100 mm
Warning field range	49 m (20 m at 20 % reflectivity)
Distance measuring range	49 m
Number of multiple samplings	2 ... 16, configurable via CDS
Delay of automatic reset	2 s ... 60 s, configurable

¹⁾ Depending on basic response time and multiple sampling

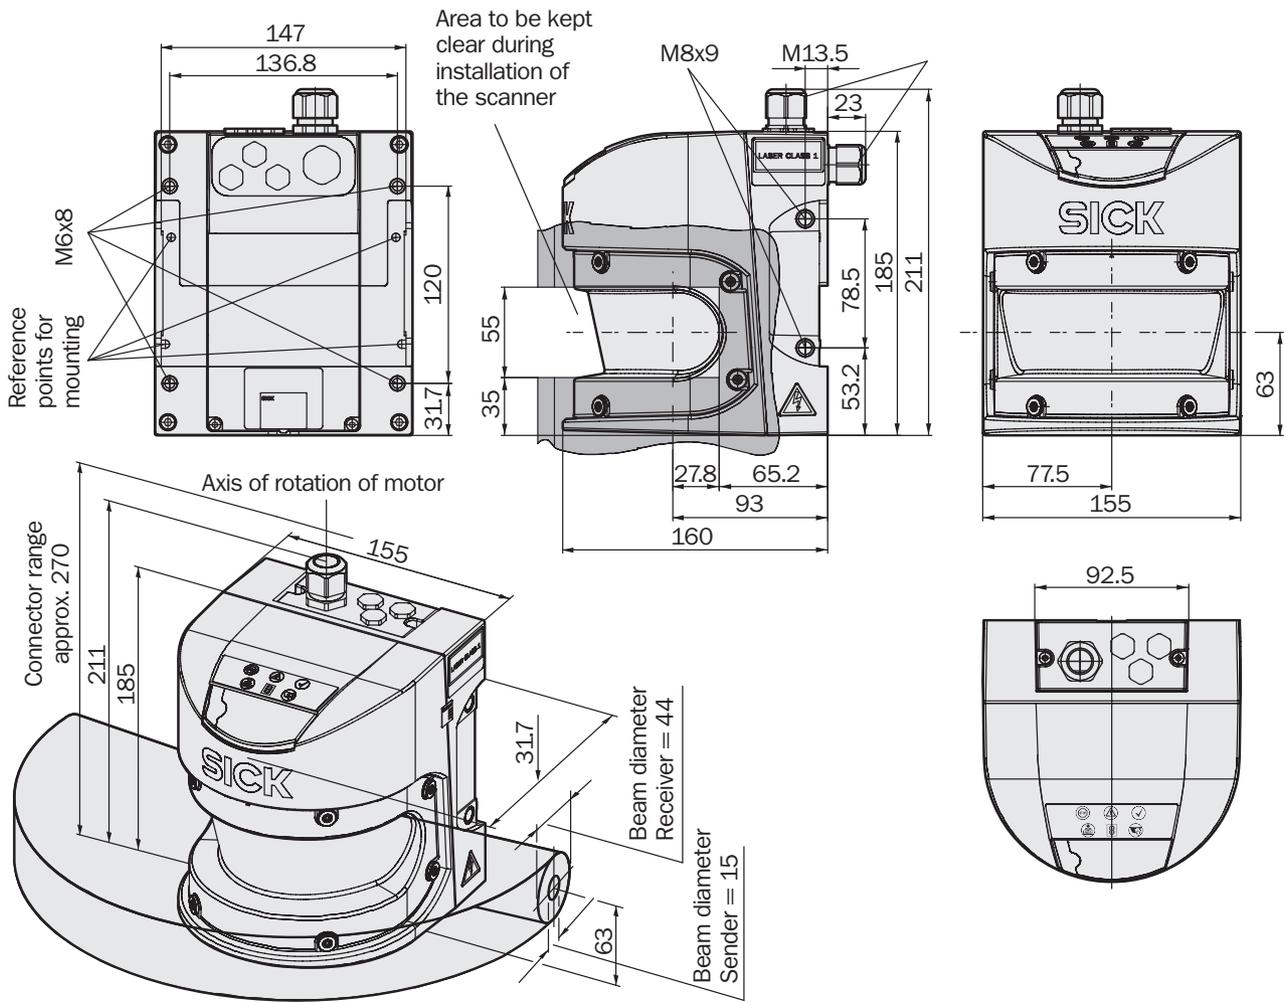

Electrical data

Connection type	Plug-in connection housing with screw Screw-type terminals
Supply voltage V_S	24 V DC (16.8 V DC ... 28.8 V DC)
Power consumption	0.8 A (24 V DC) 2.3 A ¹⁾
Number of inputs	
EDM	1
Restart/Reset	1
Number of outputs	
Safety outputs (OSSD)	2 x 500 mA
Output for warning field	1 x 100 mA
Diagnostic output	1 x 100 mA
Restart/reset required	1 x 100 mA
Configuration and diagnostics interface	RS-232
Transmission rate	9.6 kBaud, 19.2 kBaud, 38.4 kBaud
Data interface	RS-422 (\leq 500 kBaud)
Safe device communication via EFI/SDL	
Transmission rate	\leq 500 kBaud
Cable length	50 m
Connection conductor cross-section	0.34 mm ²

¹⁾ Including maximum output load

Technical data overview

Note: S3000 Remote can only be used in conjunction with another S3000 or a Flexi Classic or Flexi Soft safety controller

Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Warning field range	49 m (20 m at 20 % reflectivity)
Number of field sets	8, the number of field sets is dependent on the S3000 variant to which the S3000 Remote is connected
Scan angle	190°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Response time	60 ms, 120 ms

Product description

Autonomous vehicle systems can be protected cost-effectively to suit the specific application using S3000 Remote.

- Up to 8 protective/warning fields
- For complex applications with host/guest combinations

- For 2 directions of travel
- Uniform "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

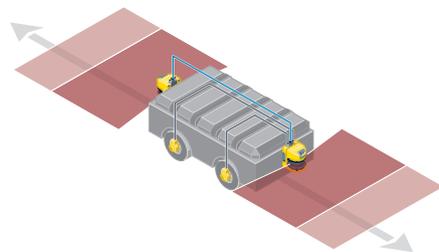

Combined with SICK safe control solutions

→ For more combinations, see annex

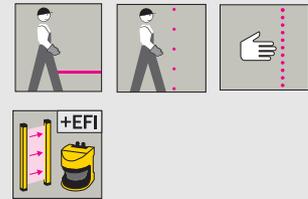

Applications

Product description

With the S3000 Professional CMS (Contour Measurement and Safety), it is possible for the first time to combine the protection of people and the acquisition of surrounding contours. This system opens up new ways to achieve your objectives in the logistics and materials handling market.

- Personnel protection and acquisition of the surrounding contour in one scanner
- Measured data output via RS-422 interface in real-time
- Reflector mark detection up to 30 m

- Velocity transfer for odometry
- 8 switchable protective/warning fields
- Static and dynamic protective field switching
- Incremental encoder connections
- Possibility of connecting two S3000 units to form a single system
- Uniform "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

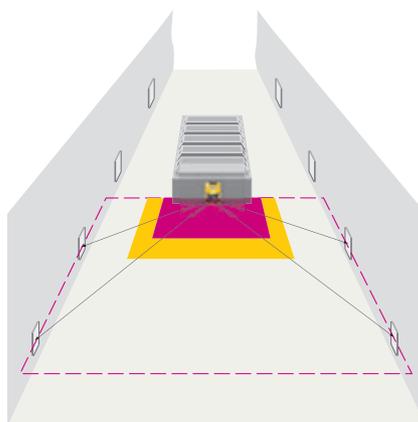

Combined with SICK safe control solutions

→ For more combinations, see annex

Applications

→ You can find more applications using the application finder at www.mysick.com

- Automated Guided Vehicles (AGVs)

Technical data overview

Note: S3000 PROFINET IO does not have any local inputs or outputs and is only operated in a network with corresponding controller.

Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Warning field range	49 m (20 m at 20 % reflectivity)
Number of field sets	8
Scan angle	190°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Response time	60 ms, 120 ms

Product description

S3000 PROFINET IO Professional is the ideal system for direct integration in the bus system. The device communicates all I/O signals directly with the network or the higher level control, including detailed diagnostics. Three scanning range variants with 8 protective fields prepare the system for the future.

- Instructive diagnostic messages
- Simple process image
- Future-oriented and expandable
- Mounting compatibility with conventional S3000 systems (brackets)

- Incorporated in the CDS "Configuration & Diagnostic Software" platform
- PROFINET IO with Conformance Class B
- PROFIsafe V2.0
- Ethernet TCP/IP
- 2-port switch with autonegotiation and autocrossing
- 100 Mbit/s (10 Mbit/s for configuration and diagnosis purposes)
- SNMP
- LLDP
- Cyclic IO communication
- Acyclic read/write services for communication via TCI interface

In-system added value

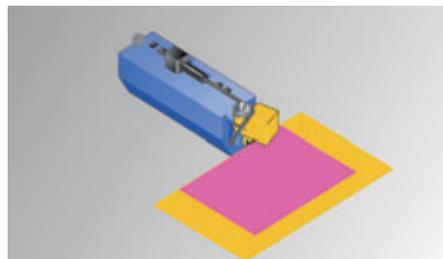

- Direct integration in bus systems with higher level control
- Device access via network

→ For more combinations, see annex

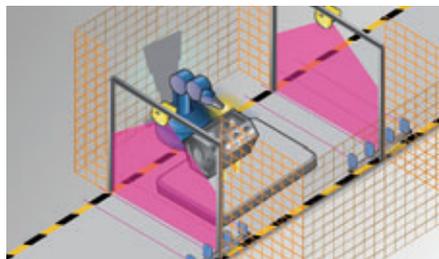

Applications

→ You can find more applications using the application finder at www.mysick.com

- Hazardous area protection on machines
- Entry/exit systems
- Protection of machines with changing protection areas
- Hazardous area protection in robot cells (e.g., welding applications)
- Hazardous area protection in production systems (e.g., final assembly lines)

Hazardous area protection on a pipe-bending machine

Safe vertical monitoring with detection of people

- Direct integration in bus systems
- Configuration memory
- Selectable resolution
- 7-segment indicator
- Certified for vertical use
- 2 standard PROFINET IO sockets for RJ-45 push-pull

General data

Laser protection class	1 (21 CFR 1040.10 and 1040.11, DIN EN 60825:2001)
Enclosure rating	IP 65 (EN 60529)
Protection class	III (DIN VDE 0160, EN 60950)
Safety related parameters	
Type	Type 3 (IEC/EN 61496-3)
Safety integrity level	SIL2 (IEC 61508) SILCL2 (EN 62061)
Category	Category 3 (EN ISO 13849)
Performance level	PL d (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	4.0×10^{-8} (EN ISO 13849)
T_M (Mission Time)	20 years (EN ISO 13849)
Ambient operating temperature from ... to	-10 °C ... +50 °C
Type of light	Pulsed laser diode
Wave length	905 nm
Housing color	RAL 1021 (yellow)
Housing material	Aluminum diecast
Front screen material	Polycarbonate
Front screen surface finish	Outside with scratch-resistant coating
Supply connector	With ESD protected configuration memory
Dimensions (W x H x D)	155 mm x 185 mm x 160 mm
Weight	3.3 kg

Functional data

Scan angle	190°
Protective field range, radial (depending on type)	4 m / 5.5 m / 7 m
Reflectivity	1.8 % ... > 1000 %, reflectors
Response time	60 ms, 120 ms ¹⁾
Resolution	30 mm, 40 mm, 50 mm, 70 mm, 150 mm, selectable
Angular resolution	0.5°, 0.25°, depending on range and resolution
Protective field supplement	100 mm
Warning field range	49 m (20 m at 20 % reflectivity)
Distance measuring range	49 m
Number of multiple samplings	2 ... 16, configurable via CDS
Delay of automatic reset	2 s ... 60 s, configurable

¹⁾ Depending on basic response time and multiple sampling

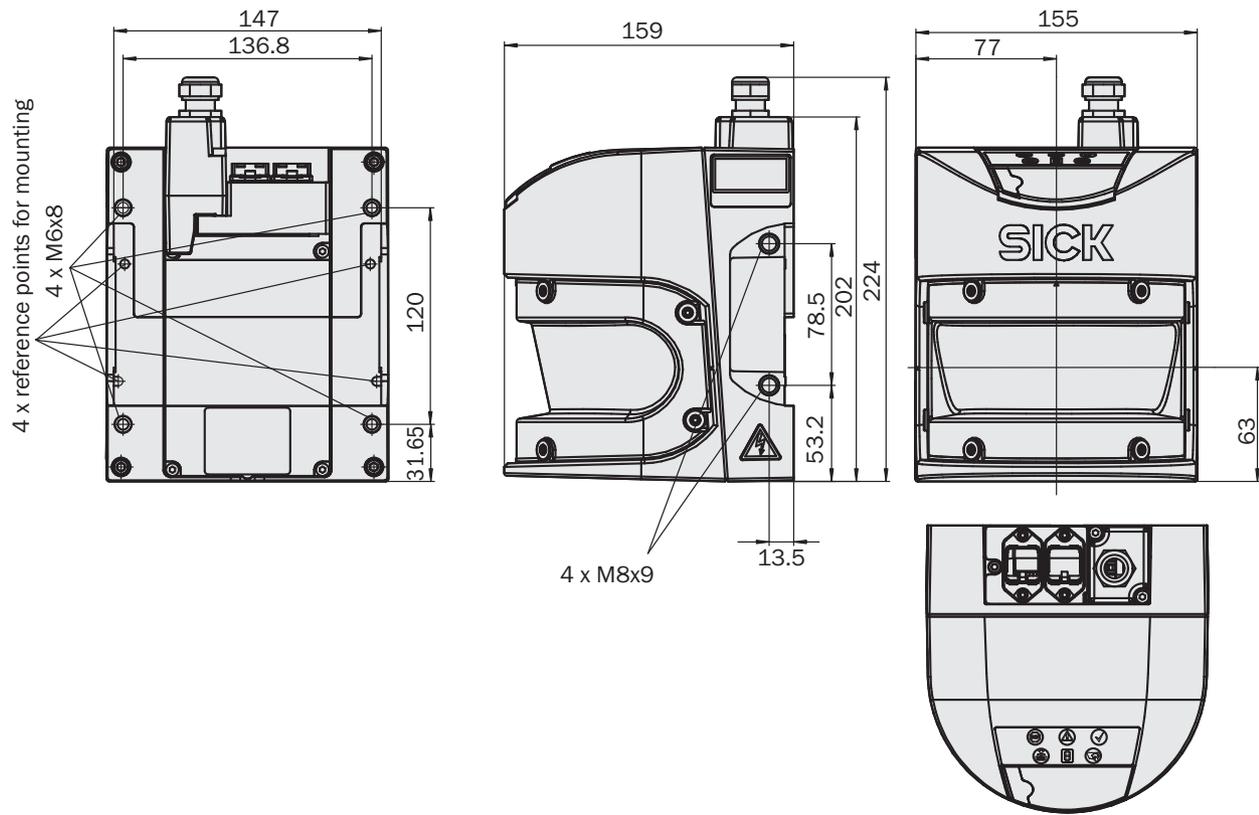

Electrical data

Connection type	2 sockets for RJ-45 push-pull connector Plug-in supply connector with screw type terminal and cable gland for cable diameter 5 mm ... 10 mm
Supply voltage V_S	24 V DC (16.8 V DC ... 28.8 V DC)
Power consumption	0.8 A (24 V DC) 2.3 A
Local configuration and diagnostics interface	RS-232
Transmission rate	9.6 kBaud, 19.2 kBaud, 38.4 kBaud
Supported services	PROFINET IO Conformance Class B, LLDP, SNMP, MIB II, acyclic read/write services for communication via TCI interface, TCP/IP communication via Port 9000

Product description

The S3000 Cold Store safety laser scanner provides protection for persons and in plants and is particularly suitable for use in cold areas down to -30 °C. Both stationary applications (e.g., area or gate protection) and mobile applications (e.g., AGVs) can be implemented. The scanner has an IP 67 housing and is equipped with integrated,

thermostatically controlled heating. Thus the device requires no additional measures for use. In addition, the scanner has up to 4 switchable protective fields, an intelligent bus connection, and offers the most flexibility.

The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

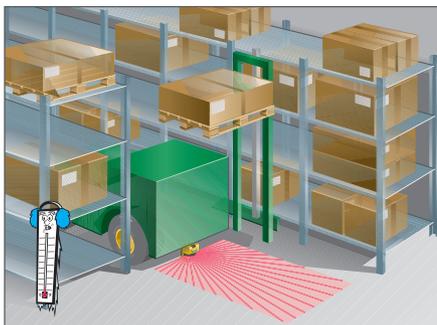

Combined with SICK safe control solutions

Product description

The safety laser scanner for mobile or stationary use. The ideal solution for small automated guided vehicles and service robots which require a high number of protective and warning fields.

- 8 switchable protective/warning fields
- Adjustable object resolution

- Facility for connecting incremental encoder
- Measured data output over RS-422 data interface
- Multi-system "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

General data

Laser protection class	1 (21 CFR 1040.10 und 1040.11, IEC 60825-1:2001)
Enclosure rating	IP 65 (EN 60529)
Protection class	II (DIN VDE 0160, DIN EN 50178)
Safety related parameters	
Type	Type 3 (IEC/EN 61496-3)
Safety integrity level	SIL2 (IEC 61508) SILCL2 (EN 62061)
Category	Category 3 (EN ISO 13849)
Performance level	PL d (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	5.29×10^{-8} (EN ISO 13849)
T_M (Mission Time)	20 years (EN ISO 13849)
Ambient operating temperature from ... to	-10 °C ... +50 °C
Type of light	Pulsed laser diode
Wave length	905 nm
Housing color	RAL 1021 (yellow)
Housing material	Aluminum diecast
Optics cover material	Polycarbonate
Optics cover surface finish	Outside with scratch-resistant coating
System plug	With ESD protected configuration memory
Dimensions (W x H x D)	102 mm x 152 mm x 105 mm
Weight	1.2 kg

Functional data

Scan angle	270°
Protective field range, radial	2 m
Reflectivity	1.8 % ... > 1000 %, reflectors
Response time	80 ms
Resolution	30 mm, 40 mm, 50 mm, 70 mm, selectable
Angular resolution	0.5°
Protective field supplement	100 mm
Warning field range	8 m (at 30 % reflectivity)
Distance measuring range	30 m
Number of multiple samplings	2 ... 16, configurable via CDS
Delay of automatic reset	2 s ... 60 s, configurable

Electrical data

Connection type	Plug-in connection housing with screw Screw-type terminals
Supply voltage V_S	24 V DC (16.8 V DC ... 30 V DC)
Power consumption	0.33 A (24 V DC) ¹⁾ 1.65 A ²⁾
Number of inputs	
EDM	1
Restart/Reset	1
Static switching signals or dynamic encoder signals	2, dual-channel
Standby	1
Number of outputs	
Safety outputs (OSSD)	2 x 250 mA
Output for warning field	1 x 100 mA
Diagnostic output	1 x 100 mA
Restart/reset required	1 x 100 mA
Configuration and diagnostics interface	RS-232
Transmission rate	38.4 kBaud
Data interface	RS-422
Transmission rate	38.4 kBaud ... 500 kBaud
Safe device communication via EFI/SDL	
Transmission rate	500 kBaud
Cable length	50 m
Connection conductor cross-section	0.22 mm ²

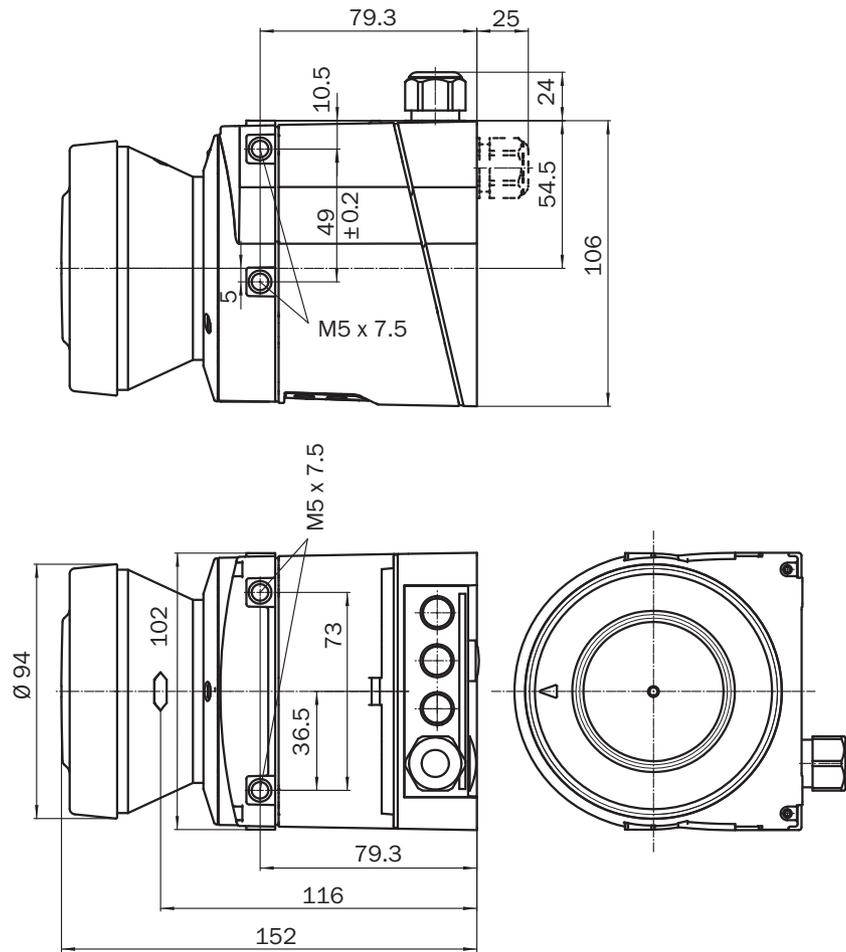

¹⁾ Maximum, without output load

²⁾ Including maximum output load

Technical data overview

Protective field range, radial	2 m
Warning field range	8 m (at 30 % reflectivity)
Number of field sets	4
Scan angle	270°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, selectable
Response time	80 ms

Product description

Small but refined, the safety laser scanner for mobile use.

Optimal protection, e.g., for small, free moving transport systems and service robots on which the protective fields must be flexibly adjusted to different velocities.

- 4 switchable protective/warning fields
- Adjustable object resolution

- Facility for connecting incremental encoder
- Measured data output over RS-422 data interface
- Multi-system "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

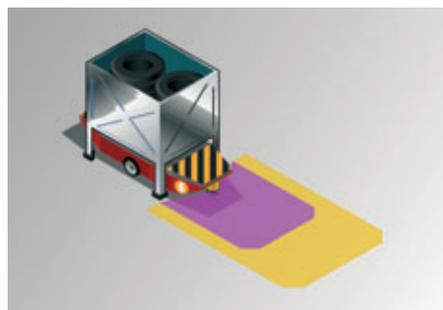

Combined with SICK safe control solutions

→ For more combinations, see annex

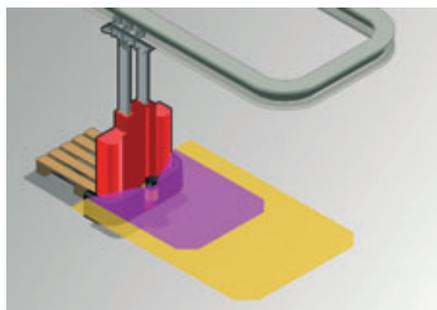

Applications

→ You can find more applications using the application finder at www.mysick.com

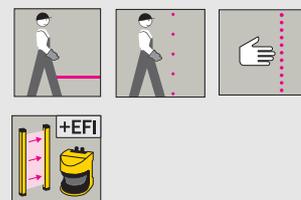

- Automated Guided Vehicles (AGVs)
- Production lines
- Machining centers
- Entry/exit stations (gates)
- Robot cells
- Overhead monorail transport systems

Hazardous area protection of an AGV

Hazardous area protection on an electrical overhead conveyor

- Extremely compact design
- Scanning angle 270°
- Selectable resolution
- Certified for vertical use
- 7-segment display
- Integrated external device monitoring (EDM)
- Stand-by input

Protective field switching with two static inputs

D

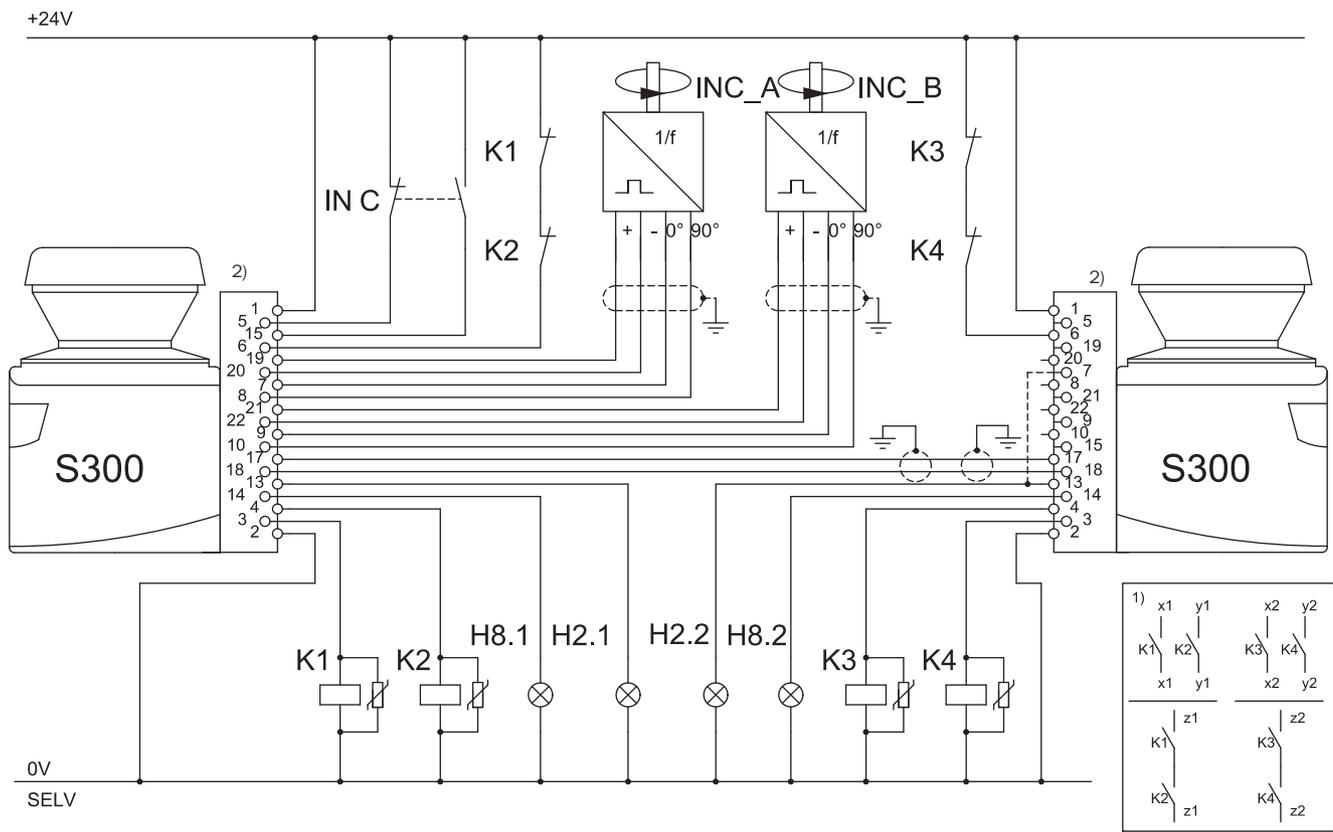

- S300 Professional in conjunction with relays/contactors
- Operating mode: with restart interlock and external device monitoring (EDM)
- Protective field switching using control input IN A and IN B

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and taking the risk analysis into account.
- 2) Functional earth (FE): To achieve the specified EMC safety, the functional earth (FE) must be connected (e.g., to the central earth star point on the vehicle or the system).

Protective field switching between two S300s with static and dynamic inputs

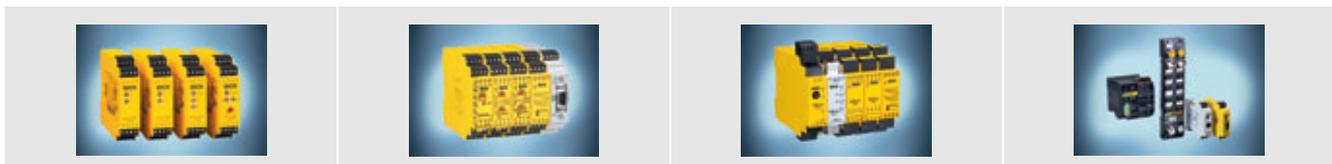

- S300 Professional with S300 Professional in master/slave connection with relays/contactors
- Operating mode: with restart interlock and external device monitoring
- Dynamic protective field switching by the incremental encoders A and B on the master
- Static protective field switching using the control input IN C on the master
- The protective fields affect the related OSSDs on master or slave

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and taking the risk analysis into account.
- 2) Functional earth (FE): To achieve the specified EMC safety, the functional earth (FE) must be connected (e.g., to the central earth star point on the vehicle or the system).

Product description

Compact safety laser scanner for complete safety.

The S300 Advanced is the system of choice particularly for applications with changing operating positions, e.g., insertion stations, robots, moving workbenches and more.

- 2 protective/warning fields

- Possibility of connecting two S300 units to form a single system
- Static protective field switching
- Multi-system "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

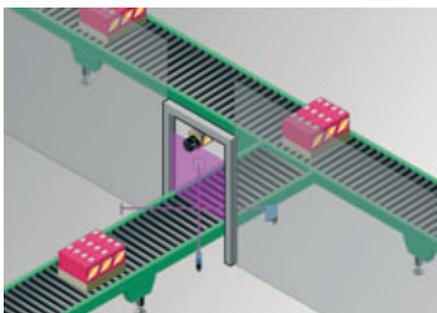

Combined with SICK safe control solutions

→ For more combinations, see annex

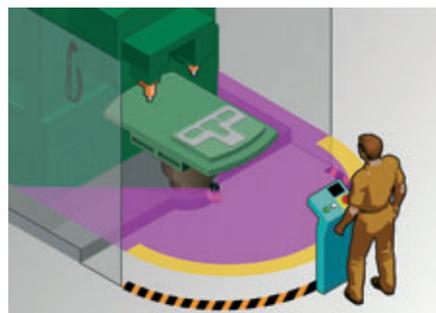

Applications

→ You can find more applications using the application finder at www.mysick.com

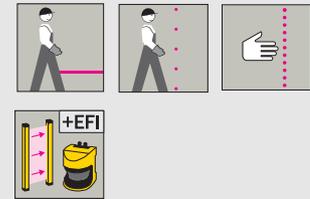

- Automated Guided Vehicles (AGVs)
- Production lines
- Machining centers
- Entry/exit stations (gates)
- Robot cells
- Overhead monorail transport systems

Access protection with differentiation between man and material (muting alternative)

Hazardous area protection on a rotary table

- Extremely compact design
- Scanning angle 270°
- Selectable resolution
- Certified for vertical use
- 7-segment display
- Integrated external device monitoring (EDM)
- Stand-by input

Product description

High-end safety at an entry level price. The low-cost solution for simple requirements with one protective field and warning field. Ideal for the horizontal and vertical protection of hazardous areas and areas of access.

With adjustable object resolution as well as configurable "contour as reference."

- 1 protective and warning field
- Multi-system "Configuration & Diagnostic Software" CDS

In-system added value

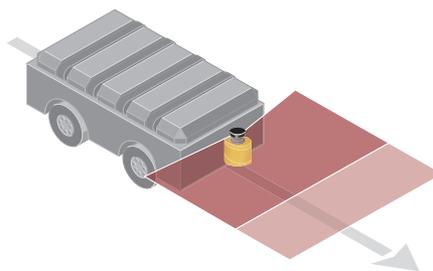

Combined with SICK safe control solutions

With restart interlock and external device monitoring

D

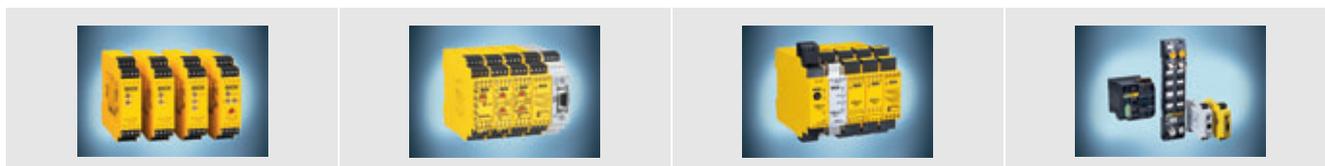

SELV

- S300 Standard in conjunction with relays/contactors
- Operating mode: with restart interlock and external device monitoring (EDM)

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and taking the risk analysis into account.
- 2) Functional earth (FE): To achieve the specified EMC safety, the functional earth (FE) must be connected (e.g., to the central earth star point on the vehicle or the system).

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Protective field range, radial	2 m
Warning field range	8 m (at 30 % reflectivity)
Number of field sets	4
Scan angle	270°
Resolution	30 mm, 40 mm, 50 mm, 70 mm, selectable
Response time	80 ms

Product description

The S300 Professional CMS is a safety laser scanner with expanded measured data output to support the navigation of small freely moving transport vehicles/AGV. It performs two tasks at the same time and saves expensive sensor technology and installation costs.

- Personnel protection and acquisition of the surrounding contour in one scanner
- Measured data output via RS-422 interface in real-time
- Reflector mark detection up to 20 m
- 4 switchable protective/warning fields
- Facility for connecting incremental encoder
- Possibility of connecting two S300 units to form a single system
- Multi-system "Configuration & Diagnostic Software" CDS
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

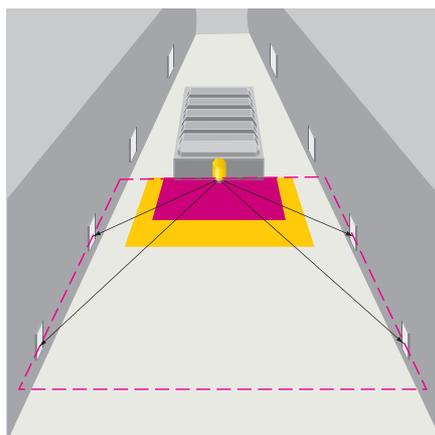

Combined with SICK safe control solutions

→ For more combinations, see annex

Applications

→ You can find more applications using the application finder at www.mysick.com

- Automated Guided Vehicles (AGVs)

Personnel protection and acquisition of the surrounding contour with integrated reflector detection

Protective field switching with static and dynamic inputs

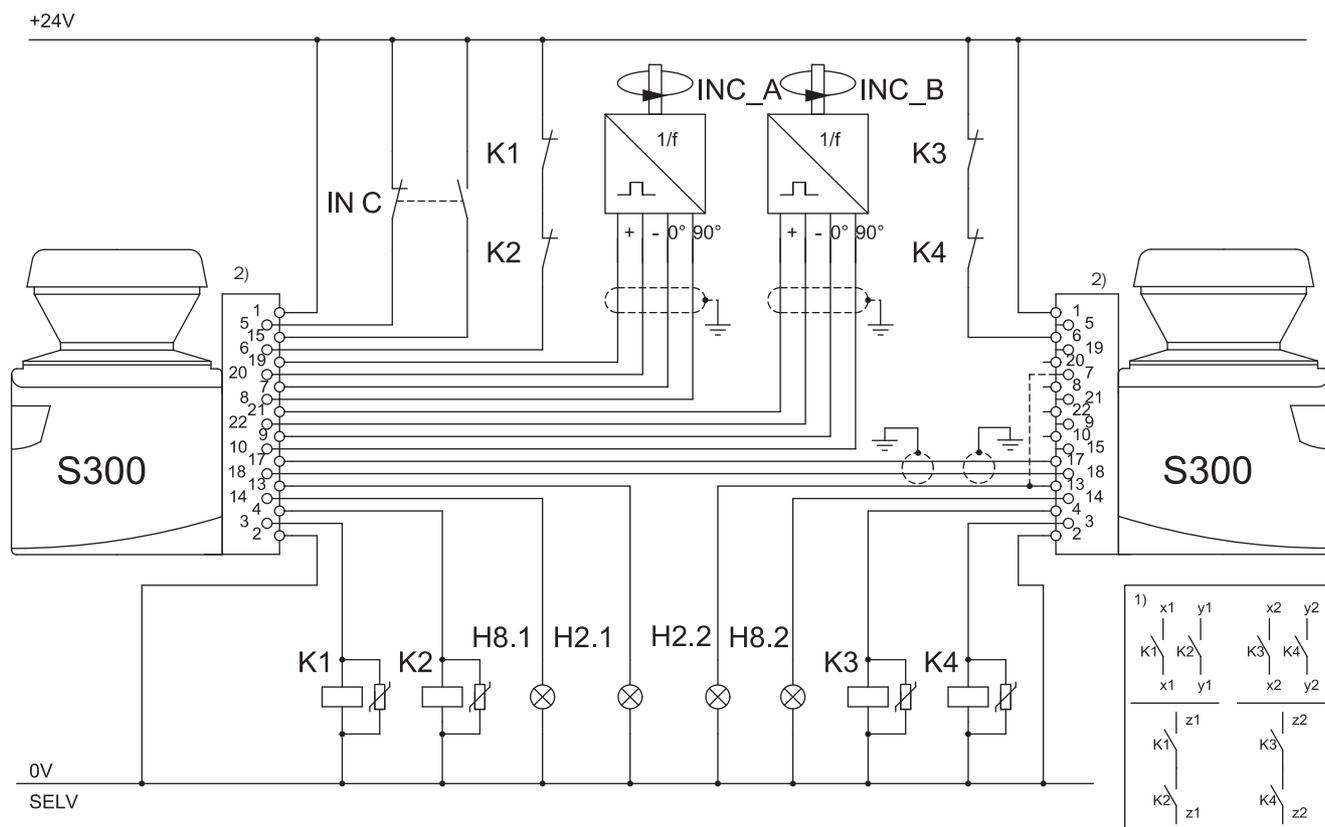

- S300 Professional CMS in conjunction with UE10-3OS
- Operating mode: without restart interlock, with external device monitoring (EDM)
- Dynamic protective field switching by the incremental encoders A and B
- Static protective field switching using the control input IN C

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and taking the risk analysis into account.
- 2) Functional earth (FE): To achieve the specified EMC safety, the functional earth (FE) must be connected (e.g., to the central earth star point on the vehicle or the system).

Protective field switching between two S300s with static and dynamic inputs

D

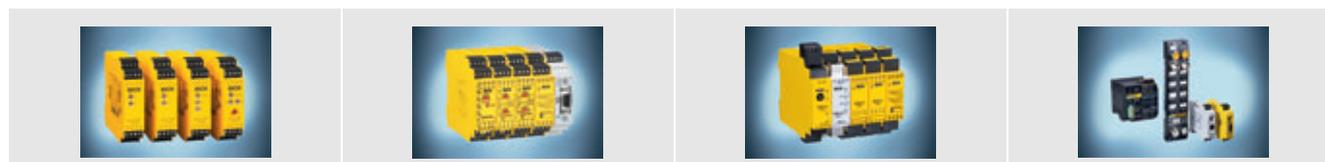

- S300 Professional CMS with S300 Professional CMS in master/slave connection with relays/contactors
- Operating mode: with restart interlock and external device monitoring
- Dynamic protective field switching by the incremental encoders A and B on the master
- Static protective field switching using the control input IN C on the master
- The protective fields affect the related OSSDs on master or slave

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and taking the risk analysis into account.
- 2) Functional earth (FE): To achieve the specified EMC safety, the functional earth (FE) must be connected (e.g., to the central earth star point on the vehicle or the system).

Product description

The S200 is a state-of-the-art solution that meets type 2 requirements, in accordance with IEC/EN 61496. It offers a high level of functionality at a low cost.

The S200 is flexible and easy to integrate, can be used horizontally and vertically, and has adjustable object resolution as well as the "contour as reference" function.

- 1 protective/warning field (field set)
- Uniform "Configuration & Diagnostic Software" CDS

In-system added value

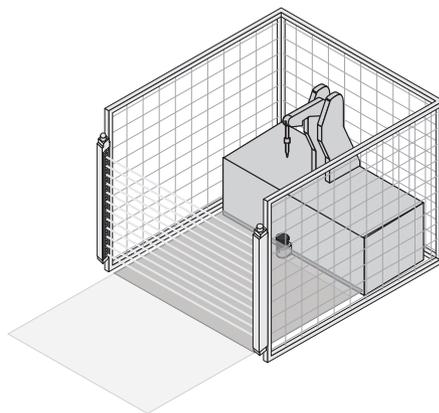

Combined with SICK safe control solutions

→ For more combinations, see annex

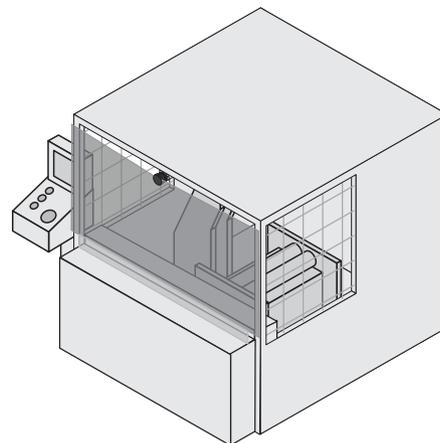

Applications

→ You can find more applications using the application finder at www.mysick.com

- Machining centers
- Entry/exit stations (gates)
- Robot cells
- Overhead monorail transport systems

Point-of-operation guarding on a robot cell using S200 in conjunction with safety light curtain

Hazardous point protection on a small automatic placement machine

Product description

Damaged goods, or defective machines and equipment can impede or stop processes – causing expensive downtime. The S100 laser scanner offers an efficient and economical way to prevent this. The S100 is not safety rated and was specially developed for collision avoidance in areas where people are not present or to help solve customers' supplemental monitoring applications. The S100 detects problems, moni-

tors distances and prevents potential collisions.

The ideal solution for logistics and factory automation:

- Preventing collisions on machines, in plants and with vehicles
- Controlling doors and gates
- Monitoring transfer and stacks of material
- Checking loads and occupancy
- Approach protection

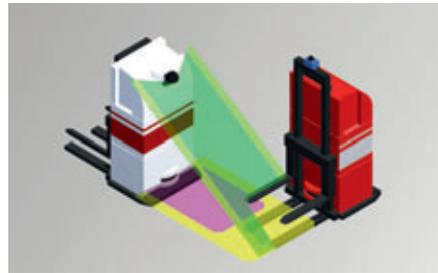

Applications

→ You can find more applications using the application finder at www.mysick.com

- Industrial trucks
- Automated Guided Vehicles (AGVs)
- Shelving access devices
- Shunting/towing vehicles
- Machine tools
- Doors/gates
- Assembly plant

Space check and collision prevention during storage by shelving storage and retrieval units

Collision prevention on automated guided vehicles

- Compact housing
- Tough, IP 65 design
- Stand-by input
- Selectable object resolution
- 7-segment display
- Integrated parameter memory in system plug
- CANopen interface
- Low energy consumption

Variable object resolution	10 mm, depending on distance
Response time	40 ms

Product description

Damaged goods, or defective machines and equipment can impede or stop processes – causing expensive downtime. The S100 laser scanner offers an efficient and economical way to prevent this. The S100 is not safety rated and was specially developed for collision avoidance in areas where people are not present or to help solve customers' supplemental monitoring applications. The S100 detects problems, moni-

tors distances and prevents potential collisions.

The ideal solution for logistics and factory automation:

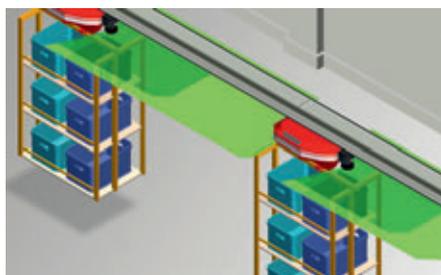

- Preventing collisions on machines, in plants and with vehicles
- Controlling doors and gates
- Monitoring transfer and stacks of material
- Checking loads and occupancy
- Approach protection

Applications

→ You can find more applications using the application finder at www.mysick.com

- Industrial trucks
- Automated Guided Vehicles (AGVs)
- Shelving access devices
- Shunting/towing vehicles

- Machine tools
- Doors/gates
- Assembly plant

Approach protection on Telfer/monorail systems

Monitoring the space behind a forklift truck

- Compact housing
- Tough, IP 65 design
- Stand-by input
- Selectable object resolution
- 7-segment display
- Integrated parameter memory in system plug
- CANopen interface
- Low energy consumption

Safety camera systems

Principle of operation

Safety camera systems from SICK are electro-sensitive protective devices that use image processing technology for hazardous point and hazardous area protection. The sender and receiver are contained in a single housing. The reset and external device monitoring functions are already integrated. Auto-

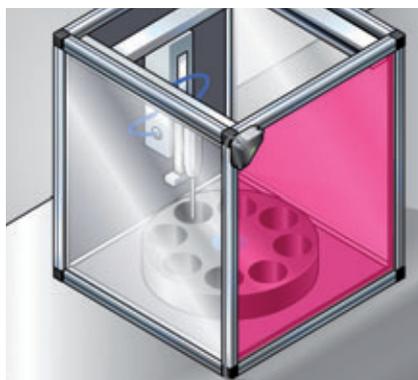

matic alignment on reflective tape makes it possible to quickly teach-in the area to be protected at the press of a button on the sensor – software configuration is therefore not required, nor is complex mounting or tedious alignment and adjustment.

Applications

Hazardous point protection for typical rectangular access openings on, e.g., assembly and handling machines or test stations are ideal for safety camera systems. It has a compact design, three resolution options, the choice of horizontal or vertical

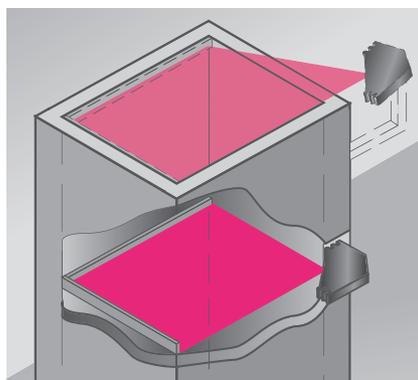

mounting, as well as the ability to combine two devices in synchronous mode. This opens up numerous cost-effective solutions on machines that in the past, could only be protected with a large amount of effort.

E

Vertical use

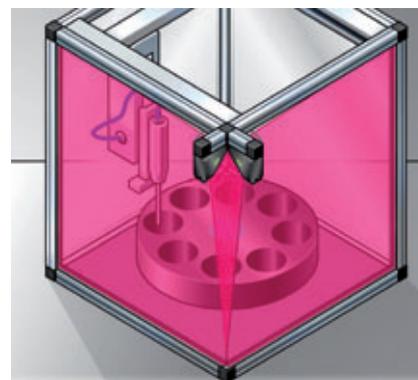

Machine openings with a size of up to 1.5 m × 1.5 m can be protected with a single device. Protective fields with an area of up to 2.25 m² are possible.

Horizontal use

For the protection of ducts, there are two suitable mounting positions for the device:

- inside the duct, in a recess
- outside the duct, at an upward angle

Unimpeded access

Protection of two adjacent sides: Synchronize two sensors to create a safety area that intersects at the corner of the opening. The operator has unimpeded access to the machine. In the synchronous mode, machine openings with a size of up to 3 m × 1.5 m can be protected, which corresponds to an area of 4.5 m².

Advantages of safety camera systems

The use of safety camera systems from SICK creates safe working conditions and provides unbeatable advantages throughout the entire product life cycle – starting from the order, through commissioning, to inventory.

One sensor for all protective field sizes

- Easy to order
- Low effort for logistics and stockholding

Less complex and easy to handle

- Automatic alignment
- No software necessary
- Fast commissioning

Highly flexible

- Variable protective field sizes: Protective fields adapt to the application, like a made-to-measure suit
- Selectable resolution
- Blind zone-free protection
- Can be used horizontally and vertically
- Combination of two devices in the synchronous mode

¹⁾ Depending on resolution set

Product description

The V300 Work Station Extended is a sensor based on innovative camera technology developed for hazardous point protection on rectangular point-of-operation openings. With just one component, the V300 can be mounted in a protected corner of the safety area, saving space.

The “one sensor fits all” concept reduces the number of sensor types – one sensor, combined with the suitable resolution set, covers the most diverse protective field.

When combining two V300 Work Station Extended units, the protective field size can be enhanced up to 300 cm x 150 cm.

Costs are reduced due to:

- No variants: simplified inventory
- One component: quick installation and commissioning, minimum use of resources
- Minimum power consumption

In-system added value

Combined with SICK safe control solutions

→ For more combinations, see annex

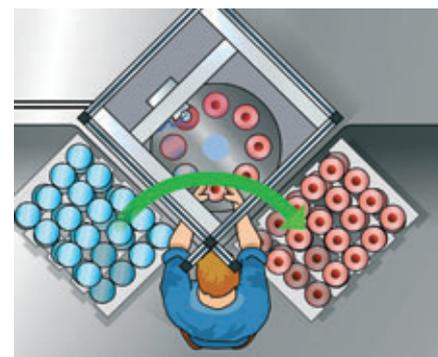

Applications

→ You can find more applications using the application finder at www.mysick.com

- Hazardous point protection in semi-automatic work processes
- Protection of test, assembly and inspection stations
- Service openings with sporadic access
- Presence detection

Hazardous point protection on a semi-automatic assembly machine

Hazardous point protection on a semi-automatic assembly machine. The combination of two camera systems can increase ergonomics.

V300 Work Station Extended on UE10-30S safety relay

Task

The V300 Work Station Extended safety camera system can be integrated into a relay controller/contactor controller with the aid of the UE10-30S safety relay. Operation is with external device monitoring (EDM) and internal restart interlock.

Function

If the light path is clear and there are no errors in the inactive state of the UE10-30S, the status LED on the V300 Work Station Extended flashes (reset required). The system is ready for switch-on and waits for an input signal/switch-on signal. The system is

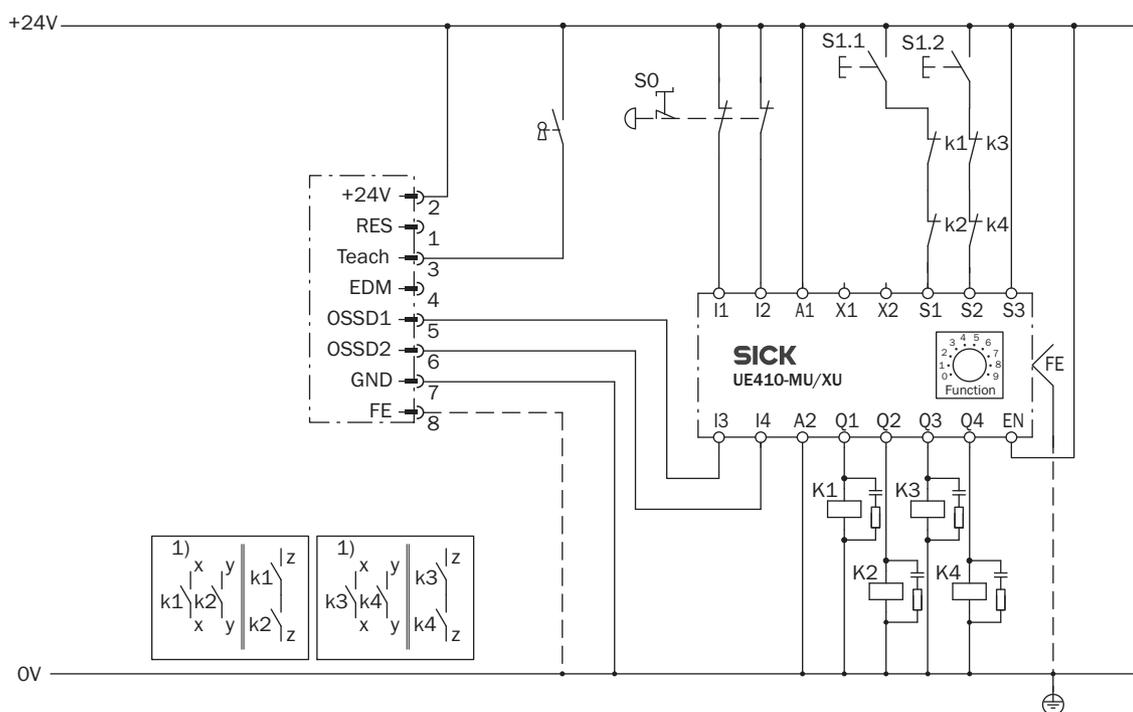

enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs carry power. The UE10-30S is switched on. On interruption of the light path, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

Possible faults

Cross-circuits and short-circuits on the OSSD1 and OSSD2 outputs are detected and will result in "lock-out." Malfunctions on the UE10-30S are detected. The shutdown function is retained. If the S1 button is tampered with (e.g., by jamming), the system will not re-enable the output circuits.

E

V300 Work Station Extended on Flexi Classic

E

Task

The V300 Work Station Extended safety camera system can be integrated into a relay controller/contactor controller with the aid of the modular Flexi Classic (UE410-MU with expansion UE410-XU) safety controller. Operation is with external device monitoring and internal restart interlock on the V300 Work Station Extended as well as restart interlock for the emergency stop.

Function

When the light path on the V300 Work Station Extended is clear and the input conditions on the Flexi Classic are valid, the system is ready for switch-on and waits for an input signal/switch-on

signal. The system's corresponding logic path is enabled by pressing and releasing the related S1 button. The related output on the Flexi Classic carries power. If the input conditions are no longer met, the related outputs on the Flexi Classic shut down.

Possible faults

Cross-circuits and short-circuits on the connection cables for the V300 Work Station Extended are detected and result in "lock-out." Malfunctions on the K1 to K4 contactors are detected. The shutdown function is retained. If the S1.x button is tampered with (e.g., by jamming), the system will not re-enable the output circuits.

	Solvent for adhesive, spray bottle, suitable for removing the reflective tape	Solvent for adhesive	5602135
	Plastic cleaner and care product, anti-static	Plastic cleaner	5600006

Other

Figure	Description	Type	Part no.
	Cloth for cleaning the front screen	Optical cleaning cloth	4003353

Safety light curtains

Principle of operation of safety light curtains

Safety light curtains are used for finger protection, hand protection and access protection. They comprise a sender unit and a receiver unit and are electro-sensitive. Depending on the type, various machine functions are integrated or can be selected

using safe control solutions: Restart interlock, external device monitoring, fixed/floating blanking, PSDI function, bypass function, operating mode selection, etc.

Applications for safety light curtains

Presses, automatic placement machines, robot insertion stations, transfer lines, palletizer systems, textile and wood processing machines, etc.

Tell us your application!

We will show you the most cost-effective solution.

Advantages of the SICK safety light curtains

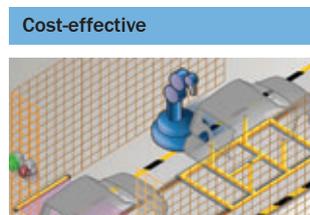

Only invest in what you actually need!

Effective protection for man and machine – irrespective of the safety task you want to address, SICK can provide a comprehensive solution with a wide range of safety light curtains.

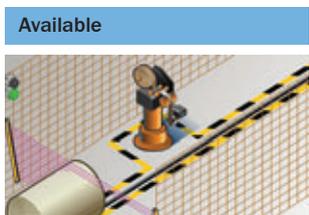

- Cost-saving, complete systems with integrated functions for a wide range of requirements
- Rapid commissioning

- Individual adaptation using CDS user software or customer-specific pre-settings from the factory
- Can be used with large temperature fluctuations as well as in wet areas due to IP69K Housing
- Reduced engineering and inventory costs due to universal interface for various automation environments
- Integrated PSDI mode with defined PSDI window provides up to 30% higher productivity

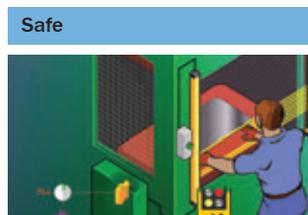

F

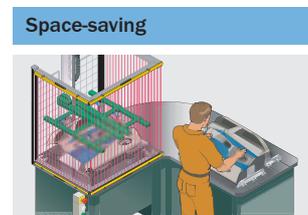

Cost-effective
Access protection:
A safety light curtain without additional sensors and mechanics

Available
Access protection with differentiation between man and material using "blanking"

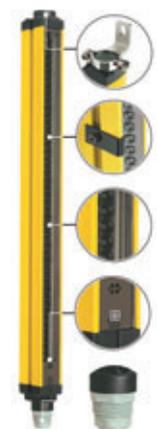

Safe
Classic finger/hand protection:
Defined PSDI window hinders unintentional cycle start caused by reaching over or reaching under

Space-saving
Miniaturization enables U-shaped hazardous point protection in small openings and spaces

Mounting and operation made easy

Comprehensive range of mounting solutions and accessories provides a wide range of installation options

Heavy-duty additional front screen for use with welding sparks

ATEX variants enable applications in zones 2 and 22 (ATEX II cat. 3G/3D).

7-segment display for device status with display that can be rotated by 180°

All peripheral technologies can be incorporated using a universal interface: from the relay through safe control to the bus.

Services for productive safety

With services tailored specifically to your needs, SICK offers all embracing support for the safety of your machine or system.

Address productivity and cost-effectiveness from the start: From selection and planning, through commissioning and inspection, to maintenance and modernization.

→ For information about the services please refer to chapter B

Technical data overview

Protective field height (depending on type)	150 mm ... 1800 mm
Scanning range (depending on type)	0 m ... 8 m / 0 m ... 19 m
Resolution (depending on type)	14 mm ... 40 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The C4000 Advanced safety light curtain is used wherever hazardous points and hazardous areas require reliable and cost-effective protection:

- Blanking functions allow defined objects to be present in the protective field, e.g., cables, benches.
- Quick teach-in on-site reduces setup times
- Adjustable tolerances increase availability

- Emergency stop, bypass or reset directly at the extension connection
- Application diagnostic output for status information
- Configure quickly and easily using Clone Plug
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

C4000 Advanced

General data

System part	Sender	Receiver
Resolution (depending on type)	14 mm ... 40 mm	
Scanning range (depending on type)	-	0 m ... 8 m / 0 m ... 19 m
Protective field height (depending on type)	300 mm ... 1800 mm	
Safety related parameters		
Type	Type 4 (IEC 61496)	
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	1.5 x 10 ⁻⁸ (EN ISO 13849)	
T _M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	Max. 26 ms ¹⁾
Protection class	III	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	

¹⁾ Without beam coding, without blanking, no cascaded systems. Other response times, see operating instructions.

Functional data

System part	Sender	Receiver
Restart interlock	-	✓
Restart interlock (delivery status)	-	External
External device monitoring	-	✓
External device monitoring (delivery status)	-	Deactivated
Beam coding	✓	
Beam coding (delivery status)	Non-coded	
Reduced resolution (depending on type)	- / ✓	✓
Extension connection (depending on type)	- / ✓	
Emergency stop / bypass at extension connection (depending on type)	-	- / ✓
Bypass (with UE402)	-	✓
Operating mode switching (with UE402)	-	✓
PSDI mode (with UE402)	✓	
Safe device communication via EFI/SDL	✓	
Configuration method	PC with CDS (configuration and diagnostic software)	

Electrical data

System part	Sender	Receiver
System connection	Hirschmann plug M26 x 11 + FE	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Extension connection (depending on type)	Hirschmann socket M26 x 11 + FE / socket M12 x 7 + FE	
Connection cable wire cross-section	M26 x 11 + FE	0.75 mm ²
	M12 x 7 + FE	0.25 mm ²
Configuration connection	M8 x 4	
Supply voltage V _s	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	≤ 10 % ³⁾	
Power consumption	Max. 2 A	Max. 3 A
Safety outputs (OSSD)	Type of output	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
	Switching voltage HIGH	24 V DC (V _S - 2.25 V DC ... V _S)
	Switching voltage LOW	2 V DC
	Switching current	Max. 500 mA
Display elements	7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S.

C4000 Advanced on UE402 switching amplifier

Task

Integration of a C4000 Advanced safety light curtain with UE402 in a controller. Six configurable operating modes with restart interlock and external device monitoring. PSDI mode with TDC, BDC, SCC. Teachable blanking areas.

Operating characteristics

If no object is detected in the active protective field and the K1 and K2 contactors are in the de-energized position, the H3 lamp flashes as a prompt to operate S1 control switch. The OSSDs are switched on when S1 is operated (button is pressed and released). These outputs activate K1 and K2 contactors. Upon the detection of an object in an active protective field, the OSSDs deactivate K1 and K2 contactors.

Fault analysis

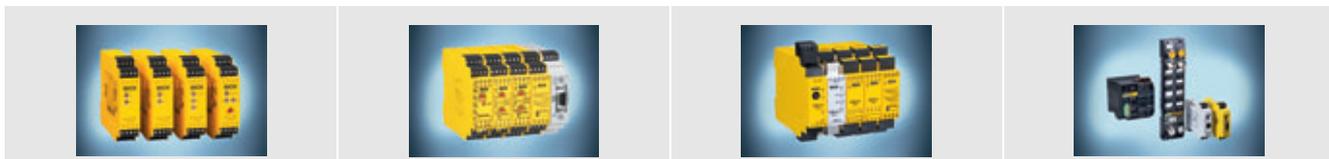

The incorrect functioning of one of the K1 or K2 contactors does not result in the loss of the shutdown function. OSSD cross-

circuits and short-circuits are detected and lead to the inhibited state (lock-out). On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
 - 2) PELV in accordance with the requirements in EN 60204-1 / 6.4
- Please see the operating instructions for the related devices to obtain information on the effects of the functions with configurable parameters. This information is to be observed.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Protective field height (depending on type)	150 mm ... 1800 mm
Scanning range (depending on type)	0 m ... 8 m / 0 m ... 19 m
Resolution (depending on type)	14 mm ... 40 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The C4000 Standard safety light curtain is used wherever hazardous points and hazardous areas require reliable and cost-effective protection:

- Alignment and diagnostics via 7-segment display
- Application diagnostic output for status information
- Configuration and diagnostics via RS-232 interface

- Emergency stop button or reset button directly at the extension connection
- Rapid commissioning due to preconfigured devices
- Configure quickly and easily using Clone Plug
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

UE402 switching amplifier

Description	Type	Part no.
Expands C4000 Standard, Advanced, Palletizer, Entry/Exit and Fusion with the functions described in the technical data, e.g., bypass, operating mode switching or in addition PSDI mode on C4000 Standard, Advanced.	UE402	1023577

Technical specifications

→ You can find more detailed data in the operating instructions. Download at www.mysick.com

C4000 Standard

General data

	Sender	Receiver
Resolution (depending on type)	14 mm ... 40 mm	
Scanning range (depending on type)	-	0 m ... 8 m / 0 m ... 19 m
Protective field height (depending on type)	300 mm ... 1800 mm	
Safety related parameters		
Type	Type 4 (IEC 61496)	
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	1.5×10^{-8} (EN ISO 13849)	
T_M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	Max. 26 ms ¹⁾
Protection class	III	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	

¹⁾ Without beam coding, without blanking, no cascaded systems. Other response times, see operating instructions.

Functional data

System part	Sender	Receiver
Restart interlock	-	✓
Restart interlock (delivery status)	-	External
External device monitoring	-	✓
External device monitoring (delivery status)	-	Deactivated
Beam coding	✓	
Beam coding (delivery status)	Non-coded	
Reduced resolution (depending on type)	- / ✓	-
Extension connection (depending on type)	- / ✓	
Emergency stop / bypass at extension connection (depending on type)	-	- / ✓
Bypass (with UE402)	-	✓
Operating mode switching (with UE402)	-	✓
PSDI mode (with UE402)	✓	
Safe device communication via EFI/SDL	✓	
Configuration method	PC with CDS (configuration and diagnostic software)	

Electrical data

System part	Sender	Receiver
System connection	Hirschmann plug M26 x 11 + FE	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Extension connection (depending on type)	Hirschmann socket M26 x 11 + FE / socket M12 x 7 + FE	
Connection cable wire cross-section	M26 x 11 + FE	0.75 mm ²
	M12 x 7 + FE	0.25 mm ²
Configuration connection	M8 x 4	
Supply voltage V_S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	≤ 10 % ³⁾	
Power consumption	Max. 2 A	Max. 3 A
Safety outputs (OSSD)	Type of output	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
	Switching voltage HIGH	24 V DC ($V_S - 2.25$ V DC ... V_S)
	Switching voltage LOW	2 V DC
	Switching current	Max. 500 mA
Display elements	7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S .

C4000 Standard Guest

General data

	Sender	Receiver
Resolution (depending on type)	14 mm / 30 mm

C4000 Standard on UE10-30S safety relay

Task

Connection of a C4000 Standard/Advanced/Palletizer/Fusion safety light curtain to UE10-30S. Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready to be switched on. The system is enabled by pressing S1 (button is pressed and released). The OSSD1 and OSSD2 outputs are live and the UE10-30S is switched on. Upon the interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

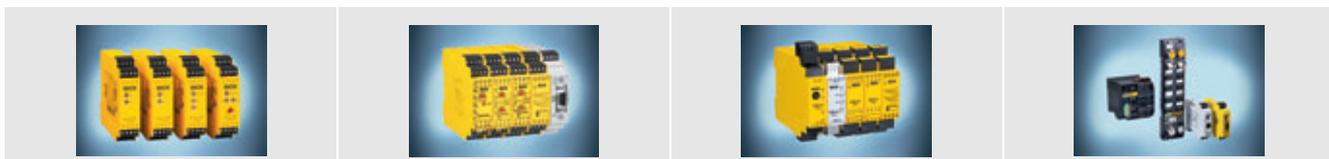

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of the

UE10-30S will be detected but will not result in the loss of the shutdown function. Jamming of the S1 button prevents the output circuit from enabling H2 lamp is illuminated if there is contamination (adjustable parameter).

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4 Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Note: The products of the C4000 ATEX II 3G/3D family are based on products of the C4000 Standard, Advanced, Entry/Exit, Palletizer and Fusion family.
For explosion-proof applications outside the European Union, other local regulations may apply.

Protective field height (depending on type)	300 mm ... 1800 mm
Scanning range (depending on type)	0 m ... 19 m
Resolution (depending on type)	20 mm / 30 mm / 40 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)
ATEX category	3G (EN 60079-0, EN 60079-15, EN 60079-28) 3D (EN 61241-0, EN 61241-1)
Enclosure rating	IP 65

Product description

The C4000 ATEX II 3G/3D safety light curtain can be used in explosive areas, zone 2 and 22.

In addition to the features of the basic C4000 family, the C4000 ATEX II 3G/3D provides the following advantages:

- No mechanical adjustments required
- Customer-friendly pre-configuration:
 - Protective cap mounted on terminal compartment
 - ATEX label on the device
 - Modified type label

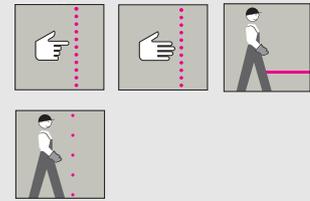

Applications

→ You can find more applications using the application finder at www.mysick.com

- Automotive industry
- Paint shops
- Wood industry
- Packaging industry / pallets

Paint line in the automotive industry

- ATEX category 3G (gas) and 3D (dust)
- Beam coding
- External device monitoring (EDM)
- Restart interlock (RES)

Enclosure rating	IP 65

Product description

The M4000 Advanced Curtain and the UE403 switching amplifier form the efficient solution for decentralized conventional muting applications involving automatic material transport that require high resolution (14/30 mm) due to a short safety distance. Access protection with muting can be achieved with maximum availability, thanks to their integrated functions, easily configured by PC via the RS-232 interface, and the simple in-situ connection of muting signals and control switches to the UE403.

The integrated functions and status and diagnostic information permit rapid commissioning and prevent unnecessary machine downtime.

The modular concept provides a high level of machine safety that takes economic efficiency into account since device properties can be adapted to meet specific requirements.

The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

- Combined with safe control solutions by SICK
- Safe integration in network solutions
- M4000 Advanced Curtain with UE403 for the connection of:
 - 2 to 4 muting sensors
 - External muting lamp
 - Reset and override control switch
 - Conveyor belt stop signal
- Additional functions:
 - Concurrence monitoring
 - Total muting time monitoring
 - Sensor gap monitoring
 - Sensor test
 - Partial blanking
 - End of muting by ESPE
 - Integrated override
- Alternative to UE403: use of e.g., UE4155

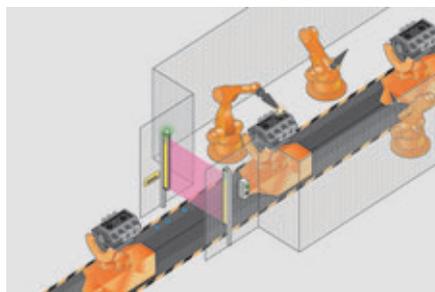

→ For more combinations, see annex

Applications

→ You can find more applications using the application finder at www.mysick.com

Provides access protection with or without muting on robot systems, machining centers in mechanical engineering applica-

tions, automated conveying storage and transport systems.

Access protection with muting on a motor machining station

Belt stop (with UE403)	-	✓
Muting with override (with UE403)	-	✓

F

Electrical data

System part	Sender	Receiver
System connection	M26 x 11 + FE Hirschmann plug	
Connecting cable wire cross-section	0.75 mm ²	
Connecting cable length	Max. 50 m ¹⁾	
Extension connection	-	Plug M12 x 5
Supply voltage V _s	24 V (19.2 V ... 28.8 V) ²⁾	
Residual ripple	± 10 %	
Power consumption	Max. 0.2 A	Max. 0.6 A
Display elements	LED/7-segment	
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored ³⁾
Switching voltage HIGH	-	24 V DC (V _S - 2.25 V ... V _S)
Switching voltage LOW	-	2 V DC
Switching current	-	0 mA ... 500 mA
Application diagnostic output		
Switching voltage HIGH	-	24 V DC (V _S - 4.2 V ... V _S)
Switching voltage LOW	-	High resistance
Switching current	-	0 mA ... 100 mA

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply of the devices must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Applies to a voltage range between -30 V and +30 V.

UE403 switching amplifier

General data

Type of muting sensors	Optical sensors, inductive sensors, mechanical switches, controller signals
Protection class	III (EN 50178:1998)
Enclosure rating	IP 65 (IEC 60529)
Safety related parameters	
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	1.0 x 10 ⁻⁸ (EN ISO 13849) ¹⁾
T _M (Mission Time)	18 years (EN ISO 13849) ¹⁾
Ambient operating temperature from ... to	-10 °C ... +55 °C
Air humidity from ... to	15 % ... 95 %, non-condensing
Storage temperature from ... to	-25 °C ... +70 °C
Vibration resistance	5 g, 10 Hz ... 55 Hz (IEC 60068-2-6)
Shock resistance	10 g, 16 ms (IEC 60068-2-29)
Housing material	Die-cast aluminum powder coated
Material, connector strip	Polyamide
Assembly	Flexible mounting to the M4000 Advanced or directly in the system

¹⁾ Only in conjunction with M4000 Advanced Curtain, M4000 Advanced or M4000 Advanced A/P

Electrical data

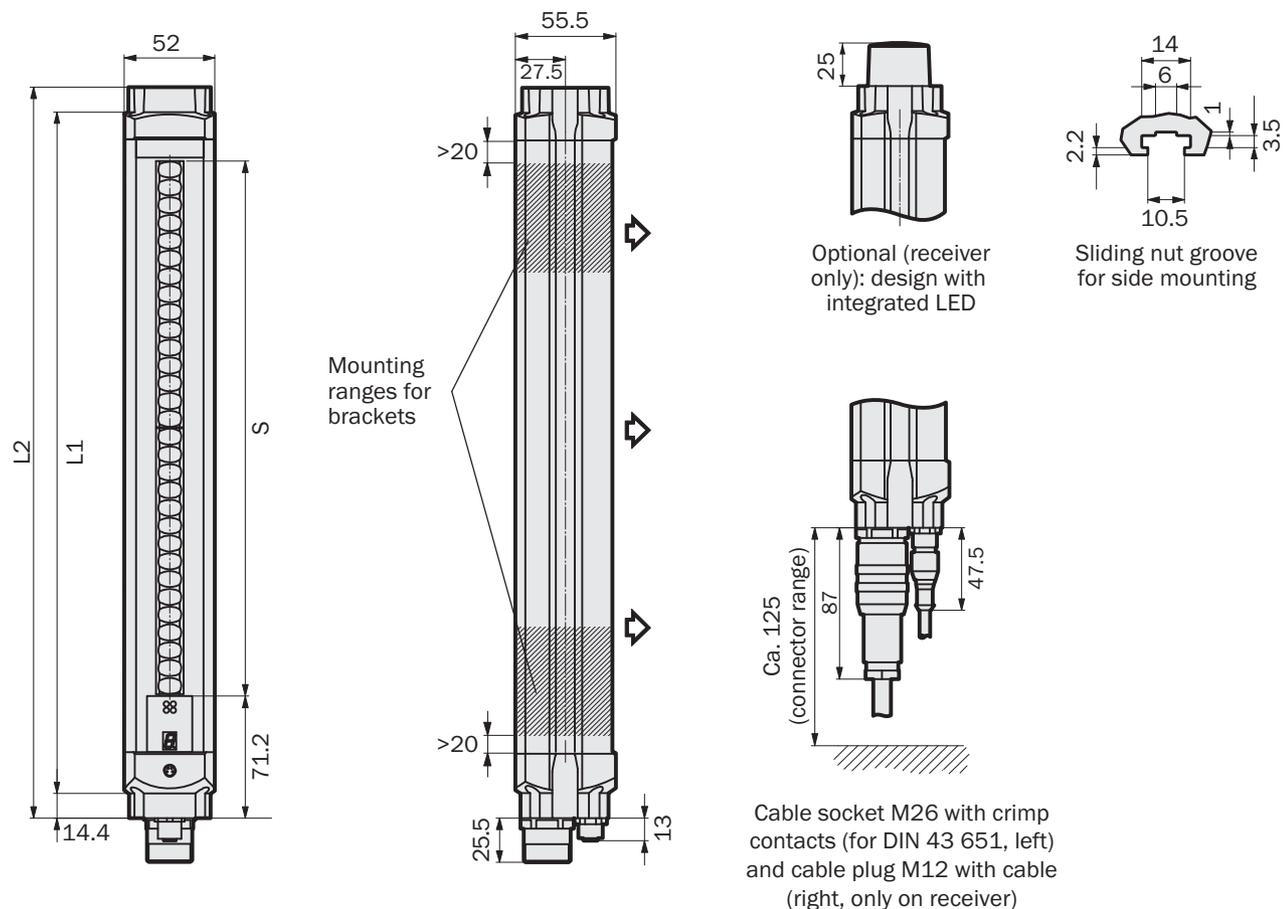

Supply voltage V_s	24 V DC (19.2 V DC ... 28.8 V DC), via connected ESPE
Power consumption	Max. 2 A
Inputs override, reset, C1, belt stop, muting sensors	
Switching voltage HIGH	24 V DC (11 V DC ... 30 V DC)
Input current HIGH	10 mA (6 mA ... 15 mA)
Switching voltage LOW	0 V DC (-30 V DC ... 5 V DC)
Input current LOW	0 mA (-0.5 mA ... 1.5 mA)
Outputs voltage supply for reset, override, C1, muting sensors	
Supply voltage	24 V DC (15 V DC ... 28.8 V DC)
Output current for muting sensors	Max. 500 mA ¹⁾
Output current for reset, override, C1	400 mA ¹⁾
Muting lamp	
Output current	Monitored 20 mA ... 400 mA, at max. 5 W power consumption Not monitored 0 mA ... 400 mA, at max. 5 W power consumption
Connection type	Socket M12 x 5
Cable length	Max. 10 m ²⁾
Wire cross-section	0.34 mm ²
Cable resistance	< 0.5 Ohm (per cable)

¹⁾ Total of all supply currents from the connections RES/OVR, A1, A2, B1 and B2 (pin 1 in each case): max. 1000 mA

²⁾ Between UE403 and M4000 Advanced / Advanced Curtain as well as between the muting sensors/control switches/muting lamp and UE403

M4000 Advanced Curtain with UE403 switching amplifier connected to UE10-30S safety relay

Task

Connection of an M4000 Advanced Curtain safety light curtain with UE403 switching amplifier to a UE10-30S safety relay. Muting with 4 photoelectric reflex switches (dark-switching, PNP). Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs are live and the UE10-30S is switched on. Upon interruption of one or several of the light beams, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

Muting and override

When the light path is clear and the muting input conditions are valid, muting starts. The H1 muting lamp illuminates. Different time and monitoring functions can be configured.

When the light path is interrupted and muting sensors are active, e.g., because of muting errors or a new power on, override is enabled by pressing and releasing the S2 button.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

The failure of one muting sensor will be detected by the muting sequence, and prohibit a new muting cycle. On manipulation (e.g., jamming) of the S2 button, the system does not enable override. A permanent use of the override function will be inhibited through the device.

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV in accordance with the requirements in EN 60204-1 / 6.4

Take note of the operating instructions of the integrated devices. This applies particularly to the use of configurable functions.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Note: C4000 Select is only available in North America!

Scanning range (depending on type)	0 m ... 8 m / 0 m ... 19 m
Protective field height (depending on type)	300 mm ... 1800 mm
Resolution (depending on type)	14 mm / 30 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (EN 62061)
Enclosure rating	IP 65

Product description

The C4000 Select safety light curtain is used for hazardous point-of-operation safeguarding applications. It is designed to provide the highest level of safety while simplifying installation and operation.

- Devices are easily configured using DIP switch technology
- Installation times are reduced using the integrated laser alignment aid
- One- and two-beam floating blanking feature allows an object to be present in the protective field, e.g., cables, work piece supports, etc.

- Cascade of additional C4000 Select safety light curtains or an S300/S3000 safety scanner simplifies integration of safety components
- Standard M12 x 5-pin connectors for both system and extendable I/O connections minimize installation costs
- Multiple systems may coexist without interference while in close proximity to one another using SICK's beam coding technology
- Simple, easy-to-understand diagnostics make troubleshooting quick and easy

General data

System part	Sender	Receiver
Resolution (depending on type)	14 mm / 30 mm	
Protective field height (depending on type)	300 mm ... 1800 mm	
Scanning range (depending on type)		
Configurable	-	✓
Resolution 14 mm	-	0 m ... 2.5 m / 0 m ... 8 m
Resolution 30 mm	-	0 m ... 8 m / 5 m ... 19 m
Safety related parameters		
Type	Type 4 (IEC 61496)	
Safety integrity level	SIL3 (IEC 61508) SILCL3 (EN 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	3.2 x 10 ⁻⁸ (EN ISO 13849)	
T _M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	Max. 26 ms ¹⁾
Synchronization	Optical, without separate synchronization	
Protection class	III (EN 50178:1998)	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	52 mm x 55.5 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	
Housing material	Aluminum alloy ALMGSI 0.5	

¹⁾ Without beam coding, without blanking, no cascaded systems. Other response times, see operating instructions.

Functional data

System part	Sender	Receiver
Beam coding	✓	
Beam coding (delivery status)	Non-coded	
Blanking	1 beam floating blanking, 2 beam floating blanking	
Delivery status	Deactivated	
Configuration method	DIP switch	
Integrated laser alignment aid	✓	
End cap with integrated LED (depending on type)	-	- / ✓

Electrical data

System part	Sender	Receiver
System connection	Plug M12 x 5	
Connecting cable length	Max. 50 m ¹⁾	
Supply voltage V_S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	$\pm 10\%$ ³⁾	
Power consumption (depending on type)	4.9 W ... 9.3 W	7.6 W ... 11.2 W
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
Switching voltage HIGH	-	24 V DC ($V_S - 2.25$ V DC ... V_S)
Switching voltage LOW	-	2 V DC
Switching current	-	Max. 500 mA
Switch off time	-	Min. 100 ms

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

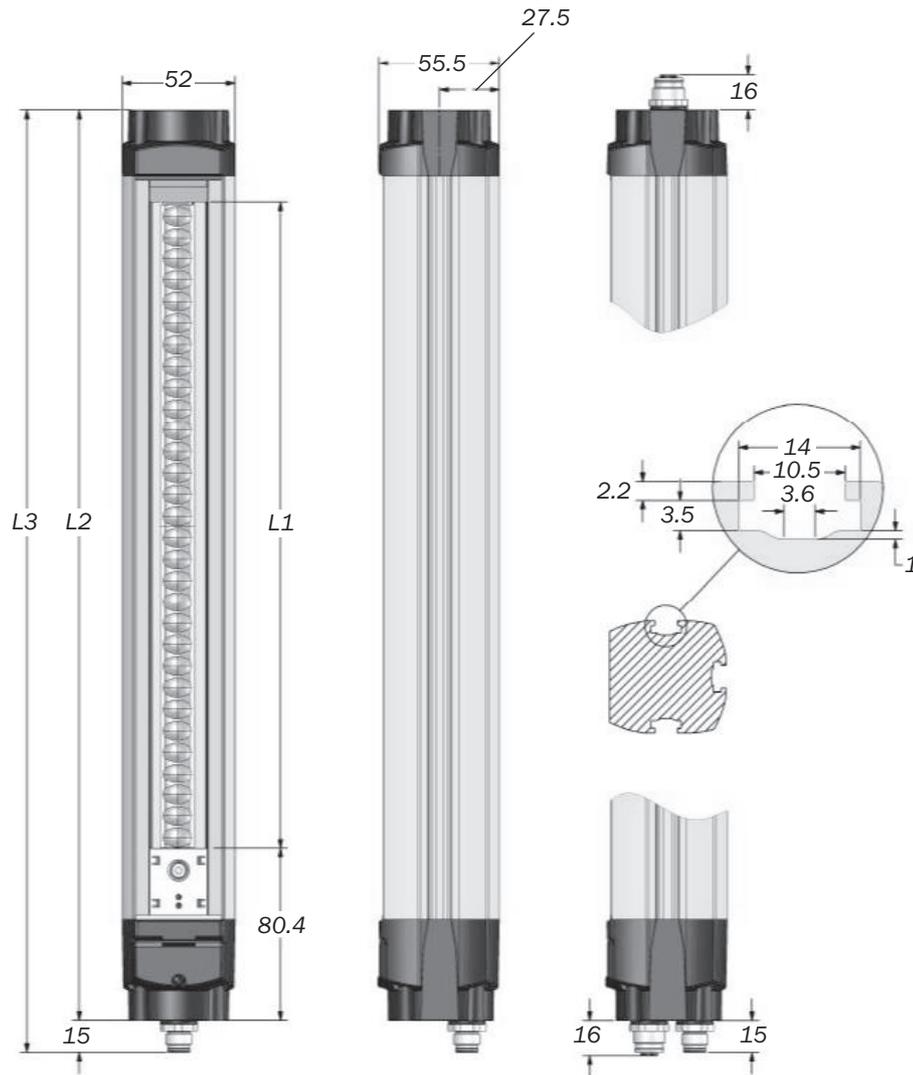

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S .

Enclosure rating	IP 65

Product description

The miniTwin4 safety light curtain is primarily used for hazardous point protection (finger and hand protection). Thanks to innovative technology, the device offers the customer significant advantages:

- Standardization of the sticks: the innovative Twin Sticks (S/R Stick) reduce the number of system components by up to 50 %. The clear advantages can be seen over the entire life cycle.
- Simplification of the service concept: the simple system construction reduces the effort for training courses and planning the service concept.
- Cost-effective machine integration: very small shape, cascading and fine graduation of the protective field lengths make flexible adaptation to the machine design possible.

- Handling: the simple, software-free commissioning is almost fully automatic. Modern industrial design combines the requirements for intuitive operation with durable appearance.
- The trend toward machines with high-quality ergonomic design places special requirements on safety light curtains. For the first time, innovative designs make it possible to use the optimal safety distance, even in positions that were critical in the past.
- Standardization of the accessories: for the first time, it is possible to use additional safety functions on a 5-core cable. Easy-to-mount brackets save space, provides simple commissioning and is a cost-effective alternative to the special solutions used in the past.

Parts supplier industry: Hazardous point protection at assembly machine

Parts-supplier industry: U-Shape like hazardous point protection at assembly machine

F

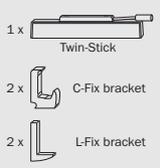

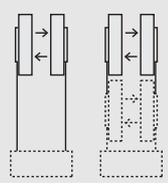

- Optimal integration due to miniaturization
- Up to 3 systems can be cascaded
- Automatic beam coding
- Alignment and diagnostics via LED display
- External device monitoring (EDM) and reset
- Configuration without PC

General data

Scanning range	Minimum	0 m ... 4 m
	Typically	0 m ... 5 m
Protective field height (depending on type)		120 mm ... 1200 mm
Safety related parameters	Type	Type 4 (IEC 61496)
	Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)
	Category	Category 4 (EN ISO 13849)
	Performance level	PL e (EN ISO 13849)
	PFHd (mean probability of a dangerous failure per hour)	Standalone system: 4.3×10^{-9} (EN ISO 13849) Cascaded systems: 1.3×10^{-8} (EN ISO 13849)
	T_M (Mission Time)	20 years (EN ISO 13849)
Response time (depending on type)		Max. 17 ms ¹⁾
Synchronization		Optical, without separate synchronization
Protection class		III (EN 61140)
Enclosure rating		IP 65
Ambient operating temperature from ... to		-20 °C ... +55 °C
Storage temperature from ... to		-25 °C ... +70 °C
Air humidity from ... to		15 % ... 95 %, non-condensing
Housing cross-section (incl. system connection)		15 mm x 32 mm
Vibration resistance		5 g (10 Hz ... 55 Hz), IEC 60068-2-6
Shock resistance		10 g, 16 s (IEC 60068-2-29)

¹⁾ Standalone devices, no cascaded systems. Other response times, see operating instructions.

Functional data

Restart interlock	✓
External device monitoring	✓
Beam coding	Automatic
Extension connection (depending on type)	✓
Configuration method	Hard wired

Electrical data

System connection	Plug M12 x 4 + FE
Connecting cable length	Max. 20 m ¹⁾
Connecting cable wire cross-section	0.34 mm ²
Supply voltage V_s	24 V DC (19.2 V DC ... 28.8 V DC)
Residual ripple	± 10 %
Switch-on time	Max. 3 s ²⁾
Display elements	LED

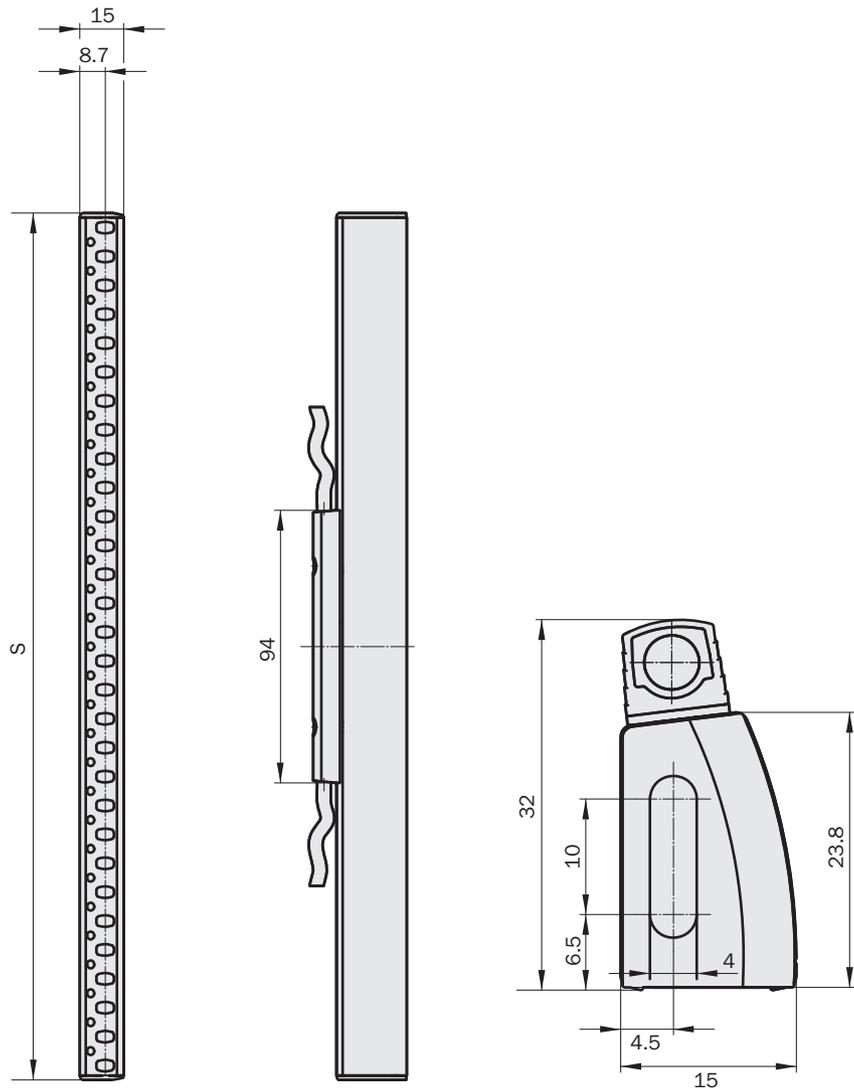

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ After applying the supply voltage

Enclosure rating	IP 65

Product description

The C4000 Micro safety light curtain is used wherever hazardous points and hazardous areas require reliable and cost-effective protection.

- Simplified machine integration in small spaces due to small, compact design
- Space-saving cable entry due to M12 connections

In-system added value

Combined with SICK safe control solutions

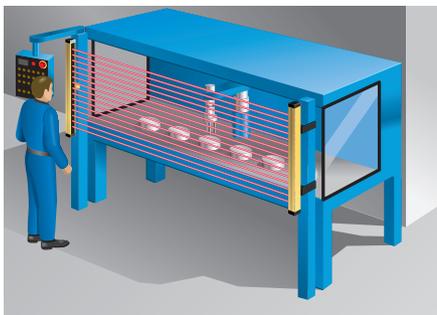

Combination with	Restart interlock	External device monitoring	Muting	Further information

C4000 Micro on UE10-30S safety relay

Task

Integration of a C4000 Micro/Basic Plus safety light curtain on UE10-30S.

Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver flashes. The system is ready to be switched on. The system is enabled by pressing S1 (button is pressed and released). The OSSD1 and OSSD2 outputs are live and the UE10-30S is switched on. Upon the interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of the UE10-30S will be detected but will not result in the loss of the shutdown function. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV in accordance with the requirements in EN 60204-1 / 6.4 Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Resistant materials	Stainless steel V4A, PMMA, PA 6
Enclosure rating	IP 69K, IP 67, IP 66, IP 65
Protective field height (depending on type)	150 mm ... 1200 mm
Scanning range (depending on type)	0 m ... 1.8 m / 0 m ... 4.5 m / 1 m ... 4 m
Resolution (depending on type)	14 mm / 30 mm
Type	Type 4 (IEC 61496-1) Type 2 (IEC 61496-2)

Product description

The IP69K Housing, in conjunction with the C4000 Micro safety light curtain, achieves an IP 69K enclosure rating. A high level of resistance against the usual cleaning agents is achieved by using suitable materials (V4A, PMMA, PA, PVC).

A compensating element (membrane) prevents the plastic tubes from misting up and liquids from entering the housing. The cable is fed into the device through the proven PG connector.

Technical data overview

Ambient operating temperature	-30 °C ... +15 °C
Resistant materials	Stainless steel, PMMA, PA 6
Enclosure rating	IP 67
Protective field height (depending on type)	600 mm / 1050 mm / 1200 mm
Scanning range (depending on type)	0 m ... 4.5 m / 1 m ... 4 m
Resolution (depending on type)	14 mm / 30 mm
Type	Type 4 (IEC 61496-1) Type 2 (IEC 61496-2)

Product description

The robust IP 67 Housing and the integrated heating transform the C4000 Micro safety light curtain into the Cold Store Curtain, making it equipped for use at low temperatures. It is therefore now possible to provide more flexible, ergonomic and process-oriented protection of access and hazardous points-of-operation in deep-freeze areas than would be achieved with

separate protective equipment such as grids or fences.

In deep-freeze distribution centers, in particular, it is important that customer-specific batch sizes are rapidly and smoothly picked.

The protection of picking places with Cold Store Curtains ensures flexible and rapid access to automatic pallet stores.

Enclosure rating	IP 65

Product description

The C4000 Basic Plus safety light curtain provides cost-effective, reliable protection of hazardous points and hazardous areas. Pre-assembled "off-the-peg" M12 × 8 cables save money and integrated functions, such as restart interlock and external device monitoring, simplify machine integration. Alignment and diagnostics using the proven 7-segment display saves more time.

- Reduced replacement costs and time: Sender and receiver can be replaced separately.

- Security of investment due to high impact resistance and resistance of the front screen to scratches
- High system availability due to tested interaction between sensor and evaluation unit
- Space-saving and compact systems due to fast response times for low safety distances
- High availability even in harsh industrial conditions due to EMC immunity

Scanning range (depending on type)	–	0 m ... 2.5 m / 0 m ... 6 m / 1 m ... 5 m
Protective field height (depending on type)	300 mm ... 1800 mm	
Safety related parameters		
Type	Type 4 (IEC 61496)	
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	1.5×10^{-8} (EN ISO 13849)	
T_M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	Max. 26 ms	
Protection class	III	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	–25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	

Functional data

System part	Sender	Receiver
Restart interlock	-	✓
Restart interlock (delivery status)	-	Deactivated
External device monitoring	-	✓
External device monitoring (delivery status)	-	Deactivated
Configuration method	Hard wired	

Electrical data

System part	Sender	Receiver
System connection	Plug M12 x 7 + FE	
Connecting cable length	Max. 15 m	
Connecting cable wire cross-section	0.25 mm ²	
Supply voltage V_s	24 V DC (19.2 V DC ... 28.8 V DC) ¹⁾	
Residual ripple	$\leq 10\%$ ²⁾	
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
Switching voltage HIGH	-	24 V DC (15 V DC ... 28.8 V DC)
Switching voltage LOW	-	2 V DC
Switching current	-	Max. 500 mA
Display elements	7-segment	

¹⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

²⁾ Within the limits of V_s .

Technical data overview

Protective field height (depending on type)	300 mm ... 1800 mm
Scanning range (depending on type)	0 m ... 2.5 m / 0 m ... 6 m / 1 m ... 5 m
Resolution (depending on type)	14 mm / 30 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The C4000 Basic safety light curtain is used wherever hazardous points and hazardous areas require reliable and cost-effective protection. It is a rugged device

designed for use in simple applications. Plus, the C4000 Basic provides alignment and diagnostics via a 7-segment display.

In-system added value

General data

System part	Sender	Receiver
Resolution (depending on type)	14 mm / 30 mm	
Scanning range (depending on type)	-	0 m ... 2.5 m / 0 m ... 6 m / 1 m ... 5 m
Protective field height (depending on type)	300 mm ... 1800 mm	
Safety related parameters		
Type	Type 4 (IEC 61496)	
Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	1.5 x 10 ⁻⁸ (EN ISO 13849)	
T _M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	Max. 26 ms
Protection class	III	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	

Functional data

System part	Sender	Receiver
External device monitoring	-	✓
External device monitoring (delivery status)	-	Deactivated
Configuration method	Hard wired	

Electrical data

System part	Sender	Receiver
System connection	Hirschmann plug M26 x 6 + FE	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Supply voltage V _S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	≤ 10 % ³⁾	
Safety outputs (OSSD)		
	Type of output	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
	Switching voltage HIGH	24 V DC (15 V DC ... 28.8 V DC)
	Switching voltage LOW	2 V DC
	Switching current	Max. 500 mA
Display elements	7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S.

Technical data overview

Protective field height (depending on type)	300 mm ... 1800 mm
Scanning range (depending on type)	0 m ... 2.5 m / 0 m ... 6 m / 1 m ... 5 m
Resolution (depending on type)	14 mm / 30 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The C4000 Eco safety light curtain reliably protects hazardous points and hazardous areas. Pre-assembled cable M12 × 5 and innovative accessories, such as the T-piece with only one cable wire to the control cabinet, save money.

The C4000 Eco also features time-saving alignment and diagnostics using the proven 7-segment display.

- Reduced replacement costs and time: Sender and receiver can be replaced separately.

- Security of investment due to high impact resistance and resistance of the front screen to scratches
- High system availability due to tested interaction between sensor and evaluation unit
- Space-saving and compact systems due to fast response times for low safety distances
- High availability even in harsh industrial conditions due to EMC immunity

C4000 Eco with T-piece on UE48-20S safety relay

Task

Connection of a C4000 Eco safety light curtain with a T-piece to a UE48-20S safety relay.

Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear, the OSSD1 and OSSD2 outputs are live. When K1 and K2 are de-energized and functioning correctly, the system is ready for switch-on and waits for an input signal/switch-on signal. The UE48-20S is switched on by pressing and releasing the S1 button. The outputs (contacts 13 - 14 and 23 - 24) energize the K1 and K2 contactors. Upon interruption of one or several of the light beams in the active protective field, the OSSD1 and OSSD2 outputs shut down the UE48-20S. The contactors K1 and K2 are de-energized.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of one of

the K1 or K2 contactors will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the UE48-20S will not re-enable the output current circuits.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) The external device monitoring is only static.
- 3) PELV in accordance with the requirements in EN 60204-1 / 6.4. Take note of the operating instructions of the integrated devices. This circuit can also be used for the UE48-30S.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Protective field height (depending on type)	900 mm ... 1500 mm
Scanning range	0.5 m ... 19 m
Resolution	20 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The C4000 Entry/Exit safety light curtain is used wherever material is automatically transported into the dangerous area in a machine and, at the same time, access by people must be reliably excluded:

- Maximum safety due to continuously active light curtain – tampering is very difficult
- Cost-effective due to savings on additional sensor systems or other protection

measures, e.g., muting sensors, muting lamp, hinged doors, etc.

- Very high availability due to self-teach distance monitoring
- Reduced mounting effort due to compact pair of sensors
- Functions can be activated without additional control device
- The integrated EFl interface allows the use of additional sensor functions (see A-8).

In-system added value

Combined with SICK safe control solutions

Applications

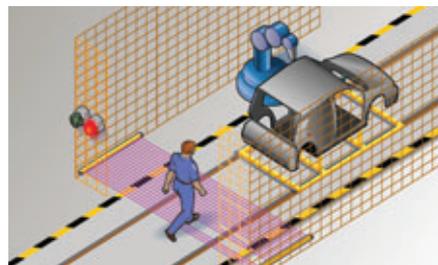

→ You can find more applications using the application finder at www.mysick.com

■ Automotive industry

Horizontal safety light curtain. No additional muting sensors required

■ Material handling

Invalid objects or asynchronous movements result in shut down

- Self-teach dynamic blanking
- External device monitoring (EDM)
- Restart interlock (RES)
- Configuration and diagnostics via PC
- Beam coding
- Multiple sampling to increase availability

Safety integrity level	SIL3 (IEC 61508) SILCL3 (IEC 62061)	
Category	Category 4 (EN ISO 13849)	
Performance level	PL e (EN ISO 13849)	
PFHd (mean probability of a dangerous failure per hour)	1.5×10^{-8} (EN ISO 13849)	
T_M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	38 ms ¹⁾
Protection class	III	
Enclosure rating	IP 65	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6	
Shock resistance	10 g, 16 ms (IEC 60068-2-29)	

¹⁾ Without beam coding, multiple sampling 3 times. Other response times, see operating instructions.

Functional data

System part	Sender	Receiver
Restart interlock	-	✓
Restart interlock (delivery status)	-	External
External device monitoring	-	✓
External device monitoring (delivery status)	-	Deactivated
Beam coding		✓
Beam coding (delivery status)	-	Non-coded
Operating mode switching (with UE402)	-	✓
Muting		Self-teach dynamic blanking
Delivery status		None
Type of self-teach dynamic blanking	-	Object pattern recognition
Safe device communication via EFI/SDL		✓
Configuration method	PC with CDS (configuration and diagnostic software)	

Electrical data

System part	Sender	Receiver
System connection	Hirschmann plug M26 x 11 + FE	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Configuration connection	M8 x 4	
Supply voltage V _S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	≤ 10 % ³⁾	
Safety outputs (OSSD)		2 PNP semiconductors, short-circuit protected, cross-circuit monitored
Type of output	-	
Switching voltage HIGH	-	24 V DC (V _S - 2.25 V DC ... V _S)
Switching voltage LOW	-	2 V DC
Switching current	-	Max. 500 mA
Display elements	7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S.

Enclosure rating	IP 65

Product description

The C4000 Palletizer safety light curtain is the innovative muting alternative for access protection during automatic material transport.

- Economical: only one sensor pair provides cost savings during planning, design, mounting, wiring and service
- Quickly placed in operation so that pallets, mesh crates, etc., are recognized without programming

- Very high availability due to self-teach recognition of patterns on loading with different pallets
- Easily integrated: no secondary sensors necessary, only the OSSDs are implemented in the stop circuit
- Safer: provides protection in areas in which there is no object, unlike conventional muting solutions.
- The integrated EFI interface allows the use of additional sensor functions (see A-8).

	C4000 Palletizer Standard	C4000 Palletizer Advanced
Detected objects	Packages (min. size of 500 mm)	Pallets, mesh crates, mesh carriage or packages (max. size of 240 m)
Pattern recognition	By size and solid shape of package	Using size and number of objects (min. 2) and monitoring the distance between them
Automatic teach-In	✓	✓
Resolution	40 mm	30 mm

Electrical data

System part	Sender	Receiver
System connection	Hirschmann plug M26 x 11 + FE	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Extension connection (depending on type)	-	Hirschmann socket M26 x 11 + FE
Configuration connection	M8 x 4	
Supply voltage V_S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	$\leq 10\%$ ³⁾	
Power consumption	Max. 1 A	Max. 1.8 A
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
Switching voltage HIGH	-	24 V DC ($V_S - 2.25$ V DC ... V_S)
Switching voltage LOW	-	2 V DC
Switching current	-	Max. 500 mA
Switch off time	-	Min. 1000 ms
Display elements	7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

³⁾ Within the limits of V_S .

Product description

The C4000 Fusion safety light curtain provides a variety of functions and expands the field of applications for safety light curtains. It is qualified for compact muting without additional sensors, as well as for highly available hazardous point and area protection. In harsh ambient conditions, the Fusion provides maximum uptime while virtually eliminating false trips.

- **Reliable:** flying wood chips or small debris are filtered, preventing annoying false trips
- **Simple:** for access protection with automated material transport, the C4000 Fusion differentiates between man and material
- **Available:** while skids are being detected, sporadic objects like cables are suppressed

- **Cost-effective:** only one sender / receiver pair, ensuring cost savings during mounting, wiring and service
- **Easily integrated:** no secondary muting sensors necessary, only the OSSDs are implemented
- **Safe:** provides protection in areas in which there is no object, unlike conventional muting solutions
- **Flexible:** individually adjustable to local conditions: sequence monitoring of defined objects of almost any size
- **Position monitoring:** using two single beams out of the curtain
- **The integrated EFl interface** allows the use of additional sensor functions (see A-8).

Applications

→ You can find more applications using the application finder at www.mysick.com

- Machine tools
- Automotive and other vehicles

Hazardous point protection available regardless of dirt or chips

- Storage and conveyor technology
- Wood industry

Horizontal safety light curtain. No additional muting sensors required

- Reliable hand protection
- Area protection in dirty environments
- Customized access protection with differentiation between man and material
- Reduced resolution
- Fixed blanking
- 2 virtual photoelectric switches
- Multiple sampling
- Integrated laser alignment

C4000 Fusion on UE10-30S safety relay

F

Task

Connection of a C4000 Standard/Advanced/Palletizer/Fusion safety light curtain to UE10-30S. Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on. The system is enabled by pressing S1 (button is pressed and released). The OSSD1 and OSSD2 outputs are live and the UE10-30S is switched on. Upon interruption of one or several of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the

UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits. H2 lamp is illuminated if there is contamination (adjustable parameter).

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4 Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Safety integrity level	SIL2 (IEC 61508), SILCL2 (IEC 62061)
Enclosure rating	IP 65

Product description

The miniTwin2 safety light curtain is primarily used for hazardous point protection (finger and hand protection). Thanks to innovative technology, the device offers the customer significant advantages:

- Standardization of the sticks: the innovative Twin Sticks (S/R Stick) reduce the number of system components by up to 50 %. The clear advantages can be seen over the entire life cycle.
- Simplification of the service concept: the simple system construction reduces the effort for training courses and planning the service concept.
- Cost-effective machine integration: very small shape, cascading and fine graduation of the protective field lengths make possible flexible adaptation to the machine design.

- Handling: the simple, software-free commissioning is almost fully automatic. Modern industrial design combines the requirements for intuitive operation with durable appearance.

- The trend toward machines with high quality ergonomic design places special requirements on safety light curtains. For the first time, innovative ideas make it possible to use the optimal safety distance even in positions that were critical in the past.

- Standardization of the accessories: for the first time, innovative solutions make it possible to use additional safety functions on a 5-core cable. Easy to mount brackets ensure space-saving, simple commissioning and provide a cost-effective alternative to the special solutions used in the past.

General data

Scanning range	0 m ... 6 m
Protective field height (depending on type)	120 mm ... 1200 mm
Safety related parameters (depending on type)	
Type	Type 2 (IEC 61496)
Safety integrity level	SIL2 (IEC 61508) SILCL2 (IEC 62061)
Category	Category 2 (EN ISO 13849)
Test rate (internal test)	Standalone system: 58/s (EN ISO 13849) Cascaded systems: 47/s (EN ISO 13849)
Maximum demand rate	Standalone system: 34/min (EN ISO 13849) ¹⁾ Cascaded systems: 28/min (EN ISO 13849) ¹⁾
Performance level	PL d (EN ISO 13849), pay attention to optical characteristics! ²⁾
PFHd (mean probability of a dangerous failure per hour)	Standalone system: 2.4×10^{-8} (EN ISO 13849) Cascaded systems: 5.2×10^{-8} (EN ISO 13849)
T_M (Mission Time)	20 years (EN ISO 13849)
Response time (depending on type)	Max. 17 ms ³⁾
Synchronization	Optical, without separate synchronization
Protection class	III (EN 61140)
Enclosure rating	IP 65
Ambient operating temperature from ... to	-20 °C ... +55 °C
Storage temperature from ... to	-25 °C ... +70 °C
Air humidity from ... to	15 % ... 95 %, non-condensing
Housing cross-section (incl. system connection)	15 mm x 32 mm
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 60068-2-6
Shock resistance	10 g, 16 s (IEC 60068-2-29)

¹⁾ Between two demands on a safety-related response of the device at least 100 internal or external tests must be carried out.

²⁾ The performance level does not contain any specific requirements on aspects such as the optical characteristics.
For more detailed information on this topic see page A-10

³⁾ Standalone devices, no cascaded systems. Other response times, see operating instructions.

Functional data

Restart interlock	✓
External device monitoring	✓
Beam coding	Automatic
Extension connection (depending on type)	✓
Configuration method	Hard wired

Electrical data

System connection	Plug M12 x 4 + FE
Connecting cable length	Max. 20 m ¹⁾
Connecting cable wire cross-section	0.34 mm ²
Supply voltage V _s	24 V DC (19.2 V DC ... 28.8 V DC)
Residual ripple	± 10 %
Switch-on time	Max. 3 s ²⁾
Display elements	LED

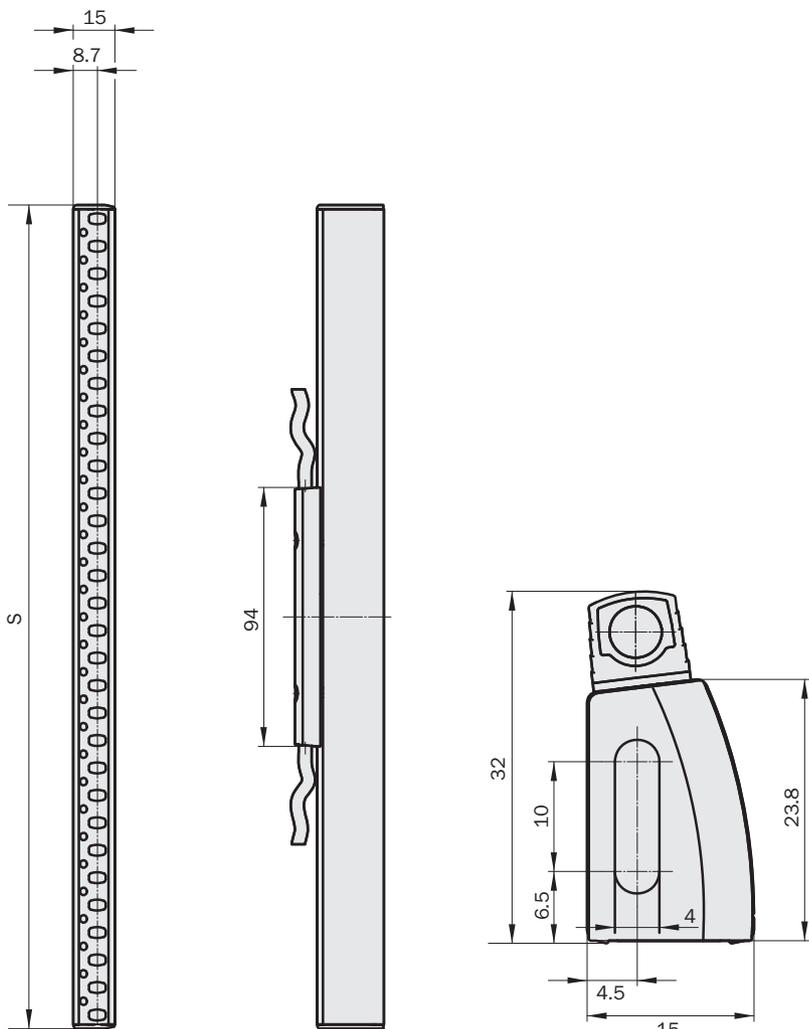

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ After applying the supply voltage

Enclosure rating	IP 65

Product description

With its high signal reserve, the C2000 Standard safety light curtain is also reliable under harsh industrial conditions. Functions and status information integrated in the device allows rapid commissioning and prevents unnecessary machine downtime. Its modular design achieves maximum machine safety while taking into account

economic considerations by precisely coordinating the characteristics of the device to the requirements. Safe control solutions and service concepts complete the product range to provide an ideal solution.

General data

System part	Sender	Receiver
Resolution (depending on type)	20 mm / 30 mm / 40 mm	
Scanning range (depending on type)	0 m ... 6 m / 2.5 m ... 19 m	-
Protective field height (depending on type)	150 mm ... 1800 mm	
Safety related parameters		
Type	Type 2 (IEC 61496)	
Safety integrity level	SIL2 (IEC 61508) SILCL2 (IEC 62061)	
Category	Category 2 (EN ISO 13849)	
Test rate (internal test)	13/s (EN ISO 13849)	
Maximum demand rate	8/min (EN ISO 13849) ¹⁾	
Performance level	PL d (EN ISO 13849), pay attention to optical characteristics! ²⁾	
PFHd (mean probability of a dangerous failure per hour)	2.2 x 10 ⁻⁸ (EN ISO 13849)	
T _M (Mission Time)	20 years (EN ISO 13849)	
Response time (depending on type)	-	Max. 34 ms
Synchronization	Optical, without separate synchronization	
Protection class	III	
Enclosure rating	IP 65 (EN 60529)	
Ambient operating temperature from ... to	0 °C ... +55 °C	
Storage temperature from ... to	-25 °C ... +70 °C	
Air humidity from ... to	15 % ... 95 %, non-condensing	
Housing cross-section (depending on type)		
Protective field heights 150 mm to 1200 mm	34 mm x 29 mm	
Protective field heights 1350 mm to 1800 mm	48 mm x 40 mm	
Vibration resistance	5 g (10 Hz ... 55 Hz), IEC 68-2-6	
Shock resistance	10 g, 16 ms (IEC 68-2-29)	

¹⁾ Between two demands on a safety-related response of the device at least 100 internal or external tests must be carried out.

²⁾ The performance level does not contain any specific requirements on aspects such as the optical characteristics.
For more detailed information on this topic, see page A-10.

Functional data

System part	Sender	Receiver
External device monitoring	-	✓
Beam coding		✓
Configuration method	Hard wired	

Electrical data

System part	Sender	Receiver
System connection	Plug M12 x 8	
Connecting cable length	Max. 15 m ¹⁾	
Connecting cable wire cross-section	0.25 mm ²	
Supply voltage V_S	24 V DC (19.2 V DC ... 28.8 V DC) ²⁾	
Residual ripple	≤ 5 %	
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored
Switching voltage HIGH	-	Min. $V_S - 2.25$ V DC
Switching current	-	Max. 500 mA
Display elements	LED/7-segment	

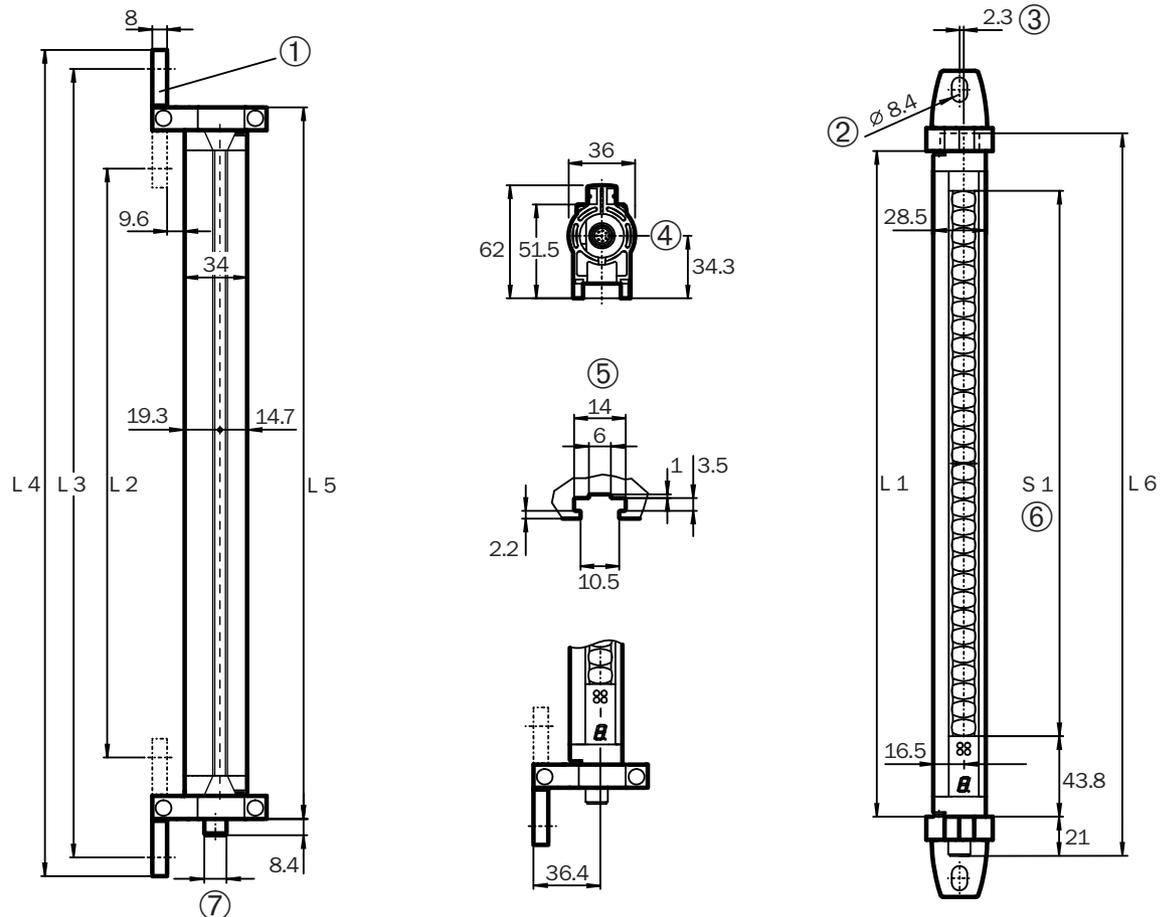

¹⁾ The length of the connecting cable is limited, because wire resistance is max. 4 Ohm.

²⁾ Upper and lower limit values of voltage supply not be infringed.

C2000 Standard on UE10-30S safety relay

Task

Connection of a C2000 Standard safety light curtain to UE10-30S. Operating mode: without restart interlock and with external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the system is enabled. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On the interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4 Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Technical data overview

Resistant materials	Stainless steel V4A, PMMA, PA 6
Enclosure rating	IP 69K, IP 67, IP 66, IP 65
Protective field height (depending on type)	150 mm ... 1200 mm
Scanning range (depending on type)	0 m ... 4.5 m / 2.5 m ... 14.5 m
Resolution	30 mm
Type	Type 2 (IEC 61496)

Product description

The IP69K housing in conjunction with the C2000 safety light curtain achieves the enclosure rating IP 69K. A high level of resistance against the usual cleaning agents is achieved by using suitable mate-

rials (V4A, PMMA, PA, PVC). A compensating element (membrane) prevents the plastic tubes from misting up and the entry of liquids. The cable is fed into the device through the proven PG connector.

C2000 Standard on UE10-30S safety relay

Task

Connection of a C2000 Standard safety light curtain to UE10-30S. Operating mode: without restart interlock and with external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the system is enabled. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4 Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

With its high signal reserve, the C2000 Eco safety light curtain is also reliable under harsh industrial conditions. The C2000 Eco is designed for guard only function, but no additional functionality. The LED status indicator shows the status of the OSSDs and the supply voltage.

The light curtain is mounted with a low-cost side bracket. The 5-pole cable is another option to optimize expenses. Safe control solutions and service concepts complete the product range to provide an ideal solution.

C2000 Eco with T-piece on UE48-20S safety relay

F

Task

Connection of a C2000 Eco safety light curtain with a T-piece to a UE48-20S safety relay. Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear, the OSSD1 and OSSD2 outputs are live. When K1 and K2 are de-energized and functioning correctly, the system is ready for switch-on and waits for an input signal/switch-on signal. The UE48-20S is switched on by pressing and releasing the S1 button. The outputs (contacts 13 - 14 and 23 - 24) energize the K1 and K2 contactors. On interruption of one or several of the light beams in the active protective field, the OSSD1 and OSSD2 outputs shutdown the UE48-20S. The contactors K1 and K2 are de-energized.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of one of

the contactors K1 or K2 will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the UE48-20S will not re-enable the output current circuits.

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) The external device monitoring is only static.

3) PELV in accordance with the requirements in EN 60204-1 / 6.4

Take note of the operating instructions of the integrated devices.

This circuit can also be used for the UE48-30S.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

With its high signal reserve, the C2000 RES/EDM safety light curtain is also reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime. The modular design provides

maximum machine safety while taking into account economic considerations by precisely coordinating the characteristics of the device to the requirements.

Safe control solutions and service concepts complete the product range to provide an ideal solution.

C2000 RES/EDM on UE10-30S safety relay

Task

Integration of a C2000 RES/EDM safety light curtain on UE10-30S. Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver flashes. The system is ready to be switched on. The system is enabled by pressing S1 (button is pressed and released). The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

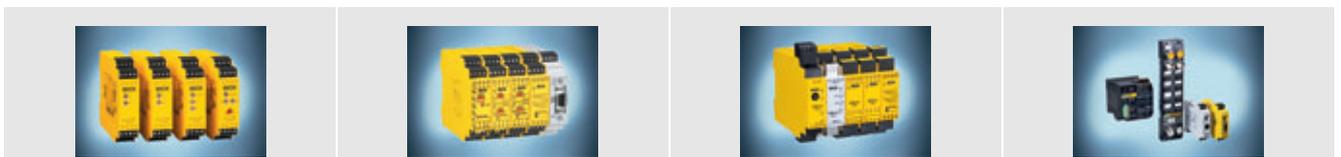

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of the

UE10-30S will be detected and will not result in the loss of the shutdown function. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4. Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Safety integrity level	SIL2 (IEC 61508), SILCL2 (IEC 62061)
Enclosure rating	IP 65

Product description

With its high signal reserve, the C2000 Cascadable safety light curtain is also reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime.

The modular design provides maximum machine safety while taking into account economic considerations by precisely co-

ordinating the characteristics of the device to the requirements.

Safe control solutions and service concepts complete the product range to provide an ideal solution for the sector.

With the cascadable variants, safety light curtains can be flexibly adapted to the existing installation situation.

C2000 Cascadable on UE10-30S safety relay

F

Task

Connection of two cascaded C2000 Cascadable safety light curtains to UE10-30S.

Operating mode: without restart interlock and with external device monitoring. Restart interlock is realized via the machine control.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the system is enabled. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On the interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4
Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Multiple light beam safety devices

Principle of operation of multiple light beam safety devices

Multiple light beam safety devices are electro-sensitive protective devices comprising a sender unit and a receiver unit or a sender/receiver unit on the active side and one or more deflector mirrors on the passive side. If one or more light beams are

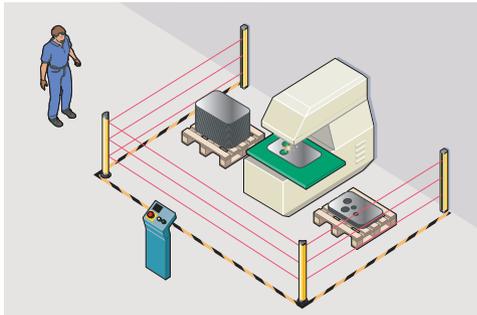

interrupted, the multiple light beam safety device provides a shutdown signal that is suitable for interrupting the dangerous state on a machine or system.

Applications for multiple light beam safety devices

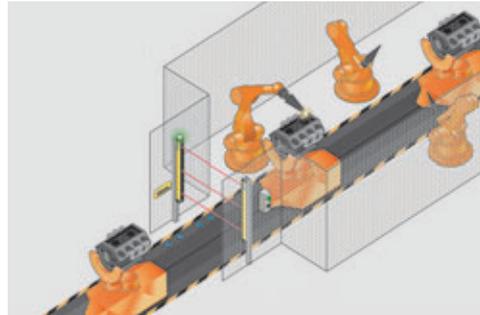

Multiple light beam safety devices are used wherever access to a hazardous area must be protected or the hazardous area itself must be monitored. In some applications, the protective

device must be able to unambiguously differentiate between man and material.

G

Machine tool industry: M4000 Standard with mirror column for multi-sided access protection on a punching machine

Automotive industry: M4000 Advanced with UE403 for access protection with muting on a motor machining station

Advantages of the SICK multiple light beam safety device

SICK's range of multiple light beam safety devices provides a reliable, cost-effective solution for almost every hazardous area protection and access protection application. Customized solutions are produced using standard components that are flexible in use: from simple access protection to the complex muting application with direction monitoring, belt stop and override function.

The M4000 Standard and/or Advanced can be used for access protection and M4000 Area for hazardous area protection (horizontal use) if a type 4 multiple light beam safety device is required. M4000 Advanced, in combination with the UE403 switching amplifier, offers a comfortable, decentralized muting

solution where automatic material transport in and out of the hazardous area is required. In warehouse and conveyor systems, the M4000 Advanced with UE403 not only complies with safety requirements, but also provides highly efficient automatic material transport.

The M2000 is the right choice for applications where a type 2 multiple light beam safety device is desired. Product variants with differing functionalities are available for countless applications. The use of SICK interfaces also offers numerous advantages. The M2000 variants in IP69K housings were designed for environments in which very high demands are made of the enclosure rating (IP 69K) and the material strength.

Mounting and operation made easy

SICK provides a comprehensive range of accessories for multiple light beam safety devices. These accessories make it possible to integrate the devices in the machine control and also to

mount the devices rapidly, reliably and safely. Device and mirror columns offer an efficient solution to create multi-sided access protection with minimum assembly.

Services for productive safety

With services tailored specifically to your needs, SICK offers complete support for the safety of your machine or system.

Address productivity and cost-effectiveness from the start: from selection and planning, through commissioning and inspection, to maintenance and modernization.

→ For information about the services please refer to chapter B

¹⁾ Muting with UE403 switching amplifier

²⁾ Passive side using deflector mirror/deflector unit

³⁾ Muting with Flexi Classic safety controller

→ Suitable mirror columns and device columns can be found in chapter I

- Restart interlock (RES)
- External device monitoring (EDM)
- Beam coding
- LED/7-segment display
- Application diagnostic output (ADO)
- Configuration and diagnostics via PC
- SDL interface
- Muting configurable in conjunction with UE403
- A/P (active/passive) variant
- Integrated laser alignment aid (optional)
- End cap with integrated LED (optional)

Technical data overview

Scanning range (depending on type)	0.5 m ... 70 m / 4.5 m / 7.5 m
Number of beams (depending on type)	2 ... 8
Beam separation (depending on type)	220 mm ... 600 mm
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Enclosure rating	IP 65

Product description

The M4000 Advanced multiple light beam safety device and the UE403 switching amplifier form the efficient solution for decentralized conventional muting applications involving automatic material transport.

Access protection with muting can be achieved with maximum availability, easily configured by PC via the RS-232 interface, and the simple in-situ connection of muting signals and control switches to the UE403. The integrated functions and status and diagnostic information permit rapid commissioning and prevent unnecessary machine downtime.

The modular concept provides a high level of machine safety that takes economic efficiency into account since device properties can be adapted to meet specific requirements. This is especially the case for the M4000 Advanced A/P (active/passive) variants, since only one requires electrical connection – considerably simplifying installation and cutting costs.

The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

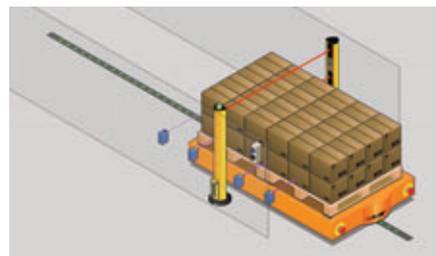

- Combined with safe control solutions by SICK
- Safe integration in network solutions
- M4000 Advanced with UE403 for the connection of:
 - 2 to 4 muting sensors
 - External muting lamp
 - Reset and override control switch
 - Conveyor belt stop signal
- Additional functions:
 - Concurrence monitoring
 - Total muting time monitoring
 - Sensor gap monitoring
 - Sensor test
 - Partial blanking
 - Muting end via ESPE
 - Integrated override
- Alternative to UE403: use of e.g., UE4155

→ For more combinations, see annex

Applications

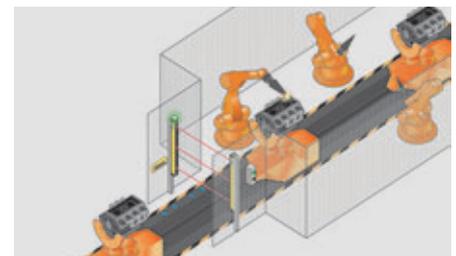

→ You can find more applications using the application finder at www.mysick.com

Provides access protection of hazardous areas on machining centers in mechanical engineering applications, robot systems

Access protection with partial blanking on a system with floor transporter

(such as welding lines in the automotive industry) and automated conveying, storage and transport systems.

Access protection with muting on a motor machining station

Electrical data

System part	Sender	Receiver
System connection	M26 x 11 + FE Hirschmann plug	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Extension connection	-	Plug M12 x 5
Supply voltage V_s	24 V (19.2 V ... 28.8 V) ²⁾	
Residual ripple	± 10 %	
Power consumption	Max. 0.2 A	Max. 0.6 A
Display elements	LED/7-segment	
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored ³⁾
Switching voltage HIGH	-	24 V DC ($V_S - 2.25 V \dots V_S$)
Switching voltage LOW	-	2 V DC
Switching current	-	0 mA ... 500 mA
Application diagnostic output		
Switching voltage HIGH	-	24 V DC ($V_S - 4.2 V \dots V_S$)
Switching voltage LOW	-	High resistance
Switching current	-	0 mA ... 100 mA

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204.

³⁾ Applies to a voltage range between -30 V and +30 V.

M4000 Advanced A/P

UE403 switching amplifier

General data

Type of muting sensors	Optical sensors, inductive sensors, mechanical switches, controller signals
Protection class	III (EN 50178:1998)
Enclosure rating	IP 65 (IEC 60529)
Safety related parameters	
Type	Type 4 (IEC 61496)
Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	1.0×10^{-8} (EN ISO 13849) ¹⁾
T _M (Mission Time)	18 years (EN ISO 13849) ¹⁾
Ambient operating temperature from ... to	-10 °C ... +55 °C
Air humidity from ... to	15 % ... 95 %, non-condensing
Storage temperature from ... to	-25 °C ... +70 °C
Vibration resistance	5, 10 ... 55 (IEC 60068-2-6)
Shock resistance	10 g, 16 ms (IEC 60068-2-29)
Housing material	Die-cast aluminum powder coated
Material, connector strip	Polyamide
Assembly	Flexible mounting to the M4000 Advanced or directly in the system

¹⁾ Only in conjunction with M4000 Advanced or M4000 Advanced A/P

Electrical data

Supply voltage V _s	24 V DC (19.2 V DC ... 28.8 V DC), via connected ESPE
Power consumption	Max. 2 A
Inputs override, reset, C1, belt stop, muting sensors	
Switching voltage HIGH	24 V DC (11 V DC ... 30 V DC)
Input current HIGH	10 mA (6 mA ... 15 mA)
Switching voltage LOW	0 V DC (-30 V DC ... 5 V DC)
Input current LOW	0 mA (-0.5 mA ... 1.5 mA)
Outputs voltage supply for reset, override, C1, muting sensors	
Supply voltage	24 V DC (15 V DC ... 28.8 V DC)
Output current for muting sensors	Max. 500 mA ¹⁾
Output current for reset, override, C1	400 mA ¹⁾
Muting lamp	
Output current	Monitored 20 mA ... 400 mA at max. 5 W power consumption Not monitored 0 mA ... 400 mA at max. 5 W power consumption
Connection type	Socket M12 x 5
Cable length	Max. 10 m ²⁾
Wire cross-section	0.34 mm ²
Cable resistance	< 0.5 Ohm (per cable)

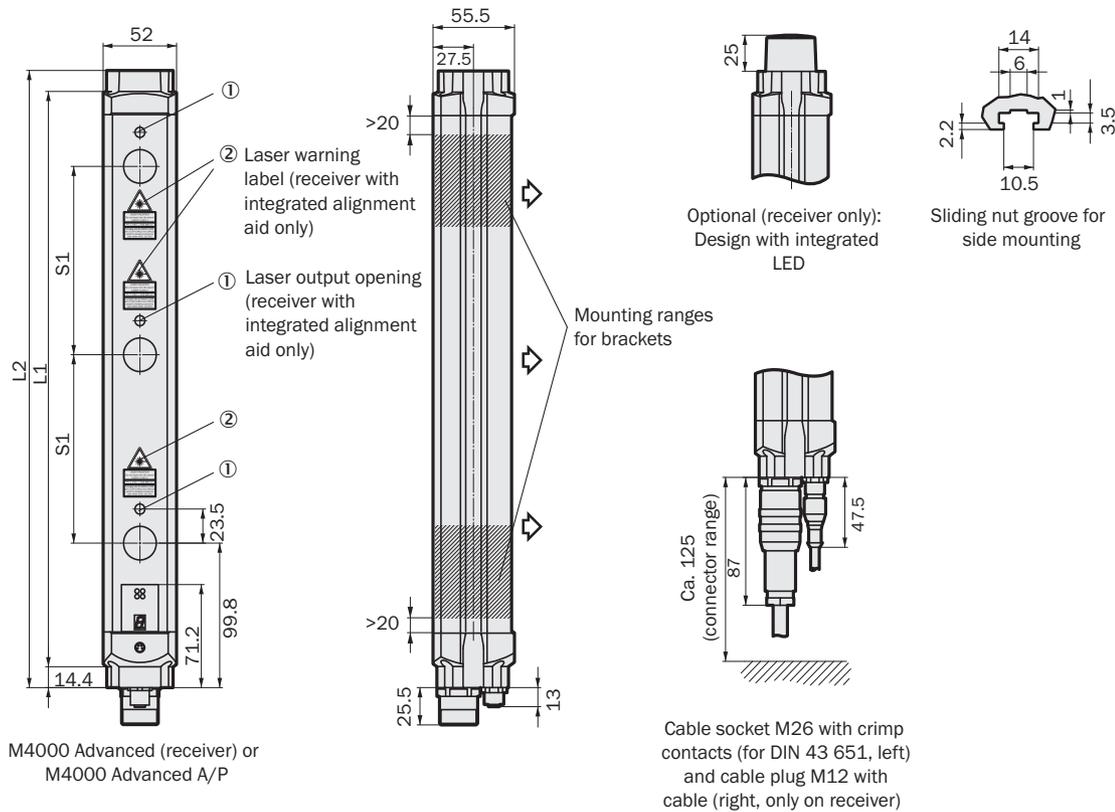

¹⁾ Total of all supply currents from the connections RES/OVR, A1, A2, B1 and B2 (pin 1 in each case): max. 1000 mA

²⁾ Between UE403 and M4000 Advanced / Advanced Curtain as well as between the muting sensors/control switches/muting lamp and UE403

M4000 Advanced with UE403 switching amplifier connected to UE10-30S safety relay

Task

Connection of an M4000 Advanced multiple light beam safety device with UE403 switching amplifier to a UE10-30S safety relay.

Muting with 4 photoelectric reflex switches (dark-switching, PNP).

Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one or several of the light beams, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

Muting and override

When the light path is clear and the muting input conditions are valid, muting starts. The H1 muting lamp illuminates. Different time and monitoring functions can be configured.

When the light path is interrupted and muting sensors are active, e.g., because of muting errors or a new power on, override is enabled by pressing and releasing the S2 button.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

The failure of one muting sensor will be detected by the muting sequence and prohibit a new muting cycle. On manipulation (e.g., jamming) of the S2 button, the system does not enable override. A permanent use of the override function will be inhibited through the device.

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV in accordance with the requirements in EN 60204-1 / 6.4

Take note of the operating instructions of the integrated devices. This applies particularly to the use of configurable functions.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

The M4000 Standard multiple light beam safety device is the solution for one-sided or multi-sided access protection. Efficient perimeter guarding solutions with maximum availability are created due to the M4000's high optical range and comprehensive functions, which are easily configured via buttons. The integrated functions and status information ensure rapid com-

missioning and help to minimize machine downtime. The modular concept cost-effectively achieves maximum machine safety by coordinating the characteristics of the device precisely to the users' requirements. Interfaces and service concepts complete the product range to give an ideal industrial solution.

In-system added value

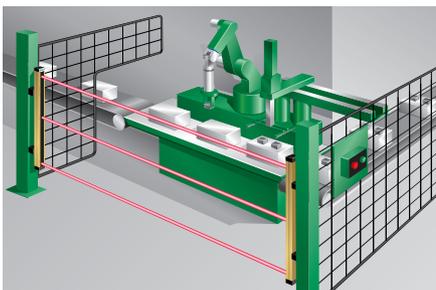

- Combined with SICK safe control solutions
- Safe integration in network solutions
- Direct integration in AS-Interface Safety at Work bus systems

→ For more combinations; see annex

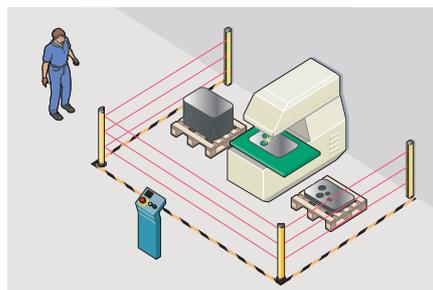

Applications

→ You can find more applications using the application finder at www.mysick.com

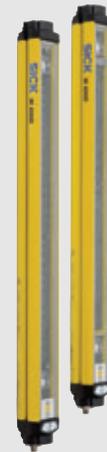

- Machine tool industry
- Storage and conveyor
- Packaging industry
- Stone production
- Automotive industry

M4000 Standard on a packaging machine

M4000 Standard with mirror columns on a punching machine

- Housing with 3 nut grooves
- Configuration buttons
- Restart interlock (RES)
- External device monitoring (EDM)
- Beam coding
- LED/7-segment display
- Application diagnostic output (ADO)
- Integrated laser alignment aid (optional)
- End cap with integrated LED (optional)
- Separate reset connection for receiver (optional)

M4000 Standard connected to UE10-30S safety relay

G

Task

Connection of an M4000 Standard multiple light beam safety device to a UE10-30S safety relay.
Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one or several of the light beams, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

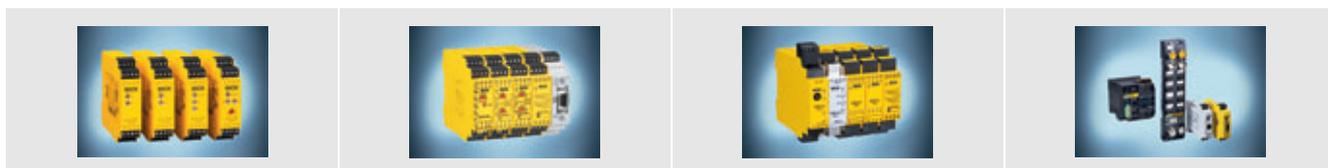

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) PELV in accordance with the requirements in EN 60204-1 / 6.4
Take note of the operating instructions of the integrated devices.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

The M4000 Area multiple light beam safety device is the efficient solution for area protection or for preventing employees standing behind the point-of-operation protection. Area protection can be achieved with maximum availability thanks to its long range and integrated functions, easily con-

figured by PC via the RS-232 interface. The integrated functions, status and diagnostic information permit rapid commissioning and prevent unnecessary machine downtime.

The integrated EFI interface allows the use of additional sensor functions (see A-8).

In-system added value

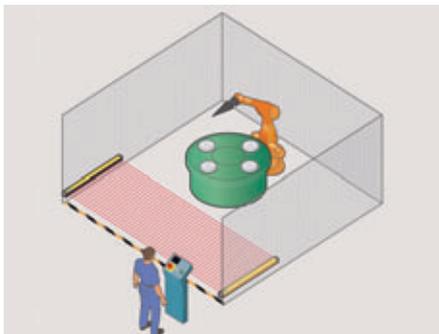

Combined with SICK safe control solutions

→ For more combinations, see annex

Applications

→ You can find more applications using the application finder at www.mysick.com

Provides area protection or point-of-operation guarding of a hazardous point, e.g., on robots, machining centers in mechanical

Hazardous area protection with M4000 Area on a robot

engineering applications or on paper roll machines.

Point-of-operation guarding with M4000 Area at an output conveyor in the automotive industry

- 60 or 80 mm resolution
- Restart interlock (RES)
- External device monitoring (EDM)
- Beam coding
- LED/7-segment display
- Application diagnostic output (ADO)
- Configuration and diagnostics via PC
- SDL interface

Electrical data

System part	Sender	Receiver
System connection	M26 x 11 + FE Hirschmann plug	
Connecting cable length	Max. 50 m ¹⁾	
Connecting cable wire cross-section	0.75 mm ²	
Supply voltage V _S	24 V (19.2 V ... 28.8 V) ²⁾	
Residual ripple	± 10 %	
Power consumption	Max. 0.2 A	Max. 0.6 A
Safety outputs (OSSD)		
Type of output	-	2 PNP semiconductors, short-circuit protected, cross-circuit monitored ³⁾
Switching voltage HIGH	-	24 V DC (V _S - 2.25 V ... V _S)
Switching voltage LOW	-	2 V DC
Switching current	-	0 mA ... 500 mA
Application diagnostic output		PNP semiconductor, short-circuit protected
Switching voltage HIGH	-	24 V DC (V _S - 4.2 V ... V _S)
Switching voltage LOW	-	High resistance
Switching current	-	0 mA ... 100 mA
Display elements	LED/7-segment	

¹⁾ Depending on load, power supply and wire cross-section. The technical specifications must be observed.

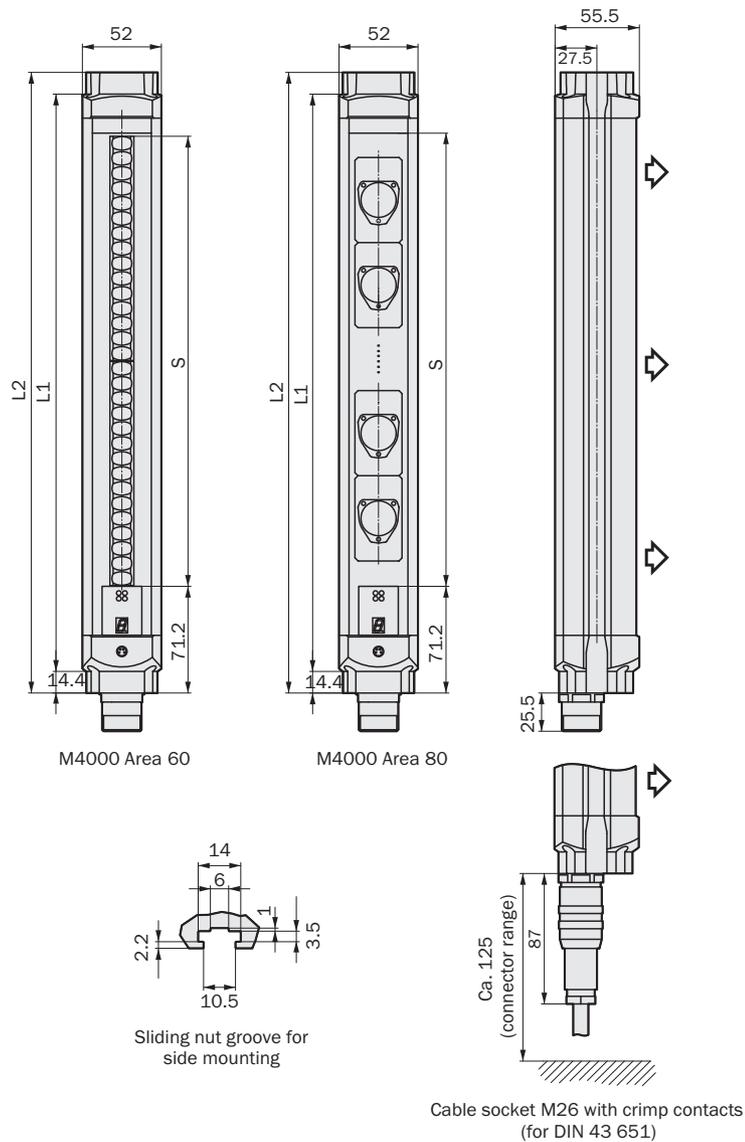

²⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204.

³⁾ Applies to a voltage range between -30 V and +30 V.

M4000 Area connected to UE10-30S safety relay

Task

Connection of an M4000 Area multiple light beam safety device to a UE10-30S safety relay.

Operating mode: with restart interlock and external device monitoring.

Operating characteristics

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one or several of the light beams, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

If the optics are dirty, H2 indicator illuminates.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV in accordance with the requirements in EN 60204-1 / 6.4

Take note of the operating instructions of the integrated devices. This applies particularly to the use of configurable functions.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

With its high signal reserve, the M2000 Standard multi-beam photoelectric safety switch is also reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime. The modular concept

cost-effectively achieves maximum machine safety by precisely coordinating the characteristics of the device to the users' requirements. Interfaces and service concepts complete the product range to provide an ideal solution for the application.

M2000 Standard on UE48-20S safety relay

Task

Connection of an M2000 Standard multi-beam photoelectric safety switch to UE48-20S.

Operating mode: with restart interlock and external device monitoring.

Function

When the light path is clear, the OSSD1 and OSSD2 outputs are live. The system is ready to switch on if K1 and K2 are de-energized. By pressing S1 (button is pressed and released), the UE48-20S is energized and its 13 - 14 and 23 - 24 contacts activate K1 and K2. On interruption of one of the light beams, the UE48-20S is de-energized by the OSSD1 and OSSD2 outputs and K1 and K2 are deactivated.

Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of one of the K1 or K2 contactors will be detected and does not result in the loss of the shutdown function. Jamming of the S1 button will prevent the UE48-20S from enabling.

Comments

¹⁾ Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

²⁾ The external device monitoring is only static.

³⁾ PELV as required in EN 60204-1 / 6.4

The related operating instructions for the integrated devices must be observed.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Number of beams (depending on type)	2 / 3 / 4
Beam separation (depending on type)	300 mm / 400 mm / 500 mm
Type	Type 2 (IEC 61496)
Safety integrity level	SIL2 (IEC 61508), SILCL2 (EN 62061)
Enclosure rating	IP 69K, IP 67, IP 66, IP 65

Product description

The IP69K housing, in conjunction with the M2000 multi-beam photoelectric safety switch, achieves an IP 69K enclosure rating. The materials used (V4A, PMMA, PA, PVC) have a high level of resistance against

common cleaning agents. A compensating element (membrane) prevents condensation on the plastic tubes and the entry of liquids. The cable is fed into the device through the proven PG connector.

Product description

With its high signal reserve, the M2000 RES/EDM multi-beam photoelectric safety switch is reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime. The modular concept cost-effectively achieves maximum machine safety by precisely coordinating

the characteristics of the device to the users' requirements. Interfaces and service concepts complete the product range to provide an ideal solution for the application.

The integrated restart interlock in the M2000 RES/EDM offers the advantages of shorter cable runs and quicker commissioning compared to traditional solutions.

M2000 RES/EDM on UE10-30S safety relay

Task

Interfacing an M2000 RES/EDM multi-beam photoelectric safety switch to UE10-30S.

Operating mode: with restart interlock and external device monitoring.

Function

The yellow LED on the receiver flashes when the light path is clear and the UE10-30S is de-energized and functioning correctly. The system is ready to be switched on. The system is enabled by pressing S1 (button is pressed and released). When the OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On the interruption of one of the light beams, the UE10-30S is deactivated by the OSSD1 and OSSD2 outputs.

Possible faults

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of the UE10-30S will be detected and will not result in the loss of the shutdown function. Jamming of the S1 button prevents output circuit to enable.

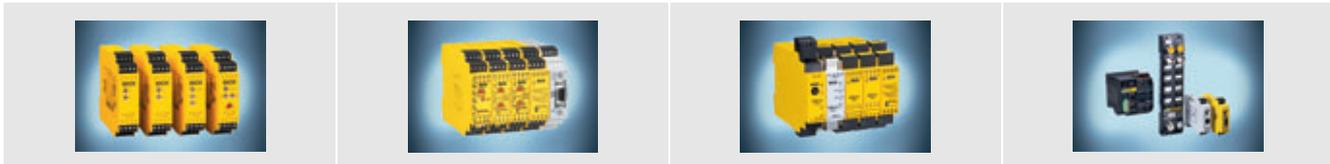

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV as required in EN 60204-1 / 6.4

The related operating instructions for the integrated devices must be observed.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

With its high signal reserve, the M2000 Cascadable multi-beam photoelectric safety switch is reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime. The modular concept cost-effectively achieves maximum machine safety by precisely coordinating

the characteristics of the device to the users' requirements. Interfaces and service concepts complete the product range to provide an ideal solution for the application.

With the cascadable variants, photoelectric safety switches can be flexibly adapted to the existing installation.

M2000 Cascadable on UE48-20S safety relay

Task

Interfacing two M2000 Cascadable multi-beam photoelectric safety switches to UE48-20S.
Operating mode: with restart interlock and external device monitoring.

Function

If the light path is clear, the OSSD1 and OSSD2 outputs are live. The system is ready to switch on if K1 and K2 are de-energized. By pressing S1 (button is pressed and released), the UE48-20S is energized and its 13 - 14 and 23 - 24 contacts activate K1 and K2. On interruption of one of the light beams, the UE48-20S is de-energized by the OSSD1 and OSSD2 outputs and K1 and K2 are deactivated.

Possible faults

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of one of the K1 or K2 contactors will be detected and does not result in the loss of the shutdown function. Jamming of the S1 button will prevent the UE48-20S from enabling.

Comments

- 1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.
- 2) The external device monitoring is only static.
- 3) PELV as required in EN 60204-1 / 6.4

The related operating instructions for the integrated devices must be observed.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

The M2000 A/P Standard multi-beam photoelectric safety switch comprises a sender/receiver unit on the active side (A) and one or more deflector mirrors on the passive side (P). With their high signal reserve, they are reliable under harsh industrial condi-

tions. Functions and status information integrated in the device allow rapid commissioning and prevent unnecessary machine downtime. Interfaces and service concepts complete the product range to provide an ideal solution for the application.

Product description

The M2000 A/P RES/EDM multi-beam photoelectric safety switch comprises a sender/receiver unit on the active side (A) and one or more deflector mirrors on the passive side (P). With their high signal reserve, they are reliable under harsh industrial conditions. Functions and status information integrated in the device allow rapid commissioning and prevent unne-

sary machine downtime. Interfaces and service concepts complete the product range to provide an ideal solution for the application. The integrated restart interlock in the M2000 A/P RES/EDM offers the advantages of shorter cable runs and quicker commissioning compared to traditional solutions.

Single-beam photoelectric safety switches

Electro-sensitive access protection of hazardous areas with type 2 and type 4 single-beam photoelectric safety switches

Door monitoring on a packaging machine

Monitoring robot presence at a loading station

SICK's single-beam photoelectric safety switches consist either of testable senders and receivers, or of testable senders and receivers combined with an evaluation unit. These devices have an impressive scanning range and are offered in a variety of shapes and sizes. They also offer maximum safety performance as they comply with type 2 or type 4 in accordance with EN 61496 and PL c or PL e in accordance with EN ISO 13849. With products from SICK, you can solve a wide range of applications - whether it is for robots, processing machines, machining centers, palletizing systems, high-bay warehouses or transfer lines. SICK offers customer-friendly, high-quality solutions.

Reduced inventory costs

Photoelectric safety switches can also be used for other automation applications. You only need to keep one type of through-beam photoelectric switch in stock and can thus reduce your costs.

Safe in extreme environments

All single-beam photoelectric safety switches from SICK have an IP 67 enclosure rating and are well-equipped to withstand extreme conditions, such as heat (up to +60 °C), cold (to -40 °C) or humidity. SICK also provides solutions for changing ambient conditions and for use outdoors.

Flexible technology that adapts as required

SICK photoelectric safety switches offer you more flexibility than ever before, such as a wide range of shapes, sizes and types and a choice of housing materials. Whether you need rectangular or cylindrical photoelectric switches, at SICK you will always find the right solution for your application.

Impressive performance, optimum price

You will also benefit from an optimum price-performance ratio. SICK products are ideally matched to one another.

Services for productive safety

With services tailored specifically to your needs, SICK offers complete support for the safety of your machine or system.

SICK addresses productivity and cost-effectiveness from the start: from selection and planning, through commissioning and inspection, to maintenance and modernization.

→ For information about the services, please refer to chapter B

Performance level	PL e (EN ISO 13849) ¹⁾

¹⁾ Only in conjunction with suitable testing device, e.g., Flexi Classic, DeviceNet Safety

Product description

The L41 single-beam photoelectric safety switch comprises a sender and a receiver. The function of the L41 can be checked with the aid of the test input on the sender. When connected to a suitable evaluation unit, such as Flexi Classic or DeviceNet Safety products, the L41 can achieve performance levels up to PL e in accordance with EN ISO 13849-1.

Color LEDs provide current information about operational status. The variety of device scanning ranges, suitability for outdoor applications, and the use of deflector mirrors enable more complex protection tasks.

3 x L41 (cascaded) on Flexi Classic main unit and extension unit

Task

Integration of three cascaded L4000 (L41) family single-beam photoelectric safety switches with a UE410-MU/XU safety controller into a relay controller/contact controller.
Operating mode: with restart interlock and with external device monitoring.

Function

When the input conditions are valid, the system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The related output on the UE410-MU/XU carries power. If the input conditions are no longer met, the related outputs on the UE410-MU/XU shut down.

Possible faults

The incorrect function of the K1 and K2 contactors will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

Comments

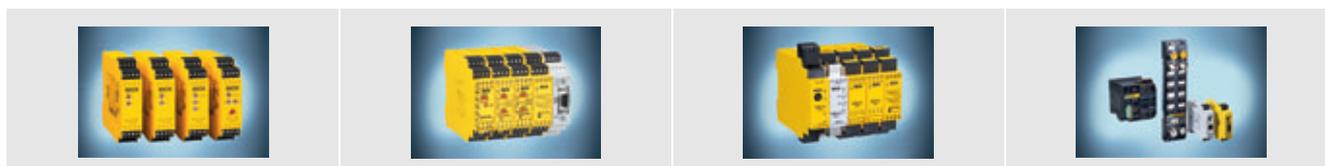

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV as required in EN 60204-1 / 6.4

Optical short-circuits must be avoided. Take note of the operating instructions for the integrated devices. The safety-related parameters (safety integrity level and response time) are dependent on the types used.

H

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

¹⁾ Only in conjunction with UE401

Product description

The L4000 photoelectric safety switch system comprises the UE401 safety evaluation unit, to which up to four L4000/L400 sensors (sender/receiver combinations) can be connected as single pairs or up to 8 sensors can be connected in cascade. The UE401 safety evaluation device is the link between sensors and machine controller.

Color LEDs provide current information about operational status. The indication of status and error messages on the 7-segment display of the UE401 safety evaluation unit allows rapid diagnostics. The ability to connect sensors or sensor pairs, the range of versions, and deflector mirrors make the L4000 system ideal for complex protection applications – even outdoors.

5 x L4000 (two pairs cascaded) on UE401 with UE10-30S

Task

Integrate five single-beam L400/L4000 photoelectric safety switches (2 pairs cascaded) with a UE401 safety evaluation device and a UE10-30S safety relay. Operating mode: with restart interlock and external device monitoring.

Function

When the light path is clear and the UE10 is de-energized and functioning correctly, the yellow LED on the UE401 flashes. The system is ready to be switched on. The system is ready to be switched and is enabled when the S1 button is pressed and released. OSSD1 and OSSD2 outputs are then live and the UE10 is switched on. If one of the light beams is interrupted, the UE10 is deactivated as the OSSD1 and OSSD2 output signals drop out.

Possible faults

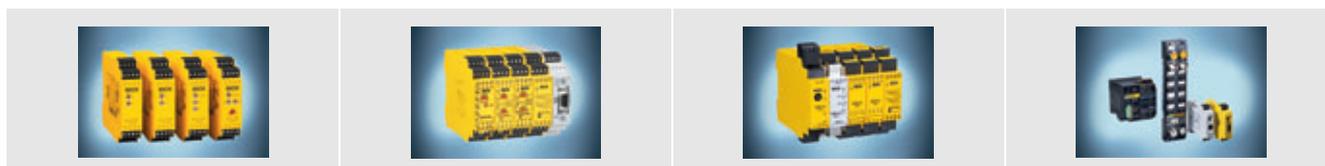

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The incorrect functioning of the UE10 will be detected and will not result in the loss of the shutdown function. Jamming of the S1 button prevents output circuit to enable.

Comments

¹⁾ PELV as required in EN 60204-1 / 6.4

The related operating instructions for the integrated devices must be observed!

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Product description

The WSU/WEU26-3 photoelectric safety switch is used for access protection of hazardous areas on machines or in plants. The devices are permanently mounted in the access area at the necessary safety dis-

tance from the nearest hazardous point and send a shutdown signal to the machine or system when the light beam is interrupted.

Product description

The L21 single-beam photoelectric safety switch comprises a sender and a receiver. The function of the L21 can be checked with the aid of the test input on the sender. When connected to a suitable evaluation unit, such as the Flexi Classic and DeviceNet Safety products, the L21 can achieve performance levels up to PL c in accordance with EN ISO 13849-1.

Color LEDs provide current information about operational status. The variety of device scanning ranges, suitability for outdoor applications, and the use of deflector mirrors enable more complex protection tasks.

3 x L21 (cascaded) with Flexi Classic main unit and extension unit on UE10-30S

H

Task

Integration of three cascaded L2000 (L21) family single-beam photoelectric safety switches with a UE410-MU/XU safety controller and a UE10-30S safety relay.

Operating mode: with restart interlock and external device monitoring.

Function

The system is ready when the light path is clear and the UE10-30S is de-energized and functioning correctly. When the S1 button is pressed and released, the Q1 and Q2 outputs on the UE410-MU/XU are live and the UE10-30S is switched on. If one of the light beams is interrupted, the Q1 and Q2 outputs on the UE410-MU/XU shut down the UE10-30S.

Possible faults

Malfunctions in the UE10-30S will be detected. The shutdown function is retained.

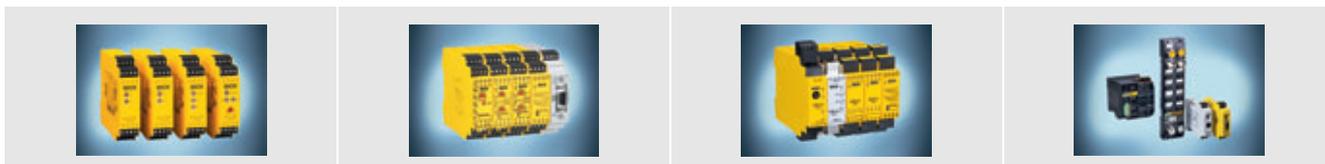

Comments

1) Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, the integration must be dual-channel (x/y paths). Single-channel integration in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

2) PELV as required in EN 60204-1 / 6.4

Take note of the operating instructions for the integrated devices. The safety-related parameters (safety integrity level and response time) are dependent on the types used.

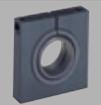

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

3 x L27 with a Flexi Classic UE410-8DI input expansion unit

4103L27_/R01

Task

Integration of three L2000 (L27) family single-beam photoelectric safety switches in a UE410-8DI input expansion unit.

Function

The sensors switch when the light beam is clear. When sensor 1 and sensor 2 switch, the input condition for input A is met.

When sensor 3 has switched, the input condition for input B is met. If a light beam is interrupted, the related input condition (input A or input B) shuts down the UE410-8DI.

Possible faults

A UE410-8DI has two test pulse generators. This means that short-circuits between odd (X1) and evenly (X2) numbered outputs will be detected. Short-circuits between two odd (i.e., X1 and X3) or two evenly (i.e., X2 and X4) numbered outputs will not be detected. In this case, short-circuits between X1 and X4 and X1 and X6 are detected, but short-circuits between X4 and X6 are not detected.

Comments

Take note of the operating instructions for the integrated devices.

The safety-related parameters (safety integrity level and response time) are dependent on the types used.

sens:Control – safe control solutions

Optimal integration of all safety components leads to a complete solution with sens:Control – safe control solutions: Safety relays (from page N-0), safety controllers (from page O-0) and network solutions (from page P-0).

Type	Type 2 (EN 61496) ¹⁾
Performance level	PL c (EN ISO 13849) ¹⁾

¹⁾ Only in conjunction with suitable testing device, e.g., Flexi Classic, DeviceNet Safety

Product description

The L28 single-beam photoelectric safety switch comprises a sender and a receiver. The function of the L28 can be checked with the aid of the test input on the sender. When connected to a suitable evaluation unit, such as Flexi Classic and DeviceNet Safety products, the L28 can achieve performance levels up to PL c in accordance with EN ISO 13849-1.

Color LEDs provide current information about operational status. The variety of device scanning ranges, suitability for outdoor applications, and the use of deflector mirrors enable more complex protection tasks.

¹⁾ Reduction of the scanning range

Mirror columns and device columns

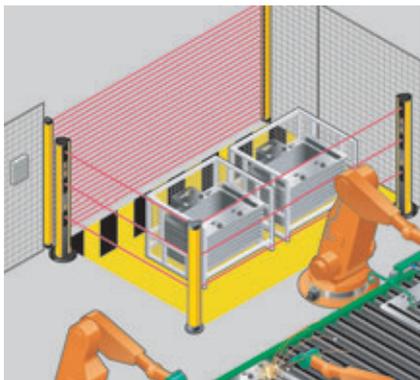

Applications

Mirror and device columns are used where there are problems mounting opto-electronic protective devices.

On machining centers or material gates, the opto-electronic protective devices must be positioned in an open room.

Typical applications are:

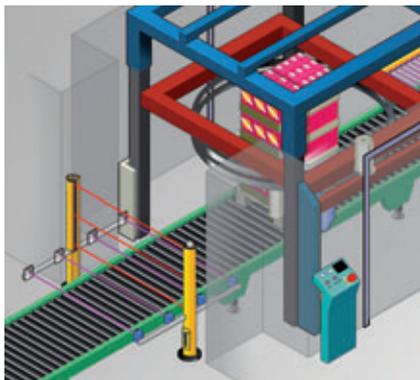

- Palletizer/depalletizer
- Storage and conveyor
- Packaging industry
- Automotive industry
- Machine tool industry
- Handling machines
- Entry/Exit systems
- Robot stations
- Muting stations

Mirror columns

When combined with multiple light beam safety devices or safety light curtains, mirror columns offer important advantages:

- Since there are only two active sides, the cabling effort is considerably reduced.
- The unhindered access eases loading and makes it easy to change tools and programs.

Device columns with external grooves

The robust device columns can be used universally:

- To position multiple light beam safety devices or safety light curtains in an open room
- The two external mounting grooves, in combination with the muting arms, brackets and protective plates, provide perfect conditions for the installation of muting stations.

Device columns for outdoor use

They are used to mount multiple light beam safety devices in outdoor applications that reach temperatures as low as -15°C .

Due to its heating feature, the front screen does not mist up and the multiple light beam safety device remains at operating temperature.

Mounting and operation of muting stations made easy

Using mirror columns and device columns from SICK offers unbeatable advantages – from ordering to inventory.

Small number of components

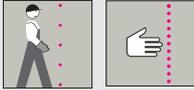

- Easy mounting
- Active/passive variants
- Pre-mounted kits for
 - crossed muting (2 sensors) and
 - parallel muting (4 sensors)

Versatility

- High flexibility in x, y, z directions
- Optional muting sensor protection

Vertical deflection	M40Z-0250##### M20Z-02#####	2	500	PM2Z96-30240020	1027265

¹⁾ Warning: reduction of the scanning range!

The scanning range is reduced per mirror deflection (n) in accordance with the following formula:

$$\text{Scanning range (with mirror deflection)} = \text{scanning range (of the light beam safety device without mirror deflection)} \times \sqrt{0.8^n}$$

Example: M2000 with a scanning range of 25 m is deflected three times. The scanning range is now $25 \text{ m} \times \sqrt{0.8^3} = 17.8 \text{ m}$

Protective field heights (depending on type)	150 mm ... 1800 mm
Column heights (depending on type)	985 mm ... 2420 mm
Design	With 2 external mounting grooves

Product description

Device columns are used where there are problems mounting opto-electronic protective devices.

On machining centers or material gates, the opto-electronic protective devices must be positioned in an open room. An Entry/Exit system is often used at the gates for automatic material transport. The device columns with the two external mounting grooves, in combination with the muting

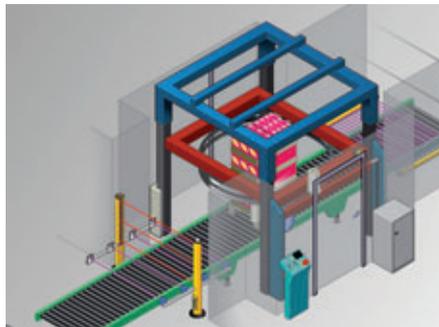

arms, brackets and protective plates, ensure straightforward, flexible attachment of the muting sensors. Pre-assembled kits significantly reduce the number of items that need to be ordered and the on-site assembly time.

Appropriate accessories such as an adjusting plate and steel fixing bolts make it easier to quickly mount and align the device columns on the floor.

Technical data overview

Suitable for	M4000 M2000
Number of beams (depending on type)	2, 3
Column height	1223 mm
Design	With front screen heating for outdoor use (down to -15 °C)

Product description

The heatable device columns are used to mount the M4000 and M2000 multiple light beam safety devices in outdoor applications that reach temperatures down to -15 °C.

Sender and receiver are mounted in the columns. Due to its heating feature, the front screen does not mist up and the mul-

multiple light beam safety device remains at operating temperature. The components are conditionally corrosion-resistant to ambient effects such as saltwater.

Appropriate accessories such as an adjusting plate and steel fixing bolts make it easier to quickly mount and align the device columns on the floor.

Applications

→ For more applications, please refer to the application finder at www.sick.com

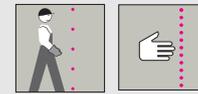

- Outdoor application
- Stone production
- Automotive industry
- Wood industry

Wood industry: Access protection on a sawmill

Port: Access protection on a container bridge

Product may differ from illustration

- Outdoor applications down to -15 °C
- Easy mounting
- Device protection
- Applicable for multiple light beam safety devices

Electro-mechanical safety switches

Safely equipped for all cases

For the protection of your machine or system, SICK offers you a variety of safety switches: From safety position switches in corrosion-resistant metal housing to safety locking devices in compact plastic housing.

The appropriate safe control solution is also available from SICK.

Safety position switches and safety hinge switches

- Position switches ensure safe position monitoring even for very fast movements or where exact positions must be determined.
- Safety hinge switches check that pivotal protective devices are closed.

Safety switches with separate actuator

- Sliding and rotating doors as well as removable protective covers are protected with safety switches with separate actuator.
- SICK offers various designs for different demands: from compact to standard.

Safety locking devices

- Safety locking devices are used whenever the immediate opening of doors is not allowed; either because delayed stopping poses a danger to persons or because an uncontrolled intervention into a process could lead to grave consequences.
- The locked state is indicated via an LED or detected by the signalling contact.

- Safety switches with remote multi-coded actuator
- 3 contacts
- Miniature design – ideal for direct mounting on framework

In-system added value

Safety relays

Safety relays allow simple integration of safety components into machinery or plant.

Safety controllers

Safety controllers are used when the safety function (e.g., switching off a dangerous movement) needs to be implemented by a logical combination of safety relevant signals. Using a safety controller provides more flexibility for machine operation and ensures that future needs can be met.

Network solutions

Network solutions are used in larger scale applications in plants and on machines. This saves cabling and enables modular design of the safety automation. Potential errors or faults can be easily localized and quickly trouble-shot thanks to comprehensive diagnostic functions, which significantly reduce machine downtime. SICK offers solutions for a range of communication platforms: AS-i Safety at Work, Device-Net Safety, PROFIBUS/PROFINET, Ether-Net/IP, and Modbus TCP.

Alignment guide

Figure	Type	Part no.
	iE10-G1	5318460

iE10-G1

Dimensions in mm

The metal alignment guide provides the actuator with a wider entry area into the safety switch. With the alignment guide, the safety switch is better protected against damage.

It can be secured to the safety switch with the two M3 x 34 self-tapping screws (screws supplied with delivery).

It can only be used in combination with actuators with overtravel (iE10-A4, iE10-S4).

It can not be used with special locking devices (i10-E0313S02), which already have a longer top entry overtravel.

AS-Interface accessories

Description	Type	Part no.
AS-i Clip	ASI-M12	6022472

- Die-cast zinc housing
- Five actuating directions
- Cable gland M20
- Enclosure rating IP 67
- Design according to EN 50041

K

Technical data overview

Number of positive action N/C contacts (depending on type)	2 / 3
Number of N/O contacts (depending on type)	1 / 2
Type of actuator	Separate actuator
Housing material	Metal
Number of cable entries	1
Size of the cable gland	M20
Locking force	12 N

Product description

- Safety switches with remote multi-coded actuator
- 4 contacts
- Small door radius (175 mm) possible even with standard actuator

In-system added value

Safety relays

Safety relays allow simple integration of safety components into machinery or plant.

Safety controllers

Safety controllers are used when the safety function (e.g., switching off a dangerous movement) needs to be implemented by a logical combination of safety relevant signals. Using a safety controller provides more flexibility for machine operation and ensures that future needs can be met.

Network solutions

Network solutions are used in larger scale applications in plants and on machines. This saves cabling and enables modular design of the safety automation. Potential errors or faults can be easily localized and quickly trouble-shot thanks to comprehensive diagnostic functions, which significantly reduce machine downtime. SICK offers solutions for a range of communication platforms: AS-i Safety at Work, Device-Net Safety, PROFIBUS/PROFINET, Ether-Net/IP, and Modbus TCP.

Product description

- Safety switches with remote multi-coded actuator and tumbler mechanism
- 2 contacts for remote locking and door monitoring functions
- Straight, flexible or bolt actuator available

In-system added value

Safety relays

Safety relays allow simple integration of safety components into machinery or plant.

Safety controllers

Safety controllers are used when the safety function (e.g., switching off a dangerous movement) needs to be implemented by a logical combination of safety relevant signals. Using a safety controller provides more flexibility for machine operation and ensures that future needs can be met.

Network solutions

Network solutions are used in larger scale applications in plants and on machines. This saves cabling and enables modular design of the safety automation. Potential errors or faults can be easily localized and quickly trouble-shot thanks to comprehensive diagnostic functions, which significantly reduce machine downtime. SICK offers solutions for a range of communication platforms: AS-i Safety at Work, Device-Net Safety, PROFIBUS/PROFINET, Ether-Net/IP, and Modbus TCP.

Number of N/O contacts	1
Type of shaft	Hollow shaft
Length of the shaft	36.5 mm
Housing material	Metal
Enclosure rating	IP 66

Product description

- Safety hinge switch for direct installation of gate and door hinges
- Hollow shaft design
- 3 contacts

In-system added value

Safety relays

Safety relays allow simple integration of safety components into machinery or plant.

Safety controllers

Safety controllers are used when the safety function (e.g., switching off a dangerous movement) needs to be implemented by a logical combination of safety relevant signals. Using a safety controller provides more flexibility for machine operation and ensures that future needs can be met.

Network solutions

Network solutions are used in larger scale applications in plants and on machines. This saves cabling and enables modular design of the safety automation. Potential errors or faults can be easily localized and quickly trouble-shot thanks to comprehensive diagnostic functions, which significantly reduce machine downtime. SICK offers solutions for a range of communication platforms: AS-i Safety at Work, Device-Net Safety, PROFIBUS/PROFINET, Ether-Net/IP, and Modbus TCP.

Non-contact safety switches

Technical overview and applications

Non-contact safety switches are used wherever movable guards, no wear and tear, vibration resistance and strict hygiene provisions are required.

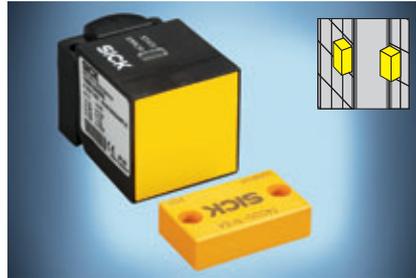

SICK offers non-contact safety switches with three different operating principles: magnetic, transponder and inductive.

In addition, different designs are available for each sensor: cuboid or cylindrical. As a result, the optimal safety switch for the application can be selected.

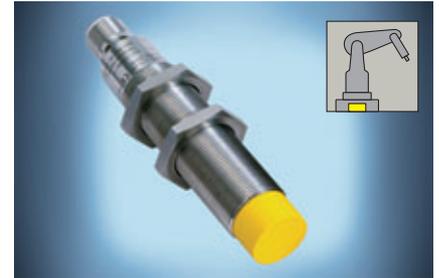

Magnetic safety switches

- The use of magnetic safety switches is an advantage in areas with high contamination or strict hygiene regulations.
- In applications where precise guiding of the protective device is difficult, magnetic safety switches from SICK are the right choice.
- When combined with a safe evaluation unit from SICK, applications up to performance level e can be solved.

Transponder safety switches

- Transponder safety switches are used in applications which require a protection against tampering.
- The saved actuator code is the same as the safety switch code, ensuring protection against tampering.
- Transponder safety switches also have a high response range. This offers advantages during installation and increases the availability during the machine's life.
- Variants allow users to connect up to 20 safety switches in a series.

Inductive safety switches

- Inductive safety switches are used for non-contact and wear-free position detection.
- They do not require a special counter part, but detect metal such as VA or ST37.
- In comparison with electro-mechanical position switches, inductive safety switches have a wide response range and are therefore not affected by mounting tolerances, which simplifies installation and adjustment.

Applications:

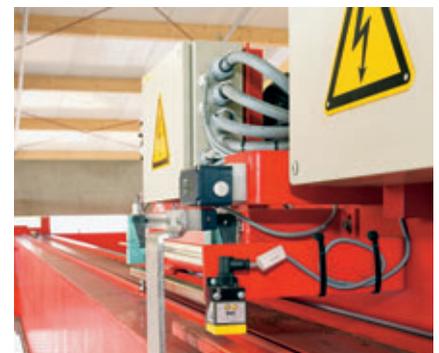

In areas with high contamination or where strict hygiene regulations apply

Applications:

Ideal, if protection against tampering is necessary, vibrations occur or high tolerances are required

Applications:

The switches are maintenance-free, making them ideal for the protection or position monitoring of points which are not easily accessible

Product description

The T4000 Standard non-contact safety switch system comprises of the following components:

- 1 sensor
- 1 coded actuator (unique copy)
- 1 evaluation unit

The evaluation unit is further equipped with:

- 1 solid-state application diagnostic output
- 2 LED status displays

The ATEX version of the T4000 Standard non-contact safety switch is approved for use in Ex zone 2.

Product description

The T4000 Direct non-contact safety switch is a transponder safety switch with integrated evaluation unit that is activated by a coded actuator. The release of the safety guard only happens if a valid actuator is within the response range of the T4000 Direct. Two actuation principles are available:

- Multicode: any valid actuator located within the response range of the T4000 Direct
 - Unicode: the code of the actuator in the response range must match the taught code of the T4000 Direct safety switch
- With the two safety outputs (OSSD) of the safety switch, it is possible to directly connect the safety switch to safety evaluation electronics such as a safety programmable logic controller.

Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)
Type of output	Semiconductor, pulsed
Number of safe outputs	1

Product description

The IN4000 Standard non-contact safety switch is an inductive sensor that is activated by metal (e.g., steel ST37). It does not, therefore, require a separate coded actuator.

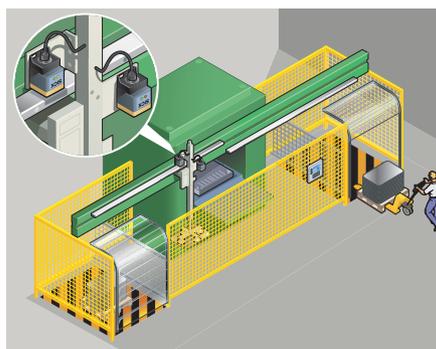

Due to the non-contact form of operation, this sensor has advantages in that it is

straightforward to adjust and install. It also has increased resistance to shock and vibration.

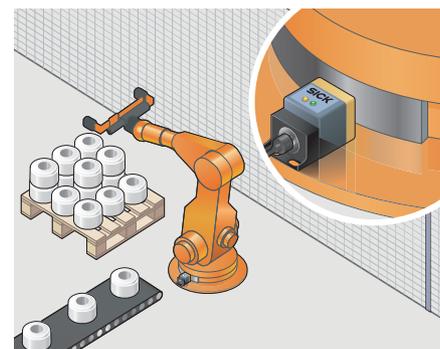

The response range of the sensor is monitored spatially and over time. In this way, increased protection against tampering is provided.

Applications

→ You can find more applications using the application finder at www.mysick.com

Safe position monitoring on a gantry robot

T-junction

Figure	Description	Type	Part no.
	T-junction for serial connection of IN4000 sensors	IN40-A2121N	5315025

- No actuator necessary
- Inductive safety switch with LED status display
- Inductive safety switch with integrated evaluation unit
- Two safety outputs for direct connection of safety switch to safe control

Technical data overview

Sensor principle	Inductive
Safety integrity level	SIL3 (IEC 61508) SILCL3 (EN 62061)
Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)
Type of output	Semiconductor (OSSD)
Number of safe outputs	2

Product description

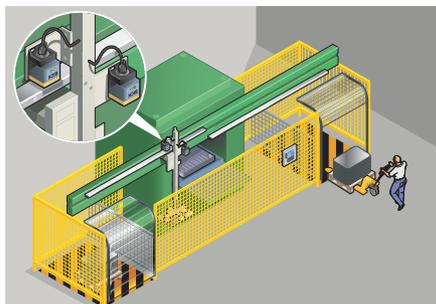

The IN4000 non-contact safety switch Direct is an inductive safety switch with integrated evaluation unit that is activated by metal (e.g., steel ST37). Therefore, it does not require a separate coded actuator. Due to the non-contact form of operation, this sensor has advantages in that it is straightforward to adjust and install. It also has increased resistance to shock and

vibration. The response range of the sensor is monitored spatially and over time. In this way, increased protection against tampering is provided.

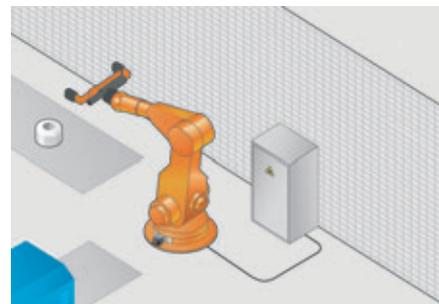

With the two safety outputs (OSSD) of the safety switch, it is possible to directly connect the safety switch to safety evaluation electronics such as a safety programmable logic controller.

Applications

Safety command devices

Components for effective safety solutions

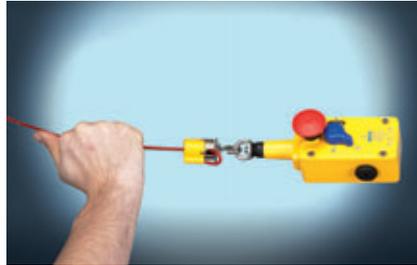

With SICK safety command devices, dangerous movements can be stopped and controlled safely.

- For emergency stop functions, either the ES21 emergency stop pushbuttons or the i110RP or i150RP rope pull switches are used.
- ES21 emergency stop pushbuttons and i110RP and i150RP rope pull switches comply with the relevant standards EN ISO 13850 and 60947-5-5 for emergency stop. They must lock upon actuation and have to be unlocked manually afterwards.

Emergency stop pushbuttons

- Emergency stop pushbuttons can either be integrated in a machine control panel or directly on a machine using a surface mount version.

Rope pull switches

- Rope pull switches are usually applied on machines that are not protected by safety covers, e.g., conveyors.

Enabling switches

- Enabling switches are needed to initiate movements. They are only used in setup mode and protect the person in the hazardous area as the protective devices are usually not activated in this situation.

Safety application	Model	Number of positive action N/C contacts / N/O contacts	Housing material	Connection type ¹⁾	Cable length/ maximum rope length	Enclosure rating	Product	Page

¹⁾ For emergency stop pushbuttons: connection type housing

- Emergency stop pushbutton in accordance with EN ISO 13850 and EN 60947-5-5
- Visible indication of switching position
- With panel type mounting, safe contacts monitor the correct assembly of the pushbutton with the contact block
- Optional LED illumination or protective collar versions

Technical data overview

Number of positive action N/C contacts (depending on type)	1 / 2 / 3
Number of N/O contacts (depending on type)	0 / 1
Housing material	Plastic
Enclosure rating (depending on type)	IP 54 / IP 65
Connection type (contacts)	Screw connection
Mounting diameter	22 mm

Product description

Emergency stop pushbuttons are a must for automated machines and plants. In an emergency, anyone pressing the button immediately puts a machine or plant in a safe state by stopping the hazardous movement.

- Versions for panel and surface mounting
- Release either by turning or by key
- Various switching elements with N/C and N/O combinations

In-system added value

Safety relays

Safety relays allow simple integration of safety components into machinery or plant.

Safety controllers

Safety controllers are used when the safety function (e.g., switching off a dangerous movement) needs to be implemented by a logical combination of safety relevant signals. Using a safety controller provides more flexibility for machine operation and ensures that future needs can be met.

Network solutions

Network solutions are used in larger scale applications in plants and on machines. This saves cabling and enables modular design of the safety automation. Potential errors or faults can be easily localized and quickly trouble-shot thanks to comprehensive diagnostic functions, which significantly reduce machine downtime. SICK offers solutions for a range of communication platforms: AS-i Safety at Work, Device-Net Safety, PROFIBUS/PROFINET, Ether-Net/IP, and Modbus TCP.

Internal circuitry

Function

The connected emergency stop pushbuttons or safety switches are controlled by the supply voltage. After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain in the open state. If the con-

nected sensor is not activated (i.e., the input circuits are closed), then the normally open contacts close immediately in automatic reset (LED "K1, K2" illuminates). In the case of manual reset, this only occurs after pressing the reset button.

External device monitoring (EDM)

The unit can take over the function of external device monitoring. The contactor monitoring system monitors the external relays through their normally closed contacts.

Manual reset

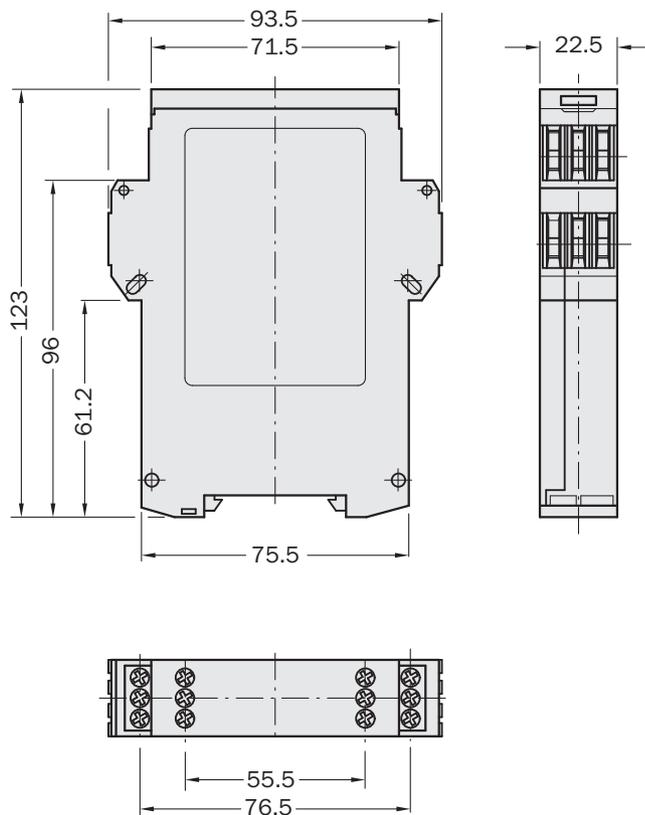

For manual resetting, a pushbutton must be connected to terminals Y1 and Y3. This reset is monitored.

Automatic reset

For automatic resetting, Y1 - Y2 must be linked.

Internal circuitry

Function

The connected emergency stop pushbuttons or safety switches are controlled by the supply voltage. After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain in the open state. If the con-

nected sensor is not activated (i.e., the input circuits are closed), then the normally open contacts close immediately in automatic reset (LED "K1, K2" illuminates). In the case of manual reset, this only occurs after pressing the reset button.

External device monitoring (EDM)

The unit can take over the function of external device monitoring. The contactor monitoring system monitors the external relays through their normally closed contacts.

Manual reset

For manual resetting, a pushbutton must be connected to terminals Y1 and Y3. This reset is monitored.

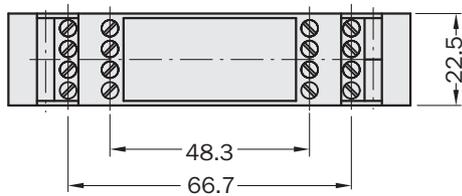

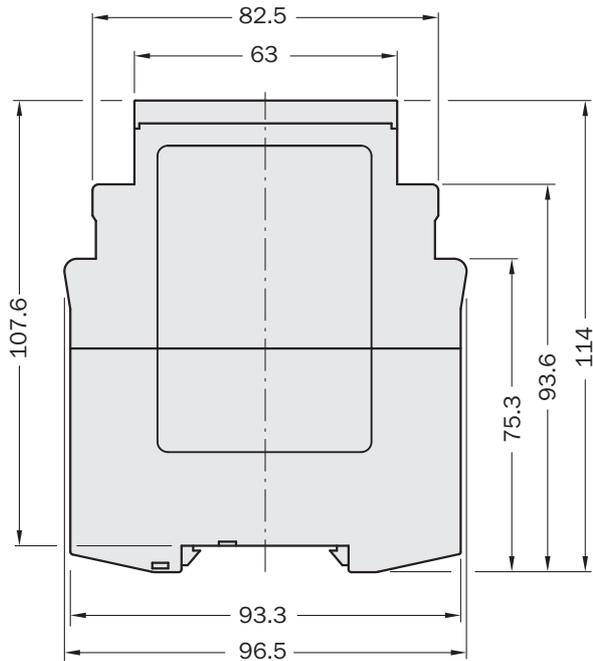

Automatic reset

For automatic resetting, Y1 - Y2 must be linked.

Weight	0.2 kg	

Internal circuitry

Function

The UE42-2HD unit corresponds to EN 574 Type III C. To release the outputs, the two inputs (e.g., two-hand pushbuttons) must be actuated within 0.5 sec.

After applying the supply voltage to terminals A1 - A2, the LED SUPPLY illuminates to indicate that electrical power is present. Pressing the two-hand pushbuttons S1 and S2 at the same time

(see connection diagrams) closes the two normally open contacts. Releasing one of the buttons will cause the circuits to open.

A renewed attempt to initiate starting is only possible if both start buttons are set to their nominal start position (for two-hand pushbuttons units: if both have been released) and the normally closed contact is closed.

External device monitoring (EDM)

The UE42-2HD can take over the function of external device monitoring. The normally closed contacts of the external relays are switched in series and connected to terminals Y1 - Y2.

Automatic start

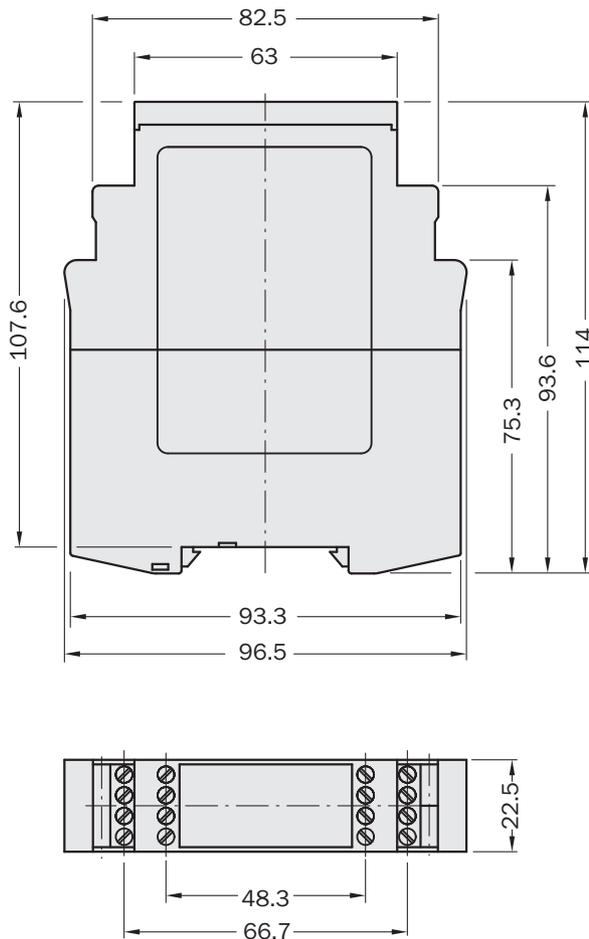

The UE42-2HD has an automatic start facility.

Monitoring of simultaneous activation

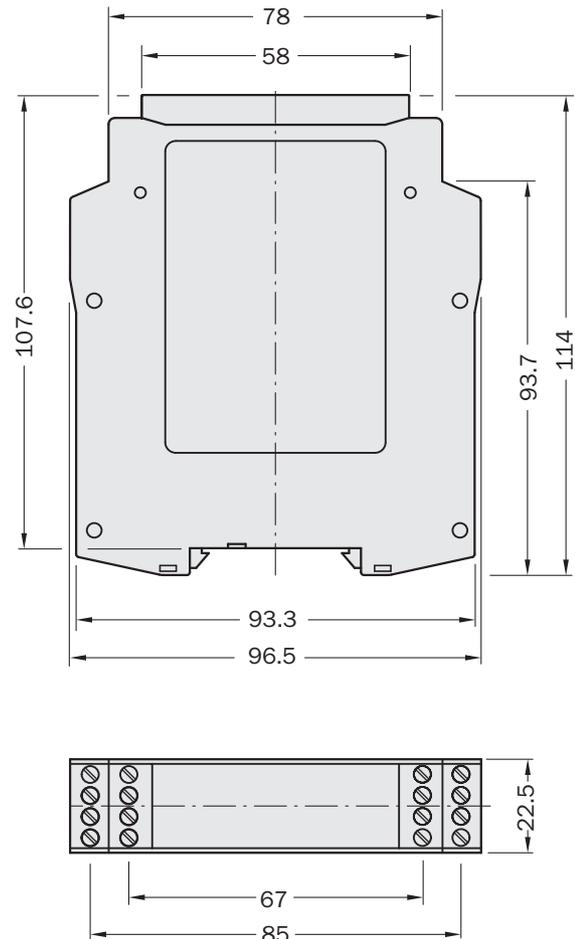

The pressing of the start buttons at the same time is monitored. Only when both start buttons are activated within 0.5 sec do normally open contacts close and the normally closed contact opens.

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain in the opened state. If the connected sensor is not activated (i.e., the input circuits are closed), then the normally open contacts close immediately in automatic

reset (LED K1 and K2 illuminate). In the case of manual reset, this only occurs after pressing and releasing the reset button. Activation of the sensor (opening of one or both input circuits) affects the opening of the normally open outputs (LED K1 and K2 off).

External device monitoring (EDM)

The UE43-2MF unit can take over the function of external device monitoring. The contactor monitoring system monitors the external relays by means of their normally closed contacts.

Manual reset

For manual resetting, a pushbutton must be connected to terminals S33 - S34. Reset is monitored.

Automatic reset

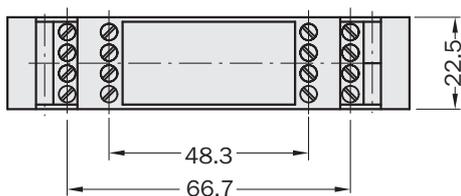

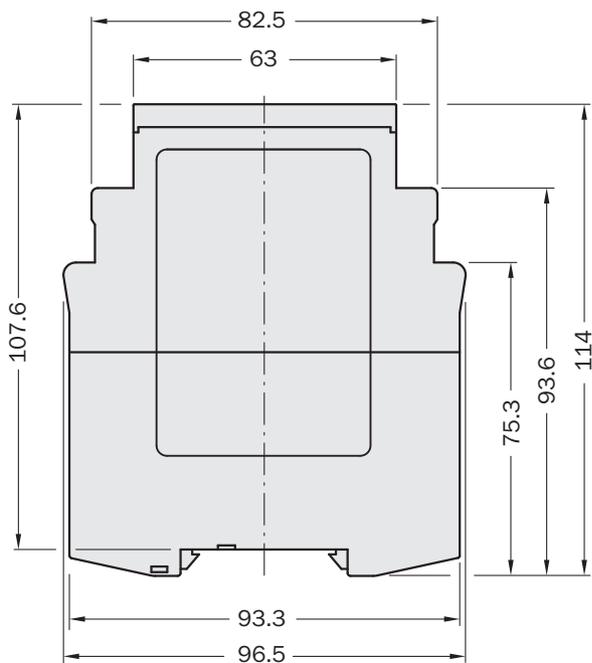

For automatic resetting, S12 - S35 must be linked.

Cross-circuit detection

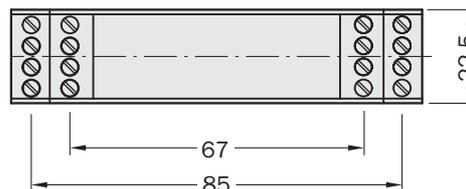

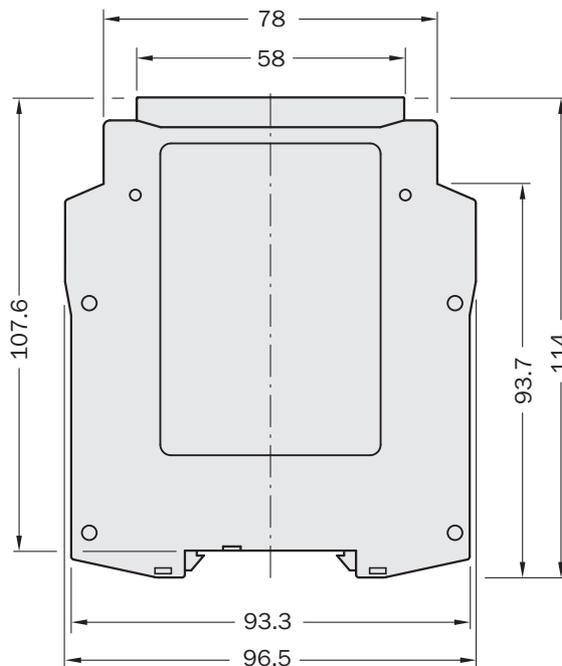

Cross-circuit is detected on dual-channel wired systems if these are wired with opposing polarity.

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain open. If the connected sensor is not activated (i.e., the input circuits are closed), the normally open contacts close immediately in automatic reset (LED K2 and K3 illuminate). In the case of manual resetting, this only occurs upon pressing and releasing the reset button. Activation of the sensor (opening of one or both input circuits) affects the opening of the normally open contacts (LED K2 and K3 off).

External device monitoring (EDM)

The UE43-3MF unit can take over the external device monitoring. The contactor monitoring system monitors the external relays by way of their normally closed contacts.

Manual reset

For manual resetting, a pushbutton must be connected to terminals Y12 and Y13. Reset is monitored.

Automatic reset

For automatic resetting, Y12 - Y14 must be linked.

Cross-circuit detection

Cross-circuit is detected on dual-channel wired systems, if these are wired with opposing polarity.

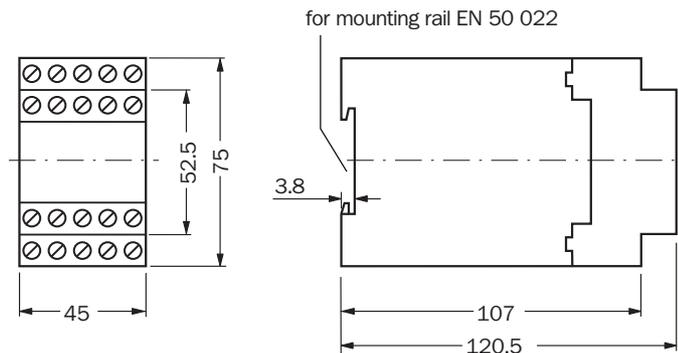

Monitoring of synchronization

Only if input 2 closes no later than 0.5 sec after input 1, do the output circuits close. If input 2 closes before input 1, the synchronization monitoring will not be affected, and the output circuits will close. This monitoring only takes place in automatic reset.

Weight	0.21 kg	

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain open. If the connected sensor is not activated or the protective field of the connected electro-sensitive protective equipment (ESPE) is not broken (i.e., the input circuits are closed), then the normally open contacts close

immediately in automatic reset (LED K1 and K2 illuminate). The activation of the sensor or incursion into the protective field of the non-contact safety device (open state of one of the two input circuits) affects the opening of the normally open contacts (LED K1 and K2 off).

External device monitoring (EDM)

The UE43-4AR unit can take over external device monitoring. The contactor monitoring system monitors the external relays by way of their normally closed contacts. Connecting the EDM contacts between S11 and S34 replaces the wire link.

Automatic reset

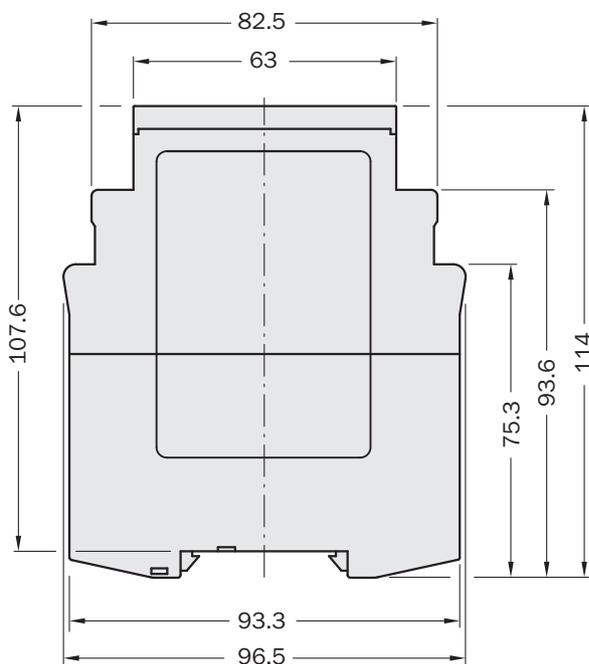

S11 - S34 must be linked.

Cross-circuit detection

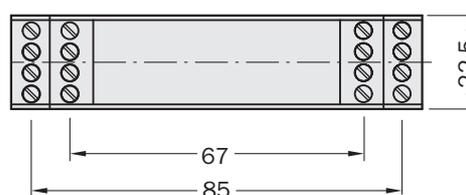

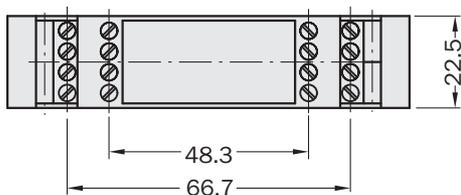

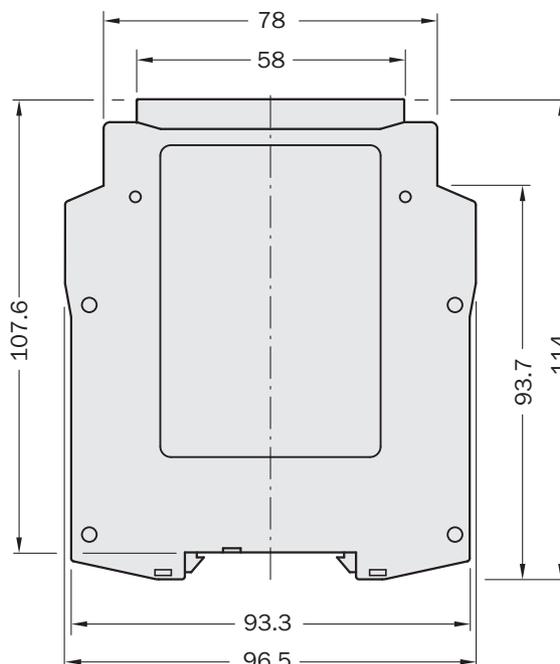

Cross-circuit is detected on dual-channel wired systems, if these are wired with opposing polarity.

Product description

- Cross-circuit detection on dual-channel wired systems
- Outputs:
 - 2 normally open contacts
 - 1 normally open contact with on-delay, adjustable from 0.15 ... 3 sec or 1.5 ... 30 sec
- 3 LEDs:
 - Supply voltage
 - Relays K1/K2 (without delay) and relays K3/K4 (off-delayed)
- Manual reset
- Automatic reset
- Additional outputs available with the contact expansion modules
 - UE10-4XT
 - UE11-4DX
- External device monitoring (EDM)
- Screw-type terminals or plug-in terminals

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts (13 - 14 / 23 - 24) remain open. After completion of the on-delay set on the relay, the delay circuit (37 - 38) closes, and the LED K3/K4 illuminates. If the connected sensor is not activated (i.e., the input circuits are closed), the normally open contacts (13 - 14 / 23 - 24) close immediately during automatic reset, the LED K1/K2 illuminates, and the delay circuit (37 - 38) opens (LED K3/K4 off). In the case of manual reset, this only occurs after pressing and releasing the reset button.

The activation of the sensor (opening of one or both input circuits) affects the opening of both normally open contacts (13 - 14 / 23 - 24), with LEDs K1/K2 being off, and a time delayed

closing of the third circuit (37 - 38), with LED K3/K4 illuminating.

External device monitoring (EDM)

The unit can take over external device monitoring. The contactor monitoring system monitors the external relays by way of their normally closed contacts.

Manual reset

For manual resetting, a pushbutton is to be connected between 24 V DC supply and terminal S34. This reset is monitored. For applications with mechanical locking safety switches, only channel 2 must be closed during manual reset.

Automatic reset

For automatic resetting, S12 - S35 must be linked. For applications with mechanical locking safety switches, only channel 1 must be closed during automatic reset.

Cross-circuit detection

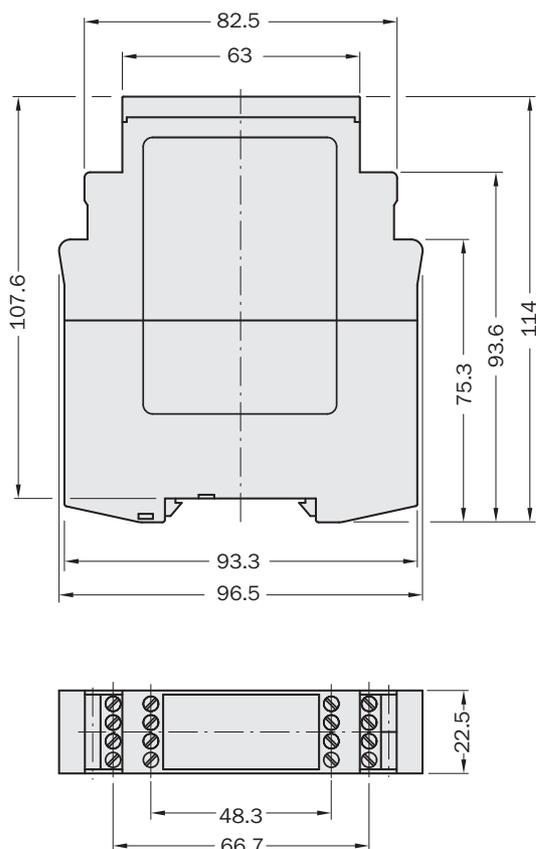

Cross-circuit is detected on dual-channel wired systems, if these are wired with opposing polarity.

Monitoring of synchronization

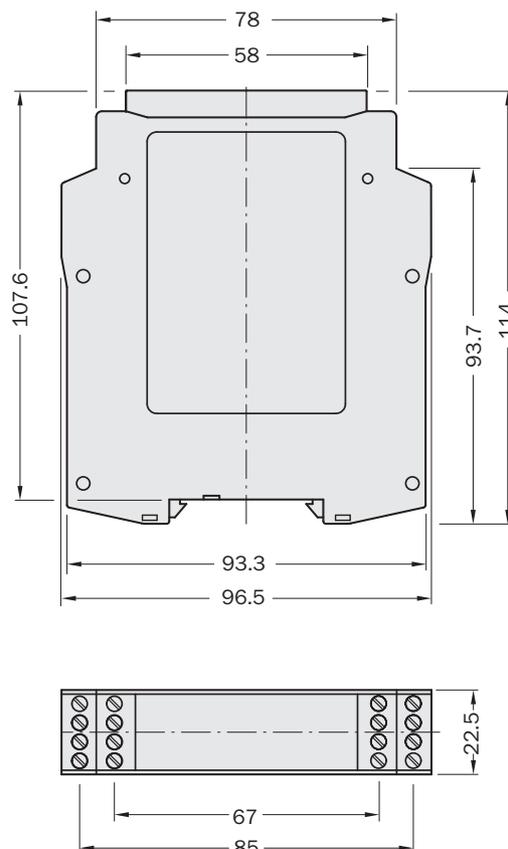

Only if input 2 closes no later than 0.5 sec after input 1, do the output circuits close. If input 2 closes before input 1, the synchronization monitoring will not be affected, and the output circuits will close. This monitoring only takes place in automatic reset.

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain open. If the connected sensor is not activated (i.e., the input circuits are closed), the normally open contacts close immediately during automatic resetting; LED K1/K2 and K3/K4 illuminate. In the case of manual resetting, this only occurs after pressing and releasing the reset button. The activation of the sensor (opening of one or both input circuits) affects the opening of both normally open contacts (13 - 14 / 23 - 24) immediately, and a time delayed opening of the

third circuit (37 - 38), with LED K1/K2 immediately going off and K3/K4 going off later.

External device monitoring (EDM)

The unit can take over external device monitoring. The contactor monitoring system monitors the external relays by way of their normally closed contacts.

Manual reset

For manual resetting, a pushbutton must be connected to terminals S33 - S34. This reset is monitored.

Automatic reset

For automatic resetting, S33 - S35 must be linked.

Cross-circuit detection

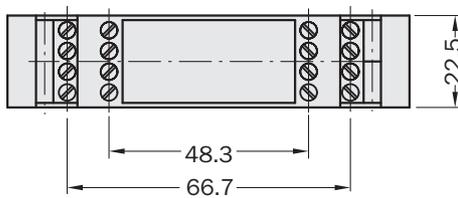

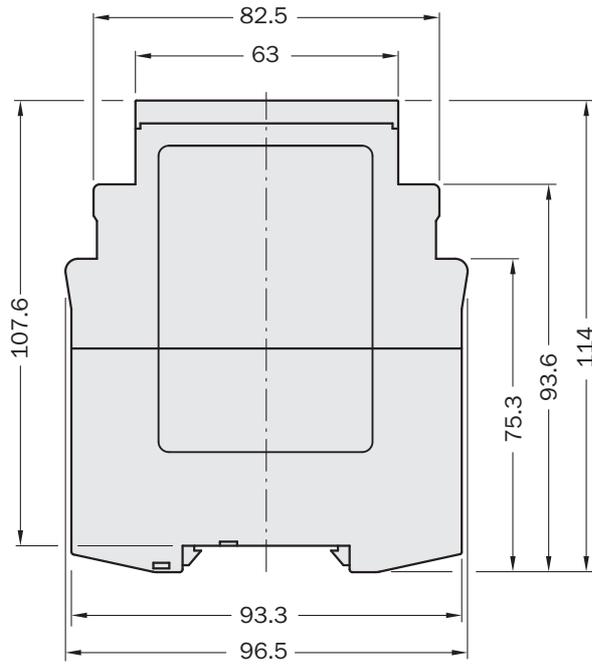

Cross-circuit is detected on dual-channel wired systems, if these are wired with opposing polarity.

Monitoring of synchronization

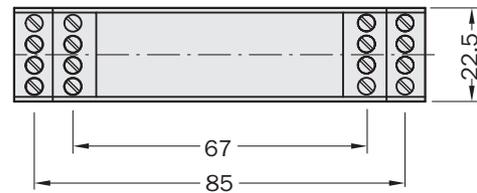

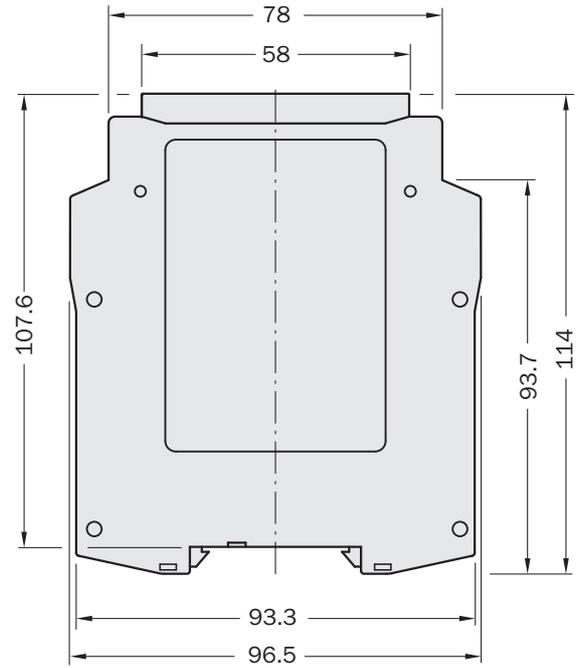

Only if input 2 closes no later than 0.5 sec after input 1, do the output circuits close. If input 2 closes before input 1, the synchronization monitoring will not be affected, and the output circuits will close. This monitoring only takes place in automatic reset.

Dimensions (W x H x D)	22.5 mm x 114 mm x 96.5 mm	
Weight	0.2 kg	

Internal circuitry

Function

After applying the supply voltage (LED SUPPLY illuminates), the normally open contacts remain open. If the connected sensor is not activated or the protective field of the connected electro-sensitive protective equipment (ESPE) is not broken (i.e., the input circuits are closed), then the normally open contacts close immediately in automatic reset; LEDs K1 and K2 illuminate. In the case of manual resetting, this only occurs after pressing and

releasing the reset button. The activation of the sensor or incursion into the protective field of the non-contact safety device (open state of one of the two input circuits) affects the opening of the normally open contacts (LED K1 and K2 off).

External device monitoring (EDM)

The unit can take over external device monitoring. The contactor monitoring system monitors the external relays by way of their normally closed contacts.

Manual reset

For manual resetting, a pushbutton must be connected to terminals S33 - S34. This reset is monitored.

Automatic reset

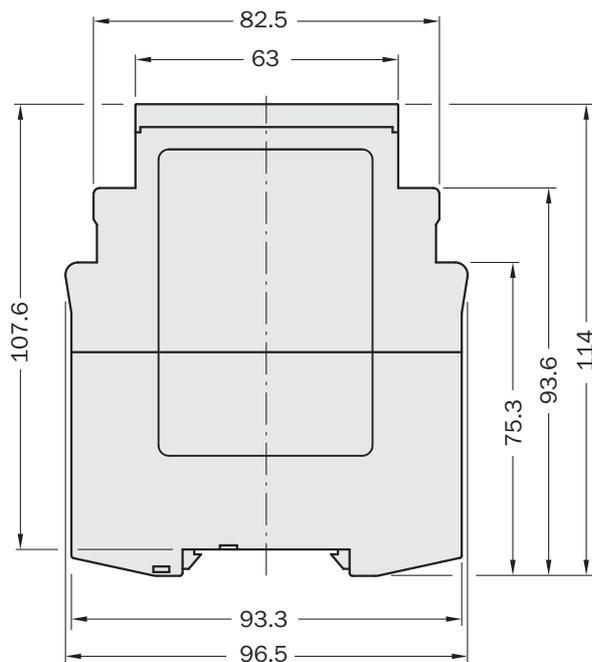

For ESPE's: S33 - S35 must be linked; for applications with potential free contacts on the input circuit, S12 - S35 must be linked.

Cross-circuit detection

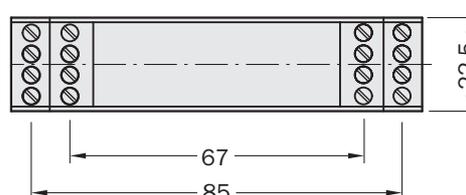

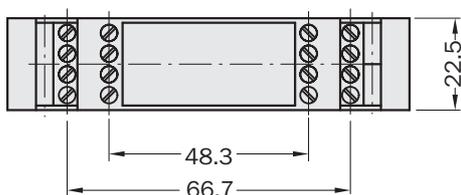

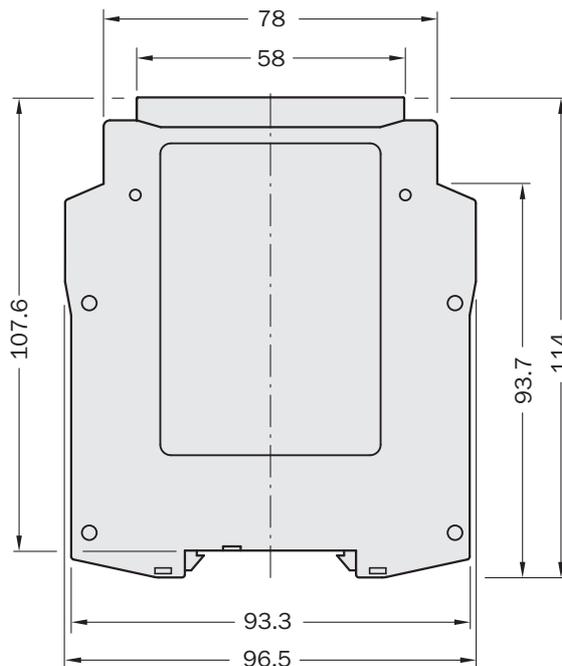

Cross-circuit is detected on dual-channel wired systems, if these are wired with opposing polarity.

Internal circuitry

Function

If the semiconductor outputs of the installed safety device (e.g., C4000, S3000) are energized, then the safety output contacts will close.

When at least one of the semiconductor outputs of the safety device becomes de-energized, then the output contacts revert back to open circuit status.

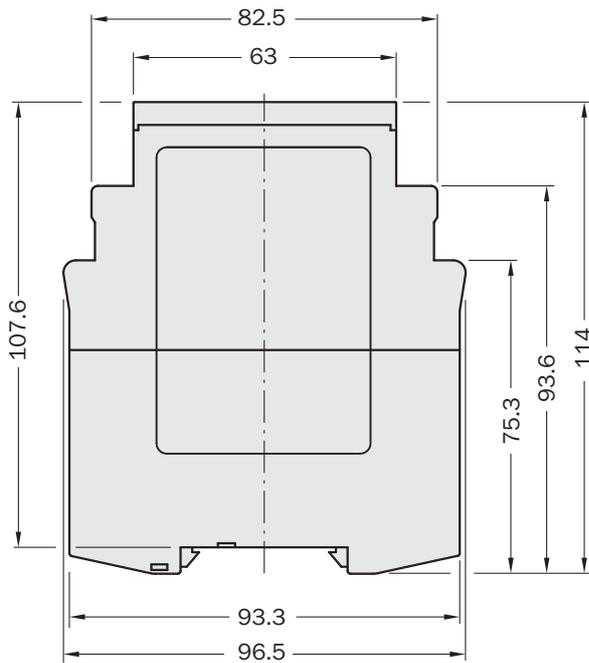

If restart interlock is needed, then this is achieved in the safety device, for example with a C4000 or S3000.

External device monitoring (EDM)

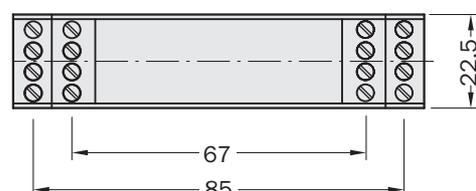

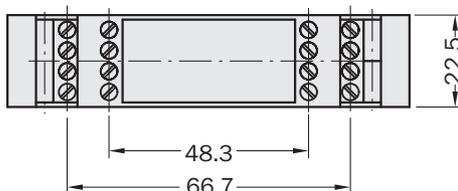

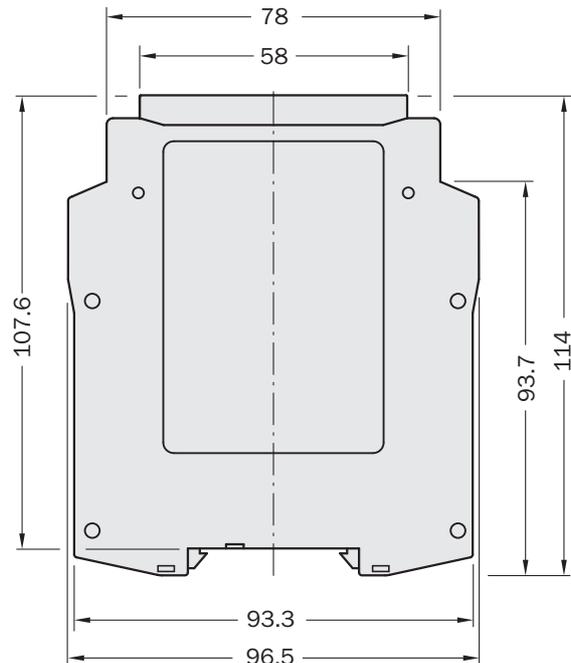

Category 3 or 4, which determines the performance level according to EN ISO 13849, requires monitoring of contactors for the detection of failures. This is provided in the connected protective device, for example in the C4000 or S3000. The normally closed contact (Y1 -Y2) in the UE10-30S unit is a part of this contactor monitoring system.

Weight		0.2 kg	

Internal circuitry

Function

The supply voltage of the contact expansion module is linked to the main unit's output contact. Upon applying the supply voltage to terminals A1 and A2, relays K1 and K2 are energized (the LEDs for both relays illuminate): The 4 output contacts close and the two normally closed contacts and the EDM (feedback) circuit switch to open circuit status. When the output contacts of the standard unit open (e.g., by activation of the emergency stop), the relays K1 and K2 de-energize: The normally open contacts open and the two normally closed contacts close.

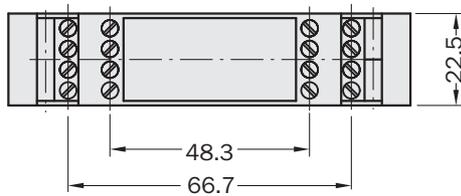

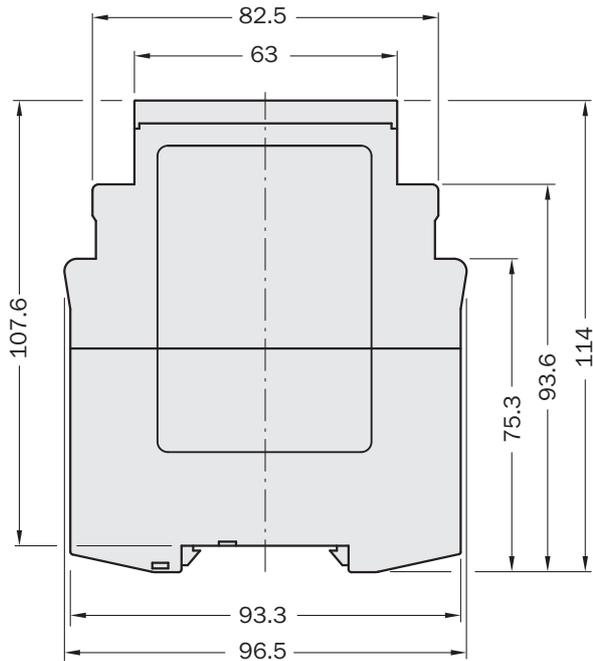

External device monitoring (EDM)

If external device monitoring is implemented in the connected main unit, then the normally closed contacts (Y1 - Y2) prevent the main unit from resetting when K1 and/or K2 do not de-energize.

Product description

- The UE11-4DX contact expansion module provides:
 - Additional output contacts in a main unit
 - Off-delayed outputs (0.5, 1, 2, 3 s, depending on model)
 - NC contact for external device monitoring (EDM)
- 2 LEDs for relays K1 and K2
- Screw-type or plug-in terminals

In-system added value

- Applicable with UE10 - UE48 main units

→ For more combinations, see annex

Internal circuitry

Function

The supply voltage of the contact expansion module is triggered by the standard unit's output contact.

Upon applying the supply voltage to terminals A1 and A2, relays K1 and K2 are energized (the LEDs for both relays illuminate):

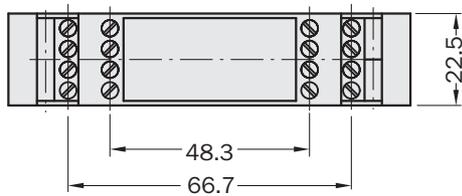

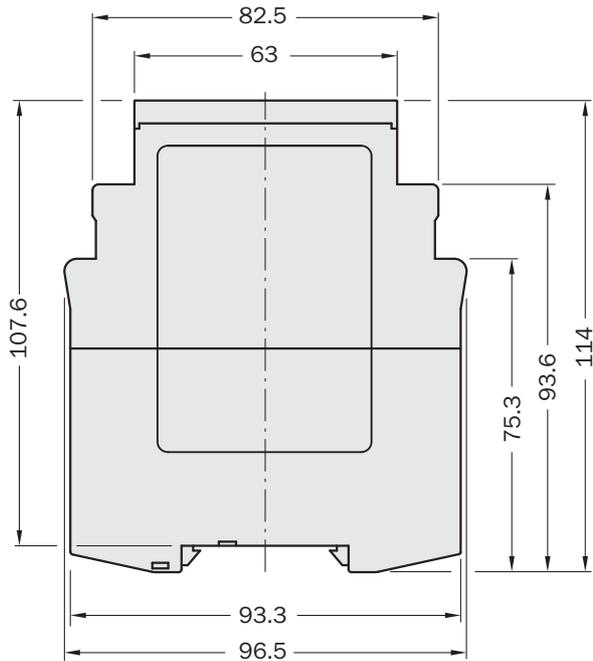

The 4 output contacts close and the two normally closed contacts and the EDM (feedback) circuit switch to open circuit status. When the output contacts of the standard unit open (e.g., by activation of the emergency stop switch), the relays K1 and K2 de-energize after a unit specific delay. These fixed switch-off delay times of 0.5 s, 1 s, 2 s and 3 s are according to the type. This is achieved by means of capacitors to ensure that the off-delay runs its full duration, even during power supply failures. Only after the delay period has expired do the relays K1 and K2 return to their neutral rest position. With the combination of UE11-4DX (with off-delayed) and a standard unit, stop category 1 (EN 418) can be realized.

External device monitoring (EDM)

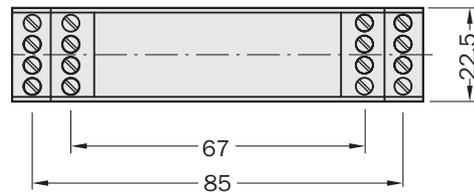

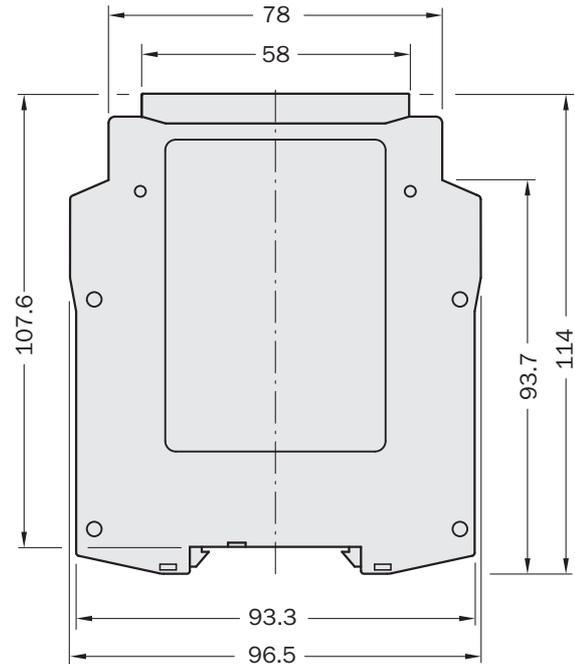

If external device monitoring is implemented in the upstream installed standard unit, then the normally closed contacts (Y1 - Y2) prevent the standard unit from resetting, when K1 and/or K2 do not de-energize.

Safety controllers

Technical overview and applications

Flexi Classic and Flexi Soft safety controllers are both modular and expandable units, which prevents unnecessary inputs and outputs. Using SICK's configuration tools, the planning engineer has the ability to quickly select sensors and actuators by dragging and dropping specific symbols into our easy-to-use software. This results in a complete connection diagram with

trouble-free electrical installation. Both the Flexi Classic and Flexi Soft can be optimally integrated with all safety sensors. Gateways for all leading networks (e.g., PROFINET IO, PROFIBUS-DP, CANopen®, Modbus TCP, Ethernet (TCP/IP)) are available. This helps minimize downtimes significantly.

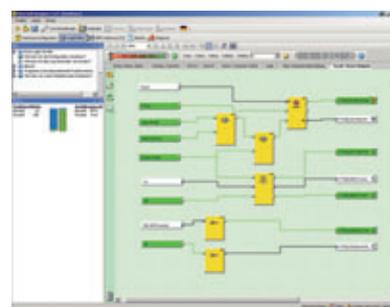

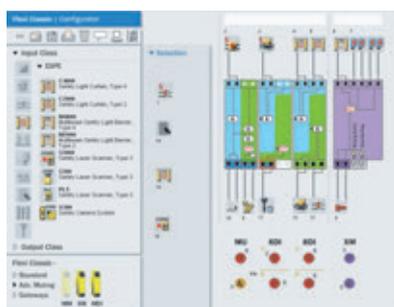

Impressively easy: Flexi Classic

- Function setting via rotary switch
- Easy configuration through certified programs (4 function blocks)
- Significant advantages over relays:
 - Less space required
 - Reduced wiring effort
 - Shorter response times
- Complete diagnostics through LED indicators on the modules results in less downtime

Intuitive software, modular hardware: Flexi Soft

- Intuitive configuration software with 38 certified function blocks
- Safe networking of up to 4 Flexi Soft stations without additional hardware (Flexi Link technology)
- Immediate verification of the safety function using the simulation mode
- Quick commissioning through configuration memory in the system plug

Flexi Classic Configurator: Just a few clicks to reach your goal

The Flexi Classic configurator is an immense help in preparing a Flexi system. You can place modules side by side; adding sensors and actuators using the drag and drop feature. Plus, the view of the internal logic makes design quick and easy. The programs produced can be set on the device using a screwdriver.

Flexi Soft Designer: Powerful logic to quickly create a project

From the easy-to-place modules and elements, to the logic simulation and the wiring, the Flexi Soft Designer is an intuitive tool throughout the configuration process. With 38 available logic blocks and the option to export/import application parts, it is easy to control safety-related functions.

Product description

The Flexi Classic series uses a safety control concept that enables different units and modules to be connected together based on the application requirements.

The plug-in style units enable communication between the individual units over an internal bus.

The connected sensors and the function are defined using rotary switches on the related units; except for the relay modules and the fieldbus modules, which are used for integration in a higher level controller without a safety function. These modules are output units and have no effect on the logic set or the function of the upstream units.

The Flexi Classic series comprises the following units:

- UE410-MU (main unit)
- UE410-XU (extension unit)
- UE410-8DI (input expansion unit)
- UE410-MM (muting main unit)
- UE410-XM (muting extension unit)
- UE410-MDI (muting expansion unit)
- UE410-2RO/-4RO (relay module)
- UE410-PRO/UE410-DEV/UE410-CAN/UE410-EN (gateway PROFIBUS-DP, DeviceNet, CANopen, Modbus TCP, Ethernet (TCP/IP), EtherNet/IP and PROFINET IO)

In-system added value

A Flexi Classic system always comprises a main unit (UE410-MU) or muting main unit (UE410-MM) and, as required, additional

extension units and an appropriate gateway.

Technical data overview

Safety integrity level	SIL3 (IEC 61508), SILCL3 (IEC 62061)
Performance level	PL e (EN ISO 13849)
Number of inputs	0 ... 96, depending on module combination
Number of EFI interfaces	2
Configuration interface	RS-232
Number of outputs	0 ... 48, depending on module combination
Fieldbus (depending on type)	EtherNet/IP, Modbus TCP, PROFIBUS-DP, PROFINET IO
Logical functions	AND, OR, NOT, XNOR, XOR
Safety functions	Emergency stop function, machine control (e.g., PSDI), differentiation between man and material (muting), control functions and operating mode selection

Product description

Flexi Soft is a programmable and modularly expandable safety controller capable of being integrated into various networks. The main module, FX3-CPU, is the CPU of the entire system. All input signals are monitored and processed via the safety logic stored in the memory plug. These signals are then used to switch system outputs through the FLEX BUS+ interface, which connects all units to one another. Additionally, the FX3-CPU1 main unit has an RS-232 interface that enables the Flexi Soft Designer to upload and change system settings.

The RS-232 port can also be used for permanent diagnosis (i.e., PLC or HMI). Additionally, the FX3-CPU1 main module has 2 EFI connections on it. The FX3-XTIO input/output extension module has 8 safety inputs and 4 safety outputs. The FX3-XTDI input expansion module has 8 safety inputs. Through integrated Flexi Link technology, up to 4 Flexi Soft stations can be linked to one another without any gateways or additional wiring.

In-system added value

Usage of enhanced sensor functions through the Enhanced Function Interface (EFI)

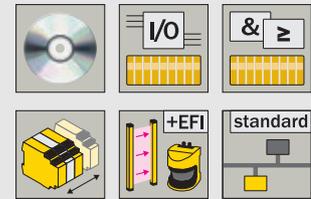

- EFI is a two-wire communication between safety sensor and controller.
- All EFI sensors connected to the Flexi Soft can be accessed and programmed via the Flexi Soft's RS-232 connection.
 - High-quality diagnostics provide fast and accurate results when availability is a priority.

- The following enhanced functions are available in combination with the EFI sensor. These functions are dependant on the type of sensor.
- Simultaneous field evaluation
 - Field switching
 - Decentral diagnostic information via Ethernet, as if one was directly connected to the sensor.
 - Evaluation from signals on Flexi Soft or attached network, and safety data forwarding.

Module	Number of inputs	Number of outputs	Number of function blocks	EFI interface	Fieldbus
Main unit	4 EFI inputs (FX3-CPU1)	-	255	2 (FX3-CPU1)	-
Extension unit	8	4	-	-	-
Input expansion unit	8	-	-	-	-
Relay module ¹⁾	-	2 (UE410-2RO) 4 (UE410-4RO)	-	-	-
Gateway	-	-	-	-	✓ ²⁾

¹⁾ UE10-2FG/UE12-2FG safety relays may be used as an alternative (cf. N-57).

²⁾ PROFIBUS-DP, Modbus TCP, EtherNet/IP, PROFINET IO

System plug not included

- System save-in-memory plug for a fast installation
- Modularly expandable (12 to 144 in/outputs)
- Intuitive software: Flexi Soft Designer
- Usage of the enhanced sensor function via EFI interface
- Safe linking of up to 4 Flexi Soft safety controllers

Configuration interface	Internal bus (FLEX BUS+)																				

¹⁾ Via FLEX BUS+ without current on X1 ... X8

²⁾ On each test pulse output (X1 or X2). A maximum of 8 testable sensor cascades per module (with max. 30 mA each) are possible. The total current of the Flexi Soft system is limited to a maximum of 1.28 A. This means that, for example, the test pulse outputs are able to supply 32 sensors with 30 mA inputs each and an additional 64 inputs on FX3-XTIO or FX3-XTDI modules.

Network solutions

Technical overview and applications

A distributed system is the best choice if maximum flexibility with minimum overall costs is required. Today, remote solutions must be open, scalable, and expandable. Modern software tools allow the designer to optimize the system and application performance.

Network solutions from SICK permit the integration and evaluation of safety sensors in all the leading industrial bus systems, from complete safety automation with configurable safety controllers to remote safety I/Os. Simple integration of advanced sensors (e.g., safety laser scanners) and advanced diagnostics available over the network provides fast troubleshooting for any application.

Sensor integration: PROFIsafe and AS-Interface Safety at Work

- Decentralized input modules up to IP 67 for simple remote safety I/O without the need for a control cabinet
- Configuration and diagnostics down to the sensor level
- Provides both safe, unsafe, and diagnostic data over the same bus connection, which reduces costs and the need for additional unsafe I/O

Complete safety solution: DeviceNet Safety

- Complete safety solution with compact controller and remote I/Os
- Can provide both centralized or decentralized safety control solutions
- Configuration and diagnostics down to the sensor level
- IP 67-rated remote safety controller provides a safety solution without a separate control cabinet

Utilize additional sensor functionality: EFI gateways

- For configuration and diagnostics between advanced SICK safety sensors and all the leading industrial bus systems
- Provides diagnostic data and for some networks, safe data over the fieldbus for the connected sensors

Applications:

- Storage and conveyor technology
- Car industry
- Packaging industry

Applications:

- Storage and conveyor technology
- Robotics
- Handling systems

Applications:

- Car industry

	Safety remote controller	12/6	-/2	IP 67	2 ¹⁾	Bi-directional communication ²⁾	UE4457	P-32
Ethernet (TCP/IP) EFI gateway	-	-	IP 20	2	Bi-directional communication ²⁾	UE1840	P-42	
CANopen EFI gateway	-	-	IP 20	2	Bi-directional communication ²⁾	UE1940	P-42	

¹⁾ ESPE without EFI communication can also be connected to the SDL connection

²⁾ Usage of the expanded functions in the connected safety sensors on the SDL/EFI connection; further information → page A-8

- No control cabinet needed
- Central diagnostics
- Less wiring expenditure
- Safety Data Link (SDL) to SICK safety components

Technical data overview

Fieldbus	PROFIBUS PROFI-safe
Number of safety inputs	8 dual-channel or 16 single-channel
Number of SDL connections	2
Enclosure rating	IP 67
Safety integrity level	SIL3 (IEC 61508)
Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)

Product description

- Easy configuration and diagnosis with the aid of Windows-based CDS software (Configuration & Diagnostic Software)
- Offline configuration of the system without FPLC is possible
- Support for PROFI-safe V1.30 (10/2002) and V2.0 (11/2005)
- Support for PROFIBUS DP V1:
 - Cyclic communication with DP-Master Class 1 (central control)
 - Acyclic communication with DP-Master Class 2 (configuration and diagnosis tool)
- 2 SDL connections to connect active SICK safety components
- Configuration and diagnostics of all the components connected to the SDL connection via the configuration connection of the UE4155
- Usage of the expanded functions of the safety components with SICK device communication

Applications

General system data

Fieldbus	PROFIBUS PROFIsafe
Enclosure rating	IP 67
Safety related parameters	
Safety integrity level	SIL3 (IEC 61508)
Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	1.33×10^{-9} (EN ISO 13849)
T _M (Mission Time)	20 years (EN ISO 13849)
Supply voltage V _S	24 V DC (19.2 V DC ... 28.8 V DC) ¹⁾
Power consumption	Max. 9 A

¹⁾ The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1.

Field-signal inputs

Input voltage HIGH	24 V (11 V ... 28.8 V)
Input delay	Configurable, 0 ms ... 90 ms

Field-signal outputs

Output voltage HIGH	V _S , without load, switched-on
Switching current	0 mA ... 700 mA
Minimum current for fault monitoring	7 mA ... 40 mA, on field-signal connections 7 and 8, only when the connection is configured as an output for a muting lamp.

SDL connections

Input current	Max. 1.4 A
Internal resistance	Max. 0.3 Ohm

OSSD inputs

Input voltage HIGH	24 V (13 V ... 28.8 V)
Test pulse width	Max. 700 µs
Test pulse rate	Max. 500 Hz

PROFIBUS connection

Baud rate	9.6 kbit/s ... 12 Mbit/s
Address range	3 ... 125
Ident number	071A hex

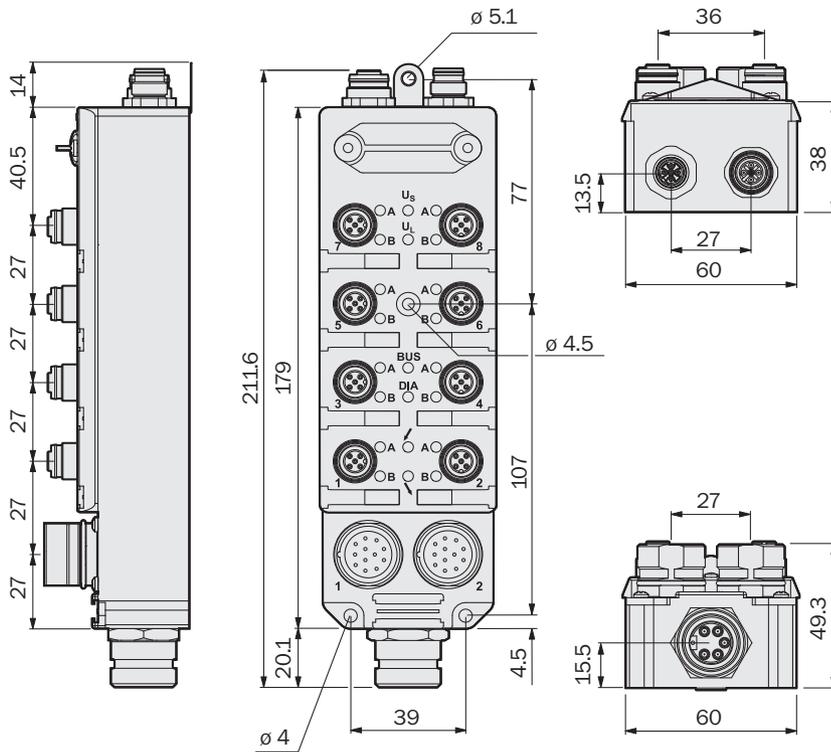

Applications

Safety command devices	✓
Electro-mechanical safety switches	✓
Non-contact safety switches	✓
Opto-electronic protective devices	✓
Two-hand control systems	✓
Operating mode selector switch	✓
Muting sensors	✓
Muting lamp	✓

Functions

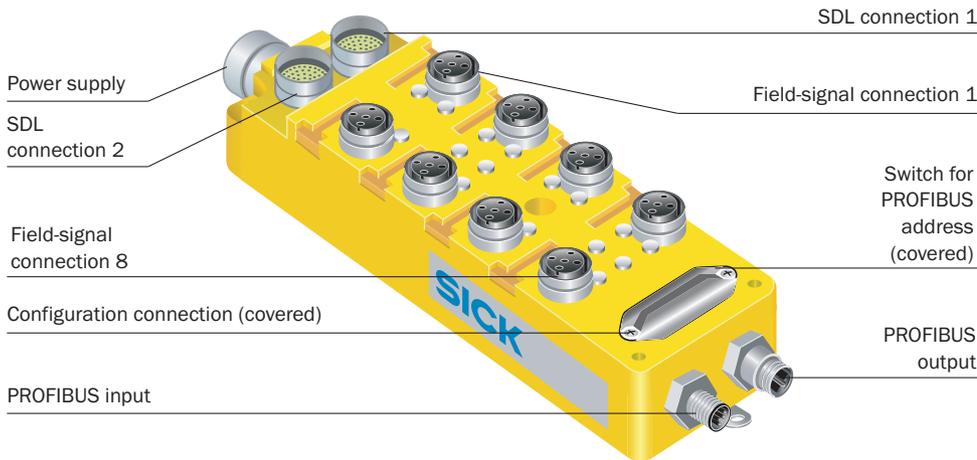

Safe device communication via EFI/SDL	✓
Reset/restart	Manual, automatic/configurable

Emergency stop, safety door on the field-signal connection

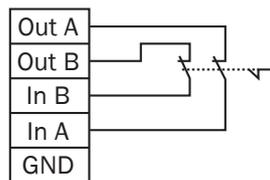

Single-channel

Dual-channel with common testing

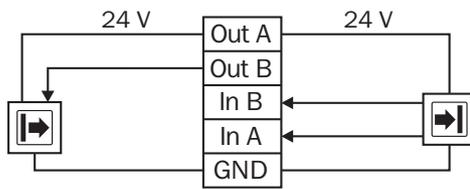

Dual-channel with isolated testing

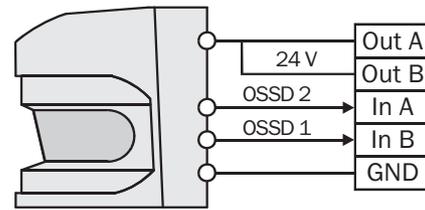

Depending on the required performance level, the emergency stop can be initiated using a single-channel, dual-channel with common testing or dual-channel with isolated testing.

The performance level classification of components with contacts (e.g., safety door switches and emergency stops) depends both on the connection type (single-channel/dual-channel) and on the configuration (single/redundant, testing type). Therefore, the appropriate switching components for the required performance level and switching type must be selected.

Electro-sensitive protective equipment (ESPE) on the field-signal connection

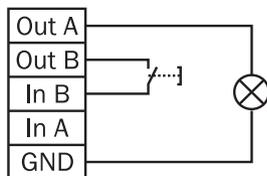

When electro-sensitive protective equipment (ESPE) is connected, the sender and receiver can be used with a system's input and output. Care must be taken to ensure the current consumption of the ESPE is within the rated limits of the output.

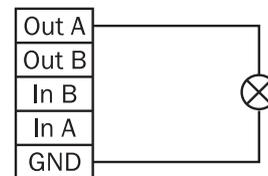

You can use output Out B to test the sender. The switching outputs of the receiver are present on inputs In A and In B.

Control switch with indicator display on the field-signal connection

The indicator display (Out A) is being controlled via an FPLC.

Muting lamp on the field-signal connection

When fault monitoring of the muting lamp is required, the muting lamp must be connected to channel A of either output 7 or 8, as only these outputs are capable of monitoring lamp failures.

Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)

Product description

SICK's UE4470 flexible safety controller integrates and evaluates any combination of safety input and actuator devices into DeviceNet Safety™ networks using local or remote safety capable inputs and outputs. Safety devices can now be logically combined for coherent machine safety control strategies. Applications include packaging machinery, robot cells, machine tools and transfer lines.

Status, diagnostic and error information can be easily accessed locally or through the network. Integrated basic and application-specific function blocks are provided for simple and complex control capability. Logical operations include but are not limited to: AND, OR, Exclusive OR, Exclusive NOR, NOT, ON-delay timer, OFF-delay timer, restart interlock, external device monitoring (EDM), emergency stop, safety gate monitoring, ESPE/AOPD (e.g., safety light curtain), enabling switch, two-hand control, automatic reset, and operating mode selector switch.

Applications

Ordering information

Functionality	Number of safety inputs	Number of test/signal outputs (with current monitoring)	Type	Part no.
Flexible safety controller	8 dual-channel or 16 single-channel	4 (0)	UE4470-22EE690	1028312

DeviceNet Safety™

- Local/remote connection of safety sensors and actuators
- Decentralized evaluation of safety sensors and actuators
- Easy upgrade of installed sensors and actuators
- Logical combinations between sensors and actuators
- Large library of approved safety function blocks
- Remote configuration of other DeviceNet Safety™ devices via network

Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)

Product description

SICK's IP 20-rated UE4421 remote I/O bus modules integrate safety sensors and actuators using DeviceNet Safety™. The UE4421 series of remote I/O bus modules are configured using an EDS file via the DeviceNet Safety™ network.

Versions include semiconductor safety inputs only, a combination of semiconductor safety inputs and safety outputs, and semiconductor inputs with relay-based safety outputs.

Applications

Category	Category 4 (EN ISO 13849)
Performance level	PL e (EN ISO 13849)

Product description

The UE4457 safety remote controller by SICK integrates and evaluates any combination of safety sensors and actuators. This can either be achieved in stand-alone mode or in networked applications. The UE4457 can function as a safety controller and/or remote I/O device. It allows easy configuration and diagnostics of sensors with SICK safety communication. The Safety Enable functionality allows standard masters (e.g., PLC) to control the safety outputs of the UE4457 directly, eliminating the need for any additional safety PLC. The Fast Shut-Off functionality enables a fast and constant reaction time of 8 ms through direct routing of local safety inputs to the safety outputs of the UE4457.

- Compact IP 67-rated safety controller in technology
- Wide selection of certified function blocks
- Optimized system reaction times in stand-alone or networked operation
- Standard and safety PLC may control safety outputs with safety having priority
- 6 dual-channel or 12 single-channel safety inputs with 12 test outputs
- Easy integration and diagnostics of SICK's intelligent safety sensors via SICK Safety Data Link (SDL)
- 2 dual-channel (2A) bipolar safety outputs

Emergency stop, safety door on the field-signal connection

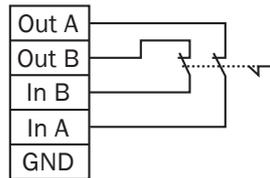

Single-channel

Dual-channel with common testing

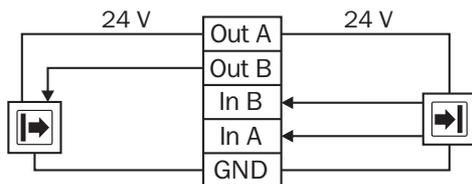

Dual-channel with isolated testing

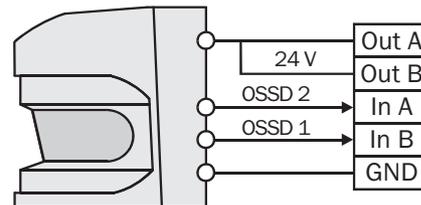

Depending on the required performance level, the emergency stop can be realized using a single-channel, dual-channel with common testing or dual-channel with isolated testing.

The performance level classification of components with contacts (e.g., safety door switches and emergency stops) into a performance level depends both on the connection type (single-channel/dual-channel) and on the configuration (single/redundant, testing type). Therefore, the appropriate switching component for the required performance level and switching type must always be selected.

Electro-sensitive protective equipment (ESPE) on the field-signal connection

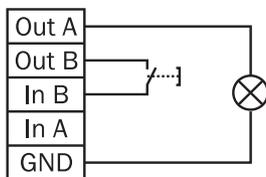

When electro-sensitive protective equipment (ESPE) is connected, sender and receiver can be used with a system's input and output. Care must be taken to ensure the current consumption of the ESPE is within the rated limits of the output.

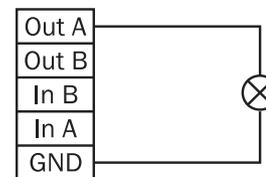

You can use output Out B to test the sender. The switching outputs of the receiver are present on inputs In A and In B.

Control switch with indicator display on the field-signal connection

The indicator display (Out A) is being controlled by the UE4457, a safety PLC, or a standard PLC.

Muting lamp on the field-signal connection

When fault monitoring of the muting lamp is required, the muting lamp must be connected to channel A of either output 7 or 8, as only these outputs are capable of monitoring lamp failures.

- 2 inputs (EFI interface) for the connection of intelligent SICK safety solutions
- Easy configuration and diagnostics with the aid of CDS (Configuration & Diagnostic Software)

Technical data overview

Fieldbus/communication interface (depending on type)	PROFINET IO PROFI-safe, PROFIBUS PROFI-safe, PROFIBUS, CANopen®, Ethernet (TCP/IP)
Number of EFI interfaces	2
Enclosure rating	IP 20

Product description

The family of EFI gateways is used to connect intelligent SICK safety devices to fieldbus and Ethernet networks.

Properties of EFI gateways:

- All SICK components connected to the EFI connection can be easily configured and diagnosed over the different fieldbus networks using CDS.

Properties of UE1840:

- An e-mail alert can be sent from information provided by the connected EFI devices. (e.g., contamination of the S3000)

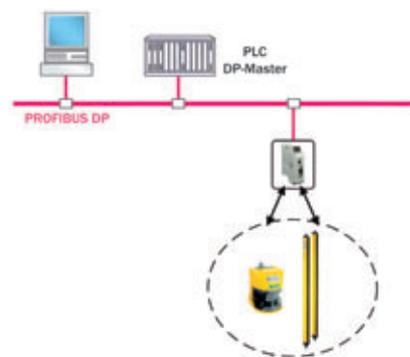

Properties of UE1140, UE1940, UE4140 and UE4740:

- Configurable process image with information from the EFI sensors connected to the PLC and from the PLC to the sensors (input and output)
- Support of PROFIBUS-DP V1 (UE1140, UE4140)
- Support of PROFINET IO Conformance Class A, LLDP, SNMP, MIB II, cyclic I/O communication, acyclic read/write services for communication via TCI interface, diagnostics alarm, TCP/IP communication via Port 9000 (UE4740)
- Support of PROFI-safe V2.00 (UE4140, UE4740)
- Support of CANopen (UE1940)

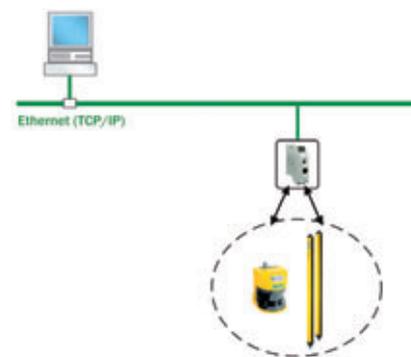

Applications

- S3000/S300 safety laser scanners
- M4000 multiple light beam safety devices
- C4000 safety light curtains

Device overview and connections

PROFIBUS EFI gateway UE1140

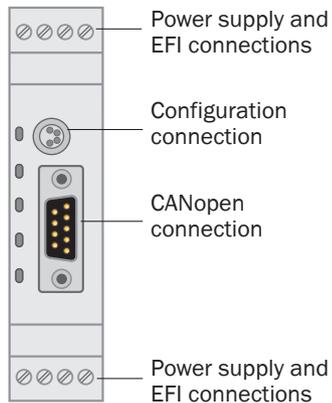

- Supply and EFI connections
 - Terminal 1 + 8: Voltage supply EFI gateway
 - Terminal 2 + 7: Functional earth for screened EFI cable
 - Terminal 3 + 4: Connection 2 for intelligent SICK EFI safety devices
 - Terminal 5 + 6: Connection 1 for intelligent SICK EFI safety devices
- Configuration connection:
 - To directly connect a PC and configure the system using the SICK CDS
- PROFIBUS connection (9-pin D-SUB):
 - For connection to PROFIBUS master or other PROFIBUS slaves

Ethernet EFI gateway UE1840

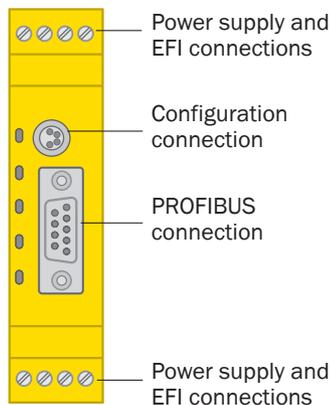

- Supply and EFI connections
 - Terminal 1 + 8: Voltage supply EFI gateway
 - Terminal 2 + 7: Functional earth for screened EFI cable
 - Terminal 3 + 4: Connection 2 for intelligent SICK EFI safety devices
 - Terminal 5 + 6: Connection 1 for intelligent SICK EFI safety devices
- Configuration connection:
 To directly connect a PC and configure the system using the SICK CDS
- Ethernet connection (RJ-45):
 For connection to Ethernet network for configuration and diagnostics

CANopen EFI gateway UE1940

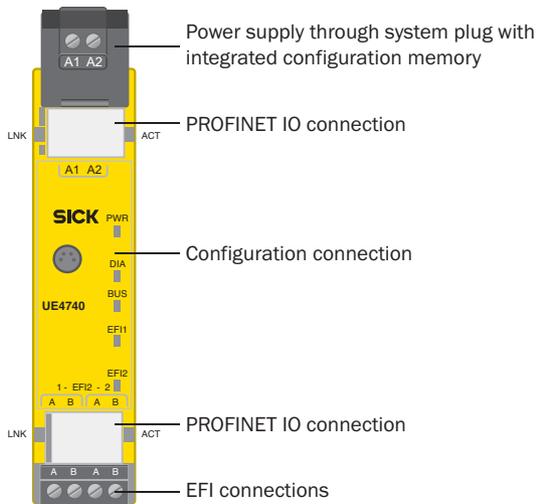

- Supply and EFI connections
 - Terminal 1 + 8: Voltage supply EFI gateway
 - Terminal 2 + 7: Functional earth for screened EFI cable
 - Terminal 3 + 4: Connection 2 for intelligent SICK EFI safety devices
 - Terminal 5 + 6: Connection 1 for intelligent SICK EFI safety devices
- Configuration connection:
 To directly connect a PC and configure the system using the SICK CDS
- CANopen connection (9-pin D-SUB):
 For connection to CANopen networks

PROFIBUS PROFIsafe EFI gateway UE4140

- Supply and EFI connections
 - Terminal 1 + 8: Voltage supply EFI gateway
 - Terminal 2 + 7: Functional earth for screened EFI cable
 - Terminal 3 + 4: Connection 2 for intelligent SICK EFI safety devices
 - Terminal 5 + 6: Connection 1 for intelligent SICK EFI safety devices
- Configuration connection:
 To directly connect a PC and configure the system using the SICK CDS
- PROFIBUS connection (9-pin D-SUB):
 For connection to PROFIBUS master or other PROFIBUS slaves

PROFINET IO PROFIsafe EFI gateway UE4740

- Supply and EFI connections
 - Configuration memory terminal A1 + A2: Voltage supply EFI gateway
 - Terminal EFI2_A + EFI2_B: Connection 2 for intelligent SICK EFI safety devices
 - Terminal EFI1_A + EFI1_B: Connection 1 for intelligent SICK EFI safety devices
- Configuration connection:
 - To directly connect a PC and configure the systems using SICK CDS
- Two PROFINET IO connections (RJ-45)
 - For connection to PROFINET IO Master or other PROFINET IO Slaves

- Safety engineering: simple, direct and fast
- Attain CE marking systematically, efficiently and in compliance with the standards
- Structured implementation of the Machinery Directive and standards
- Hazard analysis and risk assessment
- Directives with full text
- Simplified documentation

Product description

Software for safety engineering leads, step-by-step, towards CE certification and provides support during risk assessment. It also simplifies the documentation process.

Add-on modules are:

- Operating instructions assistant
- Check and acceptance assistant
- Standards packages with standards given in full, plain text

TÜV, Dekra and Trade Associations, as well as many companies, use Safexpert to assist in achieving high levels of safety.

Benefit

Simplified documentation

- CE marking and documentation in a single step
- Parallel preparation in drafting operating manuals
- Simplified adaptation when incorporating changes

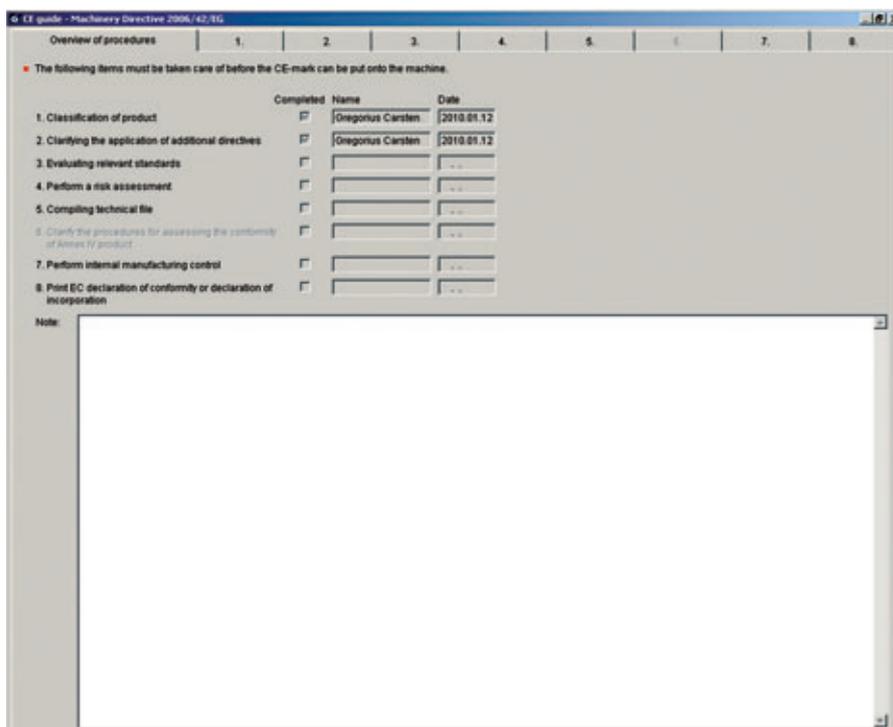

Increased safety

- A structure for implementing the Machinery Directive
- No unanswered points are forgotten due to status monitoring
- Comprehensive risk assessment
- Proof of due diligence reduces liability

Savings in time and costs

- Re-use of solutions saves up to 70 % time
 - Work parallel on projects
- "We have saved up to 70 % in terms of time and effort in carrying out CE certification by using Safexpert. Consequently, we can process a greater number of projects on a parallel basis. This shortens the overall throughput times for the projects and machines are available for service much more quickly." (Siemens VDO Automotive)

CE guidelines

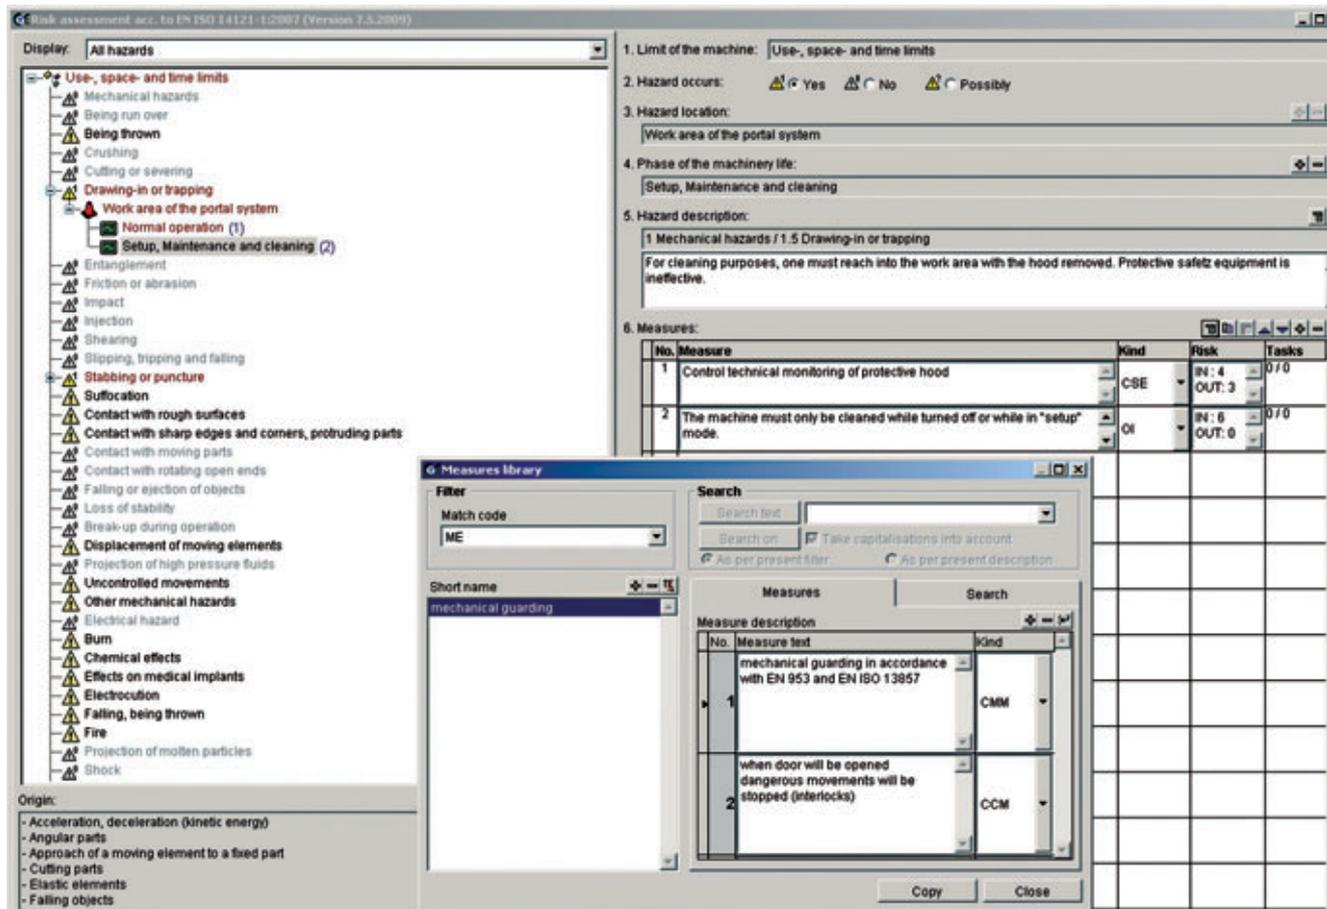

At the end of these 8 steps you can print out the hazard analysis and the declaration of conformity directly.

Further information	Page
→ Product information	Q-2
→ Systematic safety	A-0
→ Services	B-0

Risk assessment

Safexpert guides the user through the conformity assessment procedure as per the Machinery Directive as well as the EN ISO 12100 standard. The performance level according to EN

ISO 13849 can be determined through the integrated interface to SISTEMA, a free available software wizard developed by DGUV, a testing and certification body in Germany.

Additional standards available upon request

StandardManager

License editions

Designation	Description
StandardManager	Can be used separately; supplied with Safexpert Compact and Safexpert Professional; includes floating and network-compatible licenses

Data packages

Designation	Description	Country/region
EU Plus	Data records on standards and directives that are or have been published in the Official Journal of the EU that pertain to low voltage, EMC, ATEX and pressure equipment directives. It contains the relevant standards from CEN, CENELEC and EU and is an ideal supplement to the MRL-EU package.	For CE-certification, EU
MRL-DE	Replaces the previous SDR-DE. Data records on standards and technical specifications based on "9. GPSGV" (German ordinance on the equipment and product safety law), e.g. for the GS marking. It contains the related data from DIN, VDE, DKE, HVBG, VdTÜV, BRD.	For CE-certification, Germany
MRL-EU	Replaces the previous SDR-EU. Data records on standards and directives that are or have been published in the Official Journal of the EU that pertain to the Machinery Directive. It contains the relevant standards from CEN, CENELEC and EU.	For CE-certification, EU

Check and acceptance assistant

Designation	Description	Standard/regulation	Language of standard/regulation
Check and acceptance assistant	Incl. checklist according to the Machinery Directive 2006/42/EC. Can be used separately; includes floating and network-compatible licenses	-	English
			German
Checklist for the check and acceptance assistant	-	According to German Health and Safety at Work	German
		According to EN ISO 12100	German

Operating instructions assistant

Designation	Description
Operating instructions assistant	Safexpert required; for Safexpert Basic, please also order the template for operating instructions

Updates

Service and update contracts¹⁾

Designation	Description
Update contract for Safexpert Basic	Includes the update contract for the "Standard" package of standards
Update contract for Safexpert Compact	
Update contract for Safexpert Professional	Includes the update contract for the "Standard" package of standards; 70 % discount on new standards in the standards packages
Update contract for Standard Manager	-
Update contract for Safexpert check and acceptance assistant	
Update contract for operating instructions assistant	
Update contract for standard package Standard Plus	Full-text standards will cost an additional 30 %

¹⁾ A contract is valid for 1 year. If the contract is not cancelled on the termination date, it is automatically extended for another year.

Abbreviation/term	Explanation
A	
Actuation duration (reset button)	Time that a reset button must be operated to reset the safety relay. → Reset/restart
Actuator, actor	Actuator: component, e.g., servomotor, clutch, solenoid valve or similar, for intervening in the process.
Actuator-Sensor Interface	Open bus system for the lowest automation level. Enables sensors, actuators and integrated systems to be easily connected to the first control level. Master-slave principle, up to 496 binary outputs per network, analog I/Os possible, electronic address setting over the bus connection, unscreened 2-core ribbon cable, information and power supply on one cable, reverse-polarity protected connection technology. → www.as-interface.com
ADO Application diagnostic output	Configurable signal output that indicates a specific status of the protective device.
Ambient temperature, max.	The highest permissible temperature of the ambient air, or another medium, at which the full functionality of a piece of equipment is still guaranteed.
Ambient temperature, min.	The lowest permissible temperature of the ambient air, or another medium, at which the full functionality of a piece of equipment is still guaranteed.
ANSI American National Standards Institute	Promotes and manages American industrial standards. → www.ansi.org
AOPD Active opto-electronic protective device	A device whose sensing function is performed by opto-electronic emitting and receiving elements detecting the interruption of optical radiations generated within the device by an opaque object present in the specified detection zone (<i>IEC/TS 61496-2, CLC/TS 61496-2</i>). In DIN EN 692 "Mechanical presses", EN 693 "Hydraulic presses" and EN 12622 "Hydraulic press brakes", the abbreviation AOS is used as a synonym for AOPD .
AOPDDR Active opto-electronic protective device responsive to diffuse reflection	Device with a sensor function, produced by opto-electronic sender and receiver elements, that detects the diffuse reflection of light, generated by the device and reflected by an object in a defined two-dimensional protective field (<i>IEC/TS 61496-3, CLC/TS 61496-3</i>).
AOS	→ AOPD
AS-Interface Safety at Work	Extension of the AS-interface system with safety-related components that uses a combination of AS-interface safety monitor and safe AS-interface bus nodes.
AS-Interface Safety at Work Safety Monitor	One or more safety monitors integrated in the AS-interface system monitor safe AS-interface bus nodes and shut down the protected part of the machine so that the dangerous state of the machine is brought to an end.
A-type standards	Basic safety standards that contain basic terminology, principles of design, and general aspects that apply to all machinery, devices and systems.
B	
B _{10d}	Number of cycles after which a dangerous failure has occurred on 10 % of the components (for pneumatic and electromechanical components).
Beam coding	Beam coding ensures that the receiver only detects and evaluates light from the sender to the receiver.
Beam separation	Distance between the centers of the beams on a multi-beam photoelectric safety switch.
Blanking	Blanking of a specific section of the protective field for a safety light curtain. This section is then inactive. There are two types of blanking: <ul style="list-style-type: none"> ▪ Fixed blanking permits a specific, fixed part of the protective field to be blanked. This function is selected, e.g., if a fixed part of a unit protrudes into the protective field. ▪ Floating blanking permits a specific number of light beams from the safety light curtain to be interrupted without the output of a stop signal. This function is selected if the permitted interruption of the protective field does not relate to a fixed position in the protective field, e.g., if a cable or hose is moved through the protective field. In both cases, the detection capability of the ESPE in the residual protective field is ensured.

Abbreviation/term	Explanation
Blind zone	Zone in front of a sensor in which an object or a reflector is not detected.
B-type standards	<p>Group safety standards that address a safety aspect or a type of safety-related equipment that can be used for a wide range of machinery, devices and systems.</p> <ul style="list-style-type: none"> ▪ B1-type standards address special safety aspects, e.g., the electrical safety of machinery (IEC 60204-1/EN 60204-1), the calculation of safety distances (ISO 13855). ▪ B2-type standards address safety equipment, e.g., two-hand controls, interlocking equipment, pressure-sensitive protective equipment, guards, electro-sensitive protective equipment (IEC 61496-1/EN 61496-1).
Bus system, bus	<p>Common cable for the transmission of data and control information between different components and systems using a defined protocol. A differentiation is to be made between parallel and serial buses.</p> <ul style="list-style-type: none"> ▪ Parallel bus systems have a large number of wires that allow data, address or control information to be transmitted as parallel bits. They are used as plug-in bus systems for the connection of plug-in modules and as peripheral buses for connecting computers to their local I/O devices. ▪ Serial bus systems transmit data between components that are distributed over a wide area in a system. This data is transmitted as serial bits using a common medium (two-core or multi-core cable, coaxial cable or fiber-optic cable) and, as a result, drastically reduce the wiring effort compared to conventional wiring. Familiar examples are: DeviceNet, PROFIBUS, Interbus, CAN, PROFINET IO, AS-interface, etc.
C	
Cascadable	Describes the feature, particularly on light curtains, that allows a basic device (host) to be connected by a cable to an additional device(s) (guest).
Category	Categorization of the safety-related parts of a control system in relation to their resistance to failures and their subsequent behavior in the event of a failure.
CDS	Configuration & diagnostic software Configuration and diagnostics software for SICK safety systems.
CE label	This label on products comprises the letters CE and indicates conformity with all EU directives that apply to the labeled product. The label states that the person or legal entity that applied the label, or had it applied, has ensured that the product complies with all the Union's directives for complete harmonization and has been subjected to all the stipulated conformity assessment procedures.
CENELEC	Comité Européen de Normalization Electrotechnique European Committee for Electrotechnical Standardization. Responsible for the harmonization of electrotechnical standards within the European Union and the entire European Economic Region. → www.cenelec.be
CLC	Prefix for standards adopted by CENELEC.
Concurrence monitoring	Simultaneous operation of the start buttons is monitored and is stipulated for two-hand controls. The output contacts are only switched if the state of both start buttons changes within 0.5 s.
Contamination control	Prior to the failure of the sensor, the contamination control indicates an unsatisfactory signal reserve due to maladjustment or contamination (for optical sensors).
Cross-circuit/short-circuit detection	Detection of cross-circuit/short-circuit, or a reduction in the insulation resistance between contact and contact, or short-circuit between core and core, or more than one single conductor cable.
CSA	Canadian Standards Association The Canadian Standards Association prepares standards for improving public safety and health, protecting the environment and easing trade. CSA tests and certifies the electrical properties and the safety of products. It is recognized by → OSHA as a national, recognized test laboratory for testing all products that fall under the responsibility of OSHA. → www.csa.ca

Abbreviation/term	Explanation
C-type standards	C-type standards contain all safety requirements for a specific machine or a type of machine. If this standard exists, it has priority over the A-type or B-type standard. Nevertheless, a C-type standard can refer to an A-type standard or a B-type standard. If there is no C-type standard for a machine, conformity can be achieved based on the A-type or B-type standard. In all circumstances, the requirements of the Machinery Directive must be met.
D	
Dangerous state	State that can result in injuries to people. Safety devices prevent this hazard if the protective device is used correctly.
DeviceNet™	Simple CAN-based communication system for networking industrial automation equipment with higher-ranking control equipment. The transmission medium uses two twisted, screened pairs of wires inside one cable. One pair is used for communication and the other for the supply of power to the equipment connected. → www.odva.org
E	
EDM External device monitoring	Means by which the electro-sensitive protective equipment (ESPE) monitors the state of control devices that are external to the → ESPE (IEC 61496-1/EN 61496-1). EDM can be realized by safe control solutions. → Monitoring function for downstream devices
EFI Enhanced function interface	Safe SICK device interface for the transmission of safety relevant signals. A bus interface to a safe fieldbus is possible using the SICK network solutions.
EMC Electromagnetic compatibility	Ability of a piece of equipment to work satisfactorily in its electromagnetic environment and, at the same time, not to excessively interfere with other pieces of equipment.
Enclosure ratings	Enclosure ratings describe a machine's or sensor's level of protection against physical contact and penetration of foreign bodies and water. IEC 60529 describes standardized degrees of protection with which the housing of a product complies if the product is correctly installed. The enclosure rating code starts with the letters IP (ingress protection); the first digit indicates the level of protection against accidental contact and foreign bodies. The second digit describes the protection against the penetration of water. In industry, an enclosure rating of IP 65 has become established as the standard.
Entry/Exit	Innovative muting alternative for access protection: Muting sensors and muting lamps are no longer required. Additional protection measures (e.g., hinged doors) are generally not required.
ESD Electrostatic discharge	Electrostatic discharge: Equalization of charge between differently electrostatically charged fixed, gaseous or liquid media. The currents generated during discharge can damage or destroy electronic components, or impair the function of electronic devices. These effects on devices are covered by legislation on electromagnetic compatibility. When handling electronic components, assemblies and devices, discharges from the body during e.g., transport, mounting, testing, repair and service, are of significance.
ESPE Electro-sensitive protective equipment	Assembly of devices and/or components working together for protective tripping or presence-sensing purposes and comprising, as a minimum (IEC 61946-1/EN 61946-1): <ul style="list-style-type: none"> ▪ a sensing device ▪ controlling/monitoring devices ▪ output signal switching devices (OSSD) They are used to protect people at machines and systems that have a risk of injury. They cause the machine or system to adopt a safe state before a person can be exposed to a hazardous situation.
F	
Fieldbus	Bus system in close proximity to the process for the direct connection of intelligent sensors and actuators. On a fieldbus, smaller quantities of data are transmitted digitally between sensors and actuators and control equipment. The data must be transmitted as quickly as possible, i.e. the data should be transmitted close to real time. In addition, a fixed minimum and maximum response time must be guaranteed.

Abbreviation/term	Explanation
FSD Final switching device	The component in the safety-related control system on the machine that interrupts the circuit to the Machine Primary Control Element (MPCE) if the switching output (OSSD) changes to the off state.
Functional safety	Part of the overall safety of the machine and the machine control system that depends on the correct function of the → SRECS, on safety-related systems in other technologies and on external features for risk reduction.
G	
Guards	A fundamental differentiation is made between “fixed” and “movable” guards. <ul style="list-style-type: none"> ▪ Fixed guards are used for hazardous points where it is unnecessary, or only seldom necessary, to make changes. As a rule, they are fixed in place and can only be removed with tools. ▪ Movable guards are used if it is necessary to make changes at the hazardous point to operate the machine, to rectify malfunctions or during setup. These guards are monitored using → Safety switches.
H	
Hazardous area	A hazardous area is any area in a machine and/or around a machine in which a person can be subjected to a hazard (<i>ISO 12100-1/EN ISO 12100-1</i>).
I	
Interface	Connection point between two devices or systems. The devices/systems on each side of an interface are connected together using an interface cable via which data, addresses, and control signals are exchanged. In this context, the term interface covers the entirety of the functional, electrical and design conditions (coding, signal level, pin assignments) that characterize the connection point between the devices or systems.
Interlocking	An interlocking device is a mechanical, electrical or other device that prevents a machine from operating element under certain circumstances.
IP	→ Enclosure ratings
ISO International Organization for Standardization	Worldwide federation of national standards institutes in 148 countries. The term ISO is not an acronym for the name of the organisation, but comes from the first three letters of the Greek word “isos”, which roughly means “equal”. → www.iso.ch
L	
Laser Light amplification by stimulated emission of radiation	Amplifier for electromagnetic waves in the visible light spectrum
Laser protection class	Categorization of laser equipment into classes. In the classes 1 to 4, limits are set for photochemical hazards for the accessible radiation.
LED Light emitting diode	Light emitting diode (luminescence diode)
Light curtain	An AOPD with a resolution ≤ 116 mm
Light spot	Light spot dimension, determining the sensor’s resolution.
Locking force	Maximum force with which a guard can be safely locked.

Abbreviation/term	Explanation
M	
Machinery Directive	<p>The Machinery Directive 2006/42/EC is intended for manufacturers of machines and safety components, and organizations placing machines and safety components on the market. It defines tasks for meeting the health and safety requirements for new machines, with the intention of removing trade barriers within Europe and guaranteeing users and operators a high level of safety and health protection.</p> <p>It is applicable to the production of machinery as well as to safety components placed on the market individually, and is also applicable to second-hand machinery and devices from other countries that are to be placed on the market in the EU for the first time (e.g., from the USA or Japan).</p> <p>From 29.12.2009, only the Machinery Directive 2006/42/EC is to be applied!</p>
Master	Central bus user that controls bus access. All other bus users work as slaves.
Master/slave principle	The master element defines the instructions, slave elements follow the instructions from the master. For example, with decentralized bus controls an automation device, as the master element, assigns the access rights for the other components (slave elements).
Mechanical unlocking mechanism	Is used to unlock a safety switch from the outside.
Minimum distance	Calculated distance between the safeguard and the hazardous area necessary to prevent a person or part of a person reaching the hazardous area before the termination of the dangerous machine function.
Minimum shutdown time	Minimum time necessary to detect an infringement of the protective field on the input circuit on the relay. At values below this minimum figure, an incorrect situation will not be detected, or the relay will switch to the error state.
Minimum switch-on time	Minimum time that a signal must be present on the input circuit before a reset can be performed (change from LOW to HIGH).
Monitoring function for downstream devices	<p>The external monitoring device (→ EDM) must provide the necessary means for the connection to the signals from the external devices (e.g., MPCE(s), FSD(s), muting devices) so that the EDM can unambiguously monitor the status of such devices.</p> <p>The safety device must change to a locked state if an incorrect state is detected in one of the devices to be monitored by the EDM.</p>
MPCE Machine primary control element	Element in the main circuit: The element that interrupts the main circuit to stop the machine (<i>IEC 61496-1/EN 61496-1</i>).
Muting	Temporary automatic suspension of one or more safety functions by safety-related parts of the control system (<i>IEC 61496-1/EN 61496-1</i>).
Muting of an AOPD	<p>Temporary automatic suspension of the safety function of an AOPD for a safety-relevant time. For example, the standard EN 415-4 (1997) for packaging machines addresses the problem of palletizers and de-palletizers (machines in which all work on the pallet load is performed automatically and only by the machine). At the entry and exit to the chamber (where under normal operating conditions there is a hazard), it is necessary to bridge the AOPD when the pallet moves past. However, it is also necessary to detect the entry of people. The muting system must be able to differentiate between the pallet and the operator.</p> <p>The muting conditions that are defined in the standard EN 415-4 state that:</p> <ul style="list-style-type: none"> ▪ Muting is only allowed to be activated during the period of time in the working cycle when the loaded pallet blocks access to the hazardous area. ▪ Muting should be automatic. ▪ Muting must not be dependent on a single electrical signal. ▪ Muting must not be entirely dependent on software signals. ▪ Muting signals occurring during an invalid combination must not permit any muting state, and it must be ensured that the protective function is retained or leads to a machine stop. ▪ The muting state is lifted immediately after the pallet has passed through and the protective device is reactivated.

Abbreviation/term		Explanation
Muting-dependent manual bridging		An optional function on an ESPE, also called override. This function permits activation of the muting function, and thus the bridging of the ESPE, by the manual operation of a control switch for the purpose of, e.g., clearing blockages in the muting area on a roller conveyor. The override function must only be able to be activated when at least one muting sensor is active. The manually initiated override is deactivated automatically after either a correct muting sequence or a pre-set time (<i>IEC 61496-1/EN 61496-1</i>).
N		
NC		Normally Closed NC contact
NO		Normally Open NO contact
Number of beams		Number of beams of a multiple light beam safety device
Number of protective fields		Number of switchable protective fields of an → AOPDDR
O		
Operating voltage, max.		The maximum operating voltage is the upper limit for the voltage used to supply the equipment with power for operation. The specified maximum operating voltage must not be exceeded, especially not by the maximum peaks on any residual ripple.
Operating voltage, min.		The minimum operating voltage is the lower limit for the voltage used to supply the equipment with power for operation so that the equipment continues to function. The voltage must not drop below the specified minimum operating voltage, especially not by the minimum peaks on any residual ripple.
OSHA	Occupational Safety & Health Administration	Authority for health and work safety. Responsible for work safety regulations in the USA. OSHA has the task, by means of the preparation and implementation of directives, to safeguard the health and safety of the American worker, to provide means for training, and to promote the continuous improvement of health and work safety. → www.osha.gov
OSSD	Output signal switching device	The part of the electro-sensitive protective equipment (ESPE) that is connected to the machine control, and that changes to the off state when the sensor section is triggered during correct operation.
Output current, max.		Maximum permissible load current on the output
Output current, min.		Minimum load current necessary on the output
Output signal switching device		→ OSSD
Output switching element OSSD		→ OSSD
Outputs, safe		→ OSSD
Override		→ Muting-dependent manual bridging
P		
PDF		Proximity Device with defined behavior under fault conditions
PDF category		Describes the behavior of a proximity device under fault conditions.
PELV	Protective extra low voltage	Protective extra low voltage with safe isolation (<i>IEC 60364-4-41</i>). The protective measure PELV differs from → SELV (safety extra low voltage) only in the type of ground connectio. A PELV circuit is present if, for example, the secondary side is grounded for operational reasons. The nominal voltage shall not exceed 25 V AC or 60 V DC when the equipment is normally used in dry locations and when large area contact of live parts with the human body is not expected; or 12 V AC or 30 V DC in all other cases. For further requirements see <i>IEC 60204:2007 Subclause 6.4</i> .
PFHd	Probability of dangerous failure per hour	Mean probability of a dangerous failure per hour (1/h).

Abbreviation/term	Explanation
PL Performance level	Discrete level used to specify the ability of safety-related parts of control systems to perform a safety function under foreseeable conditions (<i>ISO 13849-1/EN ISO 13849-1</i>).
Positive opening	Positive opening on switches signifies that there must be positive, shape-based transmission of force between actuator and switching element. The actuating mechanism must be designed so that even on mechanical failure, e.g., on the fracture of a spring or contact welding, the contacts open reliably and remain open in the actuated state (<i>IEC 60947-5-1/EN 60947-5-1</i>).
Power-up delay	Time that the safety module requires to become ready for operation after application of the supply voltage.
Presence detection	Secondary protective device for machinery/systems that can be accessed from the floor and on which the system must be prevented from starting while the operator is in the interior (safety function: preventing start).
PROFIBUS PROFIBUS-DP	PROFIBUS (Process Field Bus) is the universal field bus, often used in production, process and building automation. PROFIBUS was developed by Siemens and the PROFIBUS user group and standardized according to IEC 61158. PROFIBUS enables communication between devices of different manufacturers without special interface adaptations. → www.profibus.com
PROFIsafe	Profile for safety-related data transmission via the PROFIBUS network.
Protective field	The area in which the test object specified by the manufacturer is detected by the item of electro-sensitive protective equipment (ESPE). <ul style="list-style-type: none"> ▪ Safety light curtain: The protective field lies between the sender unit and receiver unit. The field is defined by the protective field height and the protective field width. ▪ Safety laser scanner: The protective field secures the hazardous area on a machine or vehicle. The field is defined by the scanning range, scanning angle, response time and resolution of the device (see technical specifications).
Protective field height for safety light curtains	Height of the active protective field along the longitudinal axis of the light curtain.
Protective field range	→ Scanning range
Protective field width for safety light curtains	This is given by the length of the light path between sender and receiver. To guarantee the safe protective function, the maximum permissible protective field width must not be exceeded.
PSDI control	An optional function on an item of ESPE with which the ESPE triggers the dangerous machine movement as well as its protective function. The following types of actuation are common: <ul style="list-style-type: none"> ▪ In the single break PSDI mode, the machine movement is started by interrupting and clearing the protective device's protective field. ▪ In the double break PSDI mode, the machine movement is started by interrupting and clearing the protective device's protective field twice in succession.
PSDI mode	This term refers to manual intervention at hazardous points during the machine working cycle. Therefore, a high level of safety for monitoring the protective device and for signal processing must be achieved. If these conditions are met, the start command can be given if the protective device returns to the correct protective setting. See also → Single break/double break PSDI mode.
R	
Radiation source	Source for beam generation using, e.g., semiconductor LEDs or conventional gas discharge lamps.
Reduced resolution	An optional function on → ESPE (particularly light curtains) with which several objects up to a certain size, that occasionally cause interruptions, can be tolerated in the protective field without → OSSDs switching to the off state, provided a certain number of neighboring light beams remain clear.
Reflector distance, min.	Minimal permissible distance between photoelectric reflex switch and reflector.
RES Reset inhibit	→ Restart interlock
Reset/restart	→ Reset → Restart

Abbreviation/term	Explanation
Reset	Resetting the protective device to the monitored state. <ul style="list-style-type: none"> ▪ Manual reset is provided by a separate device and operated manually, e.g., using a reset button. ▪ Automatic reset by the protective device is only allowed in a special case: It shall not be possible for persons to be in the hazardous area without the protective device triggered or it shall be ensured there are no persons in the hazardous area during and after reset.
Reset time	Time between operating the reset (in the “safe” state) and the “enabled” state. The time starts: <ul style="list-style-type: none"> ▪ with manual reset on release of the reset button (except UE23-2 MF safety relay). ▪ with automatic reset upon closing the input circuits (e.g., closing the interlocked door).
Response delay time	Time by which the response of the contacts is delayed. The times can be adjusted on switching devices with response delay.
Response time	The maximum time between the occurrence of the event that caused the triggering of the sensor and the achievement of the off state at the output switching elements (OSSDs).
Restart	Placing the machine back in operation. After the triggering of the protective function or after a fault, the protective device can be reset to make it possible to subsequently restart the machine.
Restart interlock	Means of preventing automatic restarting of a machine after actuation of the sensing device during a hazardous part of the machine operating cycle, after a change in mode of operation of the machine, and after a change in the means of start control of the machine (<i>IEC 61496-1/EN 61496-1</i>). <ul style="list-style-type: none"> ▪ Operating modes include: <ul style="list-style-type: none"> inching, single stroke, automatic ▪ Start control equipment includes: <ul style="list-style-type: none"> foot switch, two-hand control, single break PSDI triggering or double break PSDI triggering by the ESPE’s sensor function ▪ Restart interlock (RES): <ul style="list-style-type: none"> The machine stops and the restart interlock (RES) is engaged upon interruption of at least one light beam. This interlock ensures that the machine can only be restarted if the light path is clear and the reset button has been pressed and released again.
Risk assessment	Risk assessment is the complete procedure of identifying hazards, estimating and evaluating the associated risks. The risk assessment supports the selection of appropriate measures and the evaluation of their effectiveness. The risk assessment is described in EN ISO 14121. While essential requirements are aimed to provide a high level of safety, the resources must nevertheless be proportional to the risk involved. <p>The protection of an operator who manually inserts and removes parts in a metal press must not be considered in the same way as the protection of an operator who works on a machine where the worst-case risk is the trapping of a finger.</p> <p>Furthermore, one and the same machine can have different access points with varying levels of risk. For this reason, different measures can be adopted for different parts of the safety-related control for a machine.</p> <p>Against this background, the standard <i>ISO 13849-1/EN ISO 13849-1</i> aids designers in the definition of the performance for the various parts of the safety-related control based on the following parameters:</p> <ul style="list-style-type: none"> ▪ The possible severity of injury ▪ The frequency and/or duration of exposure to the hazard ▪ The possibility of preventing the hazard
Risk estimation	Risk estimation is a part of the risk assessment. It is necessary to estimate the risk to determine the measures required to achieve the protection objectives and the resulting solutions. <p>The necessary safety solutions are defined taking into account the risk parameters and the severity of the hazard.</p>

Abbreviation/term	Explanation
S	
Safe outputs	→ OSSD
Safety command devices	These switches are manually operated control switches. There are command devices for emergency stop function (emergency stop pushbuttons). There are also enabling devices designed for the setup mode while working in the hazardous area of machines and systems. In the "manual operating mode" the protective action of movable guards is disabled under certain conditions. Authorized personnel enter hazardous areas with the safety command device to carry out programming, setup, observation, repair, test or service work.
Safety function	Function of a machine whose failure can result in an immediate increase of the risk(s) (<i>EN ISO 12100-1</i>). A safety function is provided by safety-related parts of control systems (SRP/CS).
Safety sub-function	The part of a safety function that is provided by a safety-related sub-system (e.g., actuator) for risk reduction.
Safety switches	Safety switches are items of safety equipment for monitoring movable guards. On opening, they must safely open the circuit and keep it open until the guard is closed again. Safety switches with solenoid locks are locking devices that, in conjunction with the control, forcibly keep movable guards in the protective position until the dangerous states are brought to an end.
Safety switches category 1	Safety switches on which switching element and actuating element form a single unit.
Safety switches category 2	Safety switches on which switching element and actuating element do not form a single design unit, though on operation they are moved together or separated by the function.
Scanning range	The scanning range is the maximum possible distance (specified detection distance) between sender and receiver (through-beam photoelectric switch) or between sensor and reflector (photoelectric reflex switch) or the maximum range of the field of view (laser scanners) at which stable function can be guaranteed.
SDL Safety data link	SICK safety interface (connection for → OSSDs and → EFI)
Selection of several protective fields	An → AOPDDR can have several switchable protective fields.
Self-monitoring	Self-monitoring ensures that safety functions implemented by protective measures are also executed if the functionality of a component or element is reduced, or the process conditions have changed such that there are hazards. Self-monitoring detects a fault either immediately or performs periodic checks so that the fault is detected before the safety function is called up again. In both cases, the protective measure can be triggered immediately or delayed until a specific event occurs. (e.g., the start of a working cycle on the machine). (<i>ISO 12100-1/EN ISO 12100-1</i>)
SELV Separated or safety extra low voltage	A SELV system is an electrical system in which the voltage cannot exceed ELV under normal conditions, and under single-fault conditions, including ground faults in other circuits (<i>IEC 61140</i>). A SELV circuit must provide: <ul style="list-style-type: none"> ▪ protective-separation (called double insulation, reinforced insulation or protective screening) from all circuits other than SELV or PELV that might carry higher voltages) or ▪ simple separation from other SELV systems, from PELV systems and from earth. The protective measure SELV differs from → PELV (Protective Extra Low Voltage). SELV circuits shall not be grounded on the secondary side or connected to other voltage systems. The maximum permissible nominal voltage for the protective measures SELV is 50 V AC and 120 V DC.
Sensor detection capability (resolution)	The limit for the sensor parameter, defined by the manufacturer, that causes the item of electro-sensitive protective equipment (→ ESPE) to trigger.
SIL Safety integrity level	Discrete level (one out of a possible three) for specifying the safety integrity requirements of the safety-related control functions to be allocated to the → SRECS. Safety integrity level three has the highest level of safety integrity and safety integrity level one has the lowest (<i>IEC 62061/EN 62061</i>).

Abbreviation/term	Explanation
SILCL SIL claim limit	Safety integrity level claim limit (for a subsystem): Maximum SIL that can be claimed for a → SRECS subsystem in relation to architectural constraints and systematic safety integrity (IEC 62061/EN 62061).
Single break/double break PSDI mode	<p>This operating mode is advantageous if parts must be manually inserted or removed periodically. In this mode, the machine cycle is automatically re-initiated after the protective field becomes clear again after one or two interruptions.</p> <p>The reset device is to be operated under the following conditions:</p> <ul style="list-style-type: none"> ▪ on machine start ▪ on restart if the → AOPD is interrupted during a dangerous movement ▪ to initiate a restart after a period of more than 30 s (cf. IEC 61496-1/EN 61496-1) <p>→ Further information EN 692</p> <p>Nevertheless, it is necessary to check that the operator cannot be placed at risk during the working process. This situation limits use to small machines on which the hazardous area cannot be entered and there is point-of-operation protection. All other sides of the machine must also be protected using suitable measures.</p> <p>If this operating mode is used, the resolution of the AOPD must be less than or equal to 30 mm (cf. ISO 13855, also EN 692, EN 693).</p> <p>In general, the following errors must be excluded when mounting protective devices: reaching over, reaching under, reaching around, standing behind.</p>
Slave	Participant in a network that can participate in the exchange of data only after contact from the master.
SRECS Safety-related electrical control system	Electrical control system for a machine in which the failure will result in an immediate increase in the risk or risks
Standard housing	Defines whether the housing for a position switch complies with DIN 43693.
Switching element function	Design of the switching element as normally closed contact, normally open contact, positive action normally closed contact or changeover contact.
Switching elements	<p>The switching elements on safety switches have actuating elements driven by a shaped fitting. The switching element related to the safety function must be positively driven or, in the case of spring-action switching elements, must guarantee safe opening of the normally closed contacts when the positive separation point is reached. A differentiation is made depending on the switching behavior:</p> <ul style="list-style-type: none"> ▪ Slow-action switching element that opens or closes depending on the speed of its actuation. ▪ Snap-action switching element that opens or closes independent of the speed of its actuation.
Switching frequency	Number of sensor switching operations in a defined time interval.
Switching principle of safety switches	<ul style="list-style-type: none"> ▪ Slow-action switch: has a switching element that opens and closes depending on the speed of its actuation. ▪ Snap-action switch: has a switching element that opens and closes independent of the speed of its actuation.
Switching voltage OSSD HIGH, max.	Maximum switching voltage of the OSSD in the status HIGH.
Switching voltage OSSD LOW, min.	Minimum switching voltage of the OSSD in the status LOW.
Switch-off delay	Time by which the shutdown of the output contacts is delayed. This time is either fixed or adjustable depending on the device type.
Synchronization time monitoring	The switching of the input circuits within a defined time is monitored (only on automatic reset/restart). Enabling takes place only if input circuit 2 closes at most 0.5 s <i>after</i> input circuit 1. If input circuit 2 closes <i>before</i> input circuit 1, the control is not active.

Abbreviation/term	Explanation
T	
T_{10d}	<p>Limit for the operating time of a component. Mean time until a dangerous failure has occurred on 10 % of the components</p> $T_{10d} = \frac{B_{10d}}{n_{op}}$ <p>The MTTFd determined for components subject to wear only applies for this time.</p>
Test rod	An opaque cylindrical element used to verify the detection capability of the active opto-electronic protective device (AOPD) (IEC/TS 61496-2, CLC/TS 61496-2)
Transmission medium	Medium via which the interface transmits the data.
Type of an ESPE	The types of an ESPE differ in their performance in the presence of faults and under influences from environmental conditions. It is the responsibility of the machine manufacturer and/or the user to determine which type is required for a particular application. (See IEC 61496-1)
Type of electrical connection	Mechanical design of the electrical connection on the item of equipment. Designed as plug-in connection, soldered connection, crimp connection, screw connection, spring-action terminal, wire-wrap connection, cable entry via gland or plug.
V	
Voltage type	Design of the sensor as DC, AC or AC/DC.
W	
Warning field output on safety laser scanners	The part of the electro-sensitive protective equipment (ESPE) that is connected to the machine control and that changes to the off state when the warning field for the sensor section is triggered during correct operation.
Warning field with safety laser scanners	The warning field can be placed in front of the protective field and thus in front of the actual hazardous area. Objects in the warning field trigger, e.g., a warning signal. The size and shape of the warning field can be configured with the aid of the → CDS.

Appendix – Sensor systems and safe control solutions from SICK

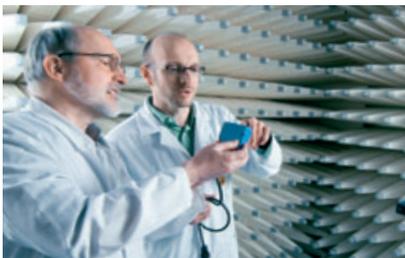

The following table gives an overview of the possible combinations between sensors and safe control solutions.

Combination:

- recommended
- ◐ possible
- on request
- not possible

SICK at a glance

Leading technologies

With a staff of more than 5,000 and over 50 subsidiaries and representations worldwide, SICK is one of the leading and most successful manufacturers of sensor technology. The power of innovation and solution competency have made SICK the global market leader. No matter what the project and industry may be, talking with an expert from SICK will provide you with an ideal basis for your plans – there is no need to settle for anything less than the best.

Unique product range

- Non-contact detecting, counting, classifying and positioning of any type of object
- Accident and operator protection with sensors, safety software and services
- Automatic identification with bar code and RFID readers
- Laser measurement technology for detecting the volume, position and contour of people and objects
- Complete system solutions for analysis and flow measurement of gases and liquids

Comprehensive services

- SICK LifeTime Services – for safety and productivity
- Application centers in Europe, Asia and North America for the development of system solutions under real-world conditions
- E-Business Partner Portal www.mysick.com – price and availability of products, requests for quotation and online orders

Worldwide presence with subsidiaries in the following countries:

Australia
Belgium/Luxembourg
Brasil
Česká Republika
China
Danmark
Deutschland
España
France
Great Britain
India
Israel
Italia

Japan
