

Dell PowerVault DL2200 & BE 2010 Power Suite

Owen Que

Channel Systems Consultant Dell

Customer Storage Challenge - Reduce Storage Costs

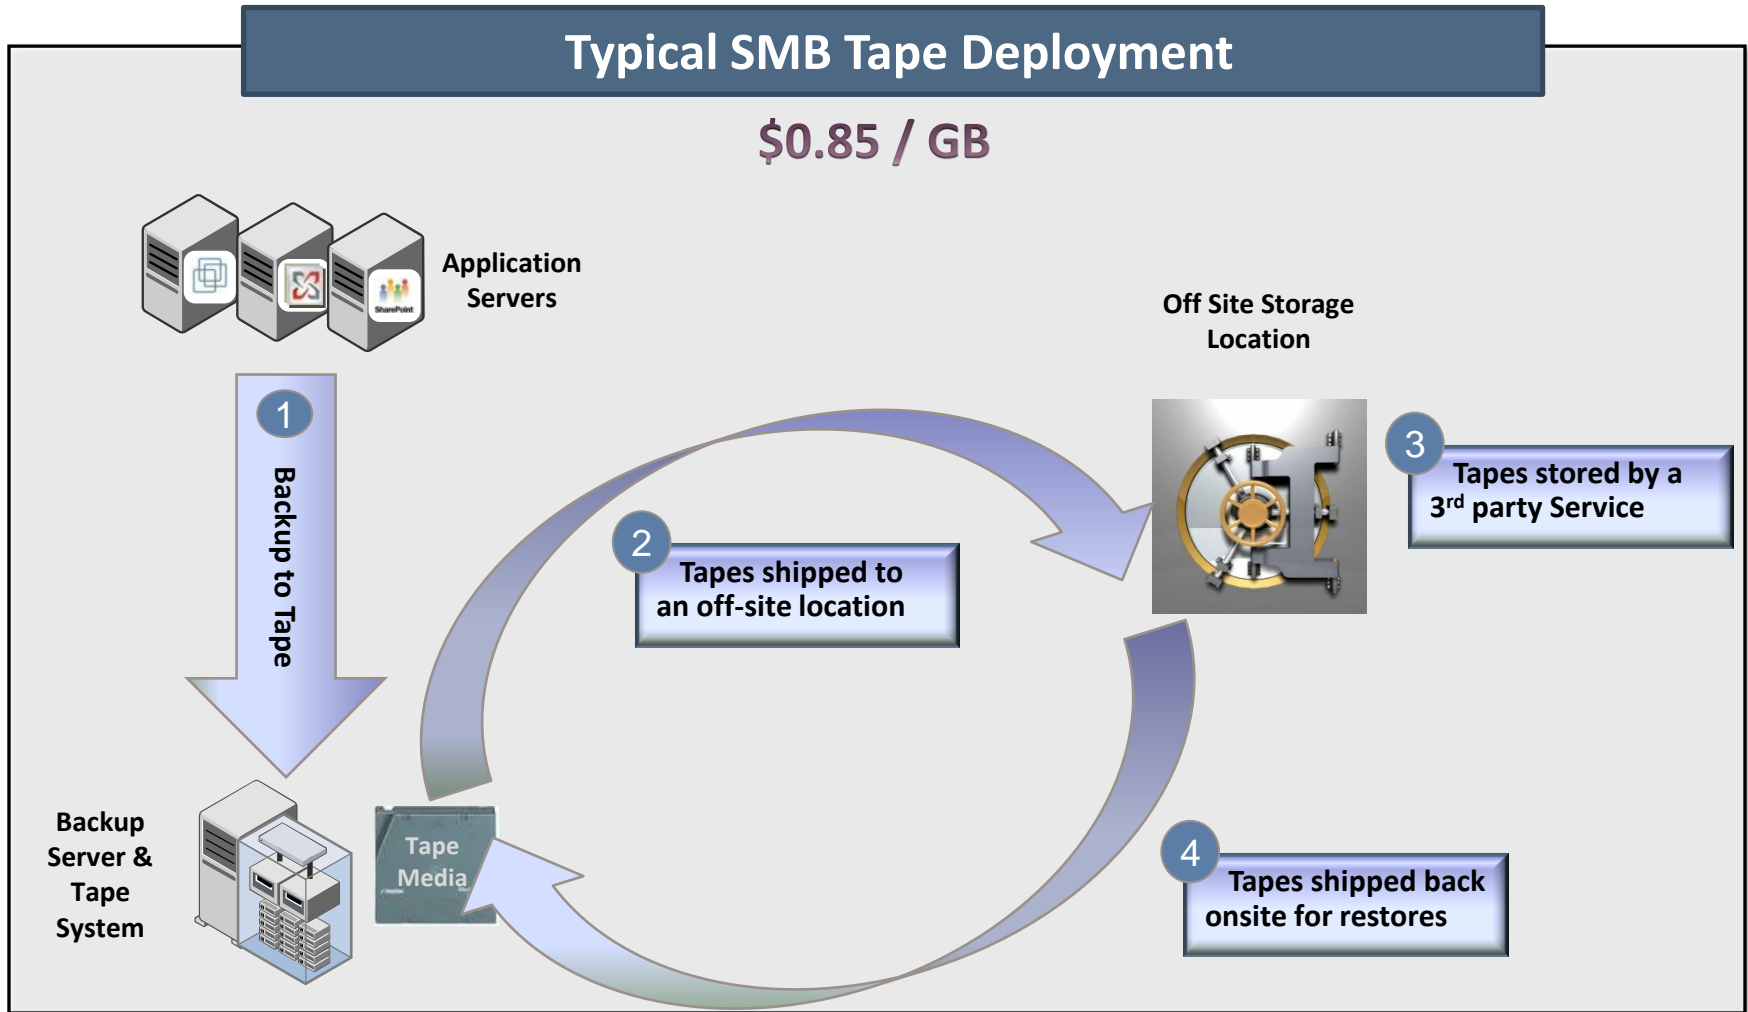

Your Customer's Storage Challenge

- Up to 70% of data is duplicate and hasn't been accessed in more than 90 days¹
- 57% of midsize organizations increase storage growth by 11-30% annually²
- Data lifecycle management is becoming more challenging

The DL2200 Opportunity:

- New Deduplication Option
- Improves Storage and Cost Savings
- Helps Reduce Backup Windows
- Adaptable To Any Customer's Environment

Customer Pain Points with Tape

Dell PowerVault DL2200

Powered by Symantec Backup Exec 2010 – integrated backup to disk solution

NEW PowerVault DL2200 powered by Symantec Backup Exec™ 2010

Replace Tape with Deduplication

50% less expensive than similar tape solutions through deduplication

Unified Archiving

Eliminate file system and exchange email data growth problem via automated policy

Protect Virtual Servers

Source deduplication ideal for virtual backups

Protect EqualLogic

#1 solution for backing up EQL

Native VSS Integration

Script-less integration

Deduplication Everywhere

Replace Tape Solution with Deduplication

Why dedupe?

- What are the benefits?
 1. Increase network bandwidth
 2. Free up valuable storage space
 3. Makes recovery easier
 4. Free up precious admin time to other more important tasks.
- What is the difference between file and block level?

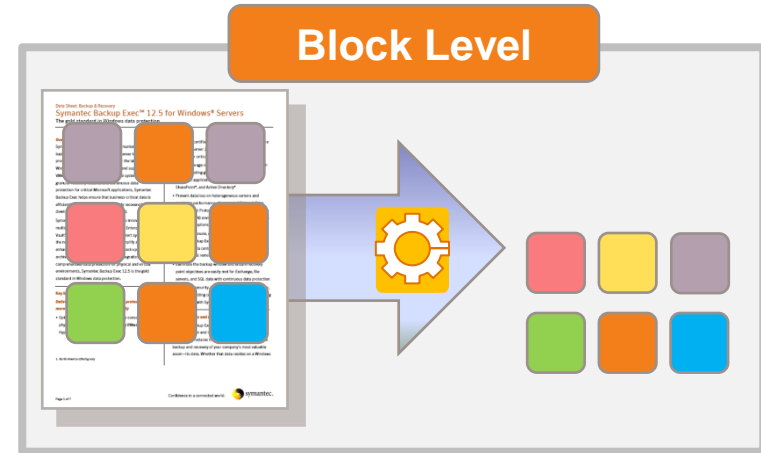

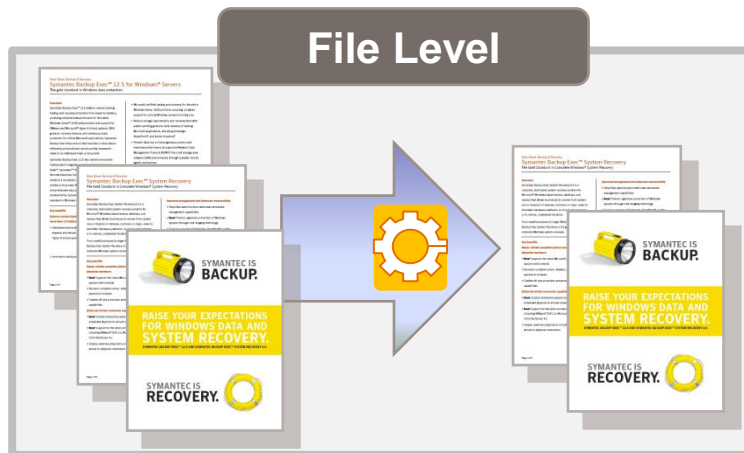

How Does it Work?

- Deduplication?

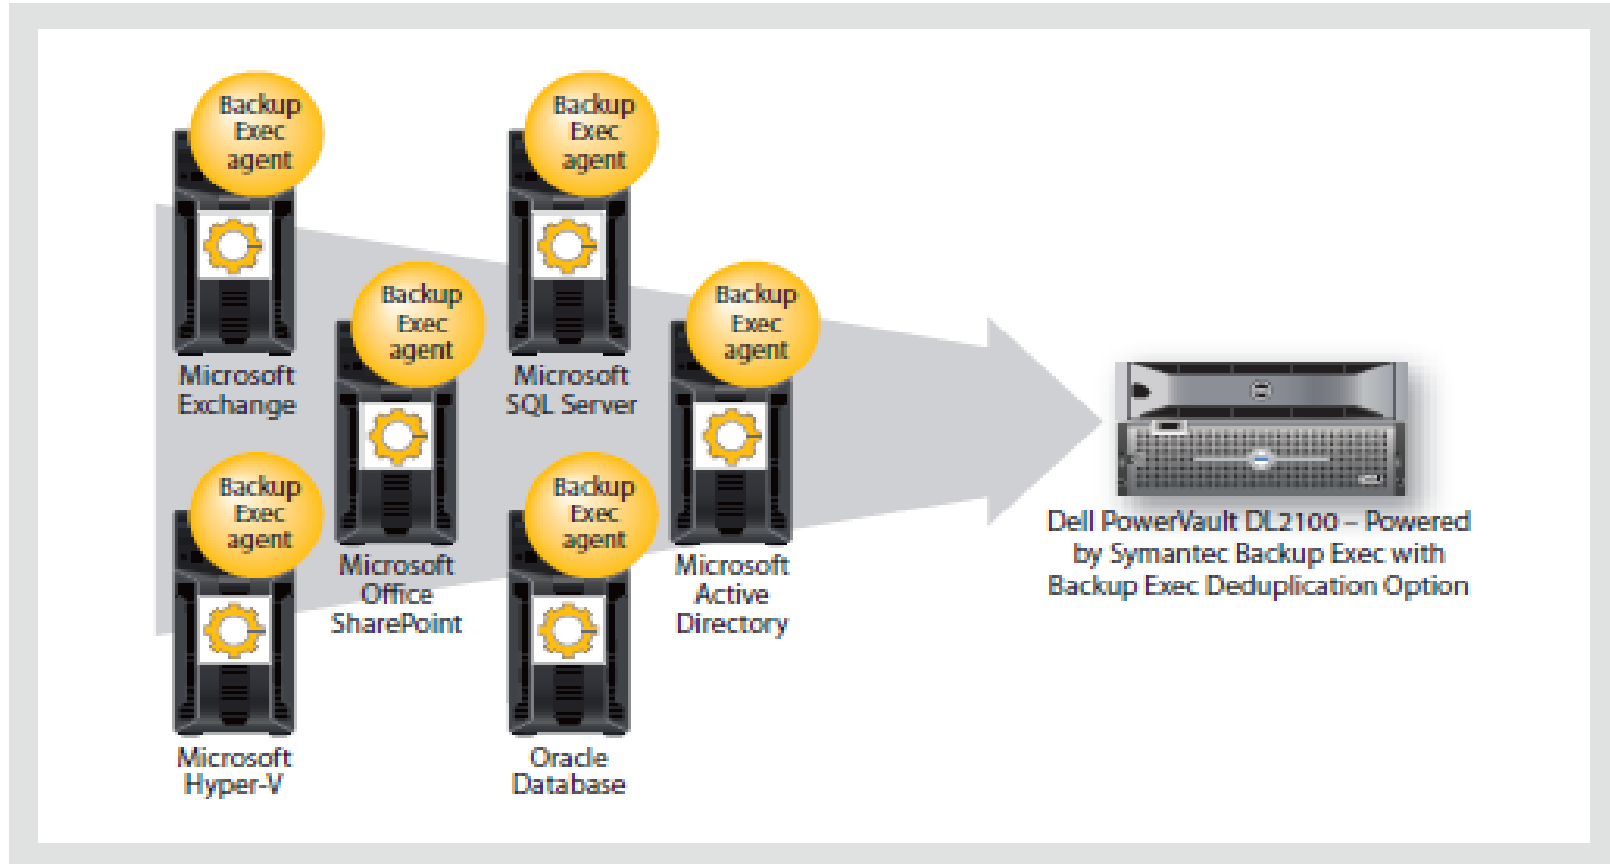

- What is the difference between file level and block level?

NEW Deduplication Option

Client Deduplication (Source Deduplication)

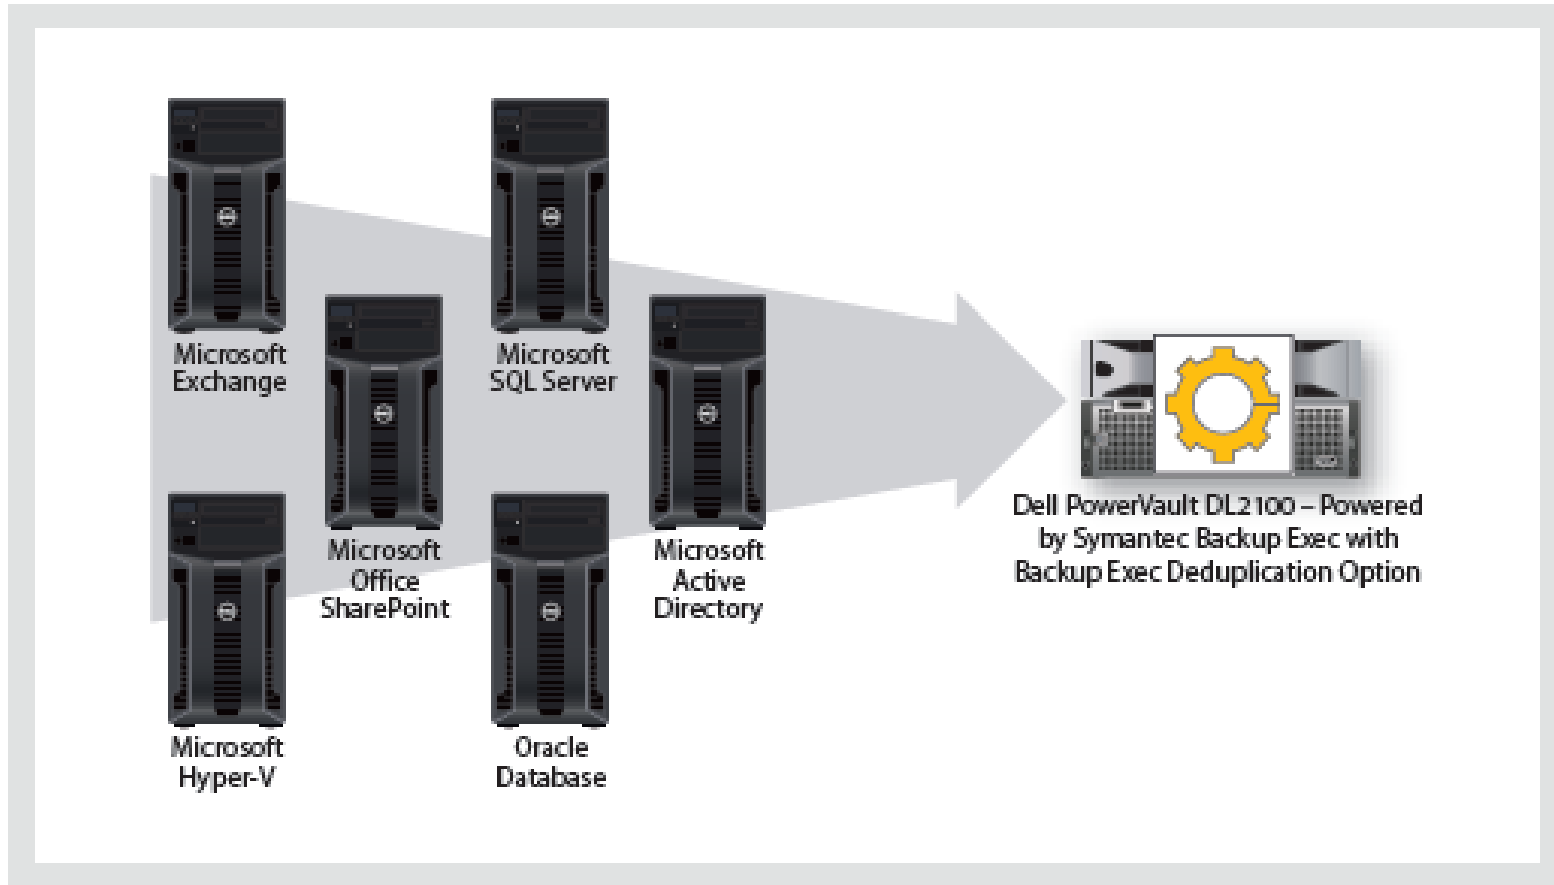

Client deduplication performed on the source servers is designed to reduce the amount of data sent over the network, helping optimize both bandwidth and storage usage

Note: Requires Deduplication Option on medias server and Remote Agent on each client/source

 Dedupe is performed

NEW Deduplication Option

Media Server Deduplication (Target Deduplication)

Media server deduplication performed on the Dell PowerVault DL2100 helps optimize storage while simplifying deployment in existing backup infrastructures

Note: Requires Deduplication Option on medias server and Remote Agent on each client/source

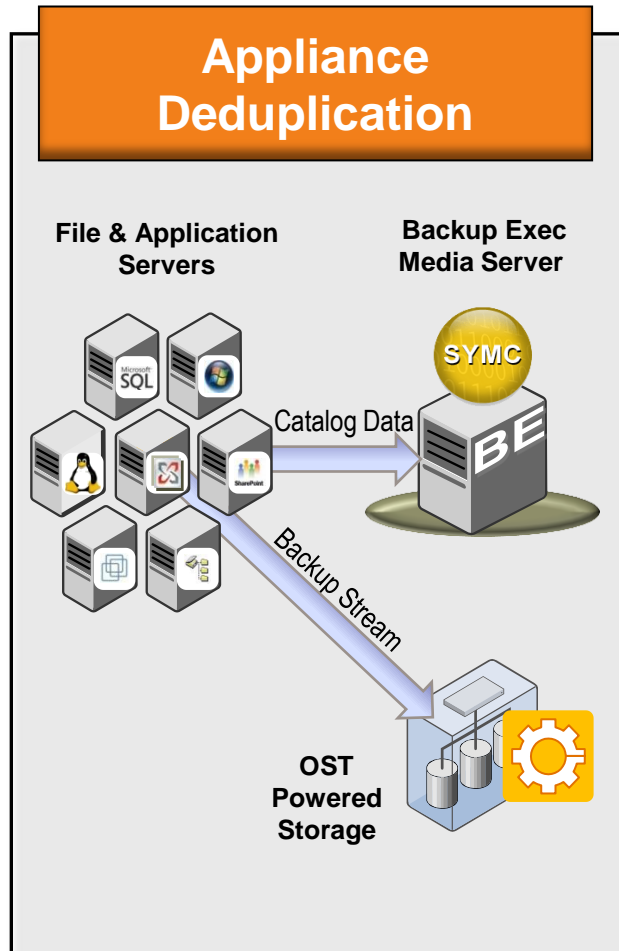

here
Dedupe is performed

NEW Deduplication Option

Appliance Deduplication

Indicates where
Dedupe is performed

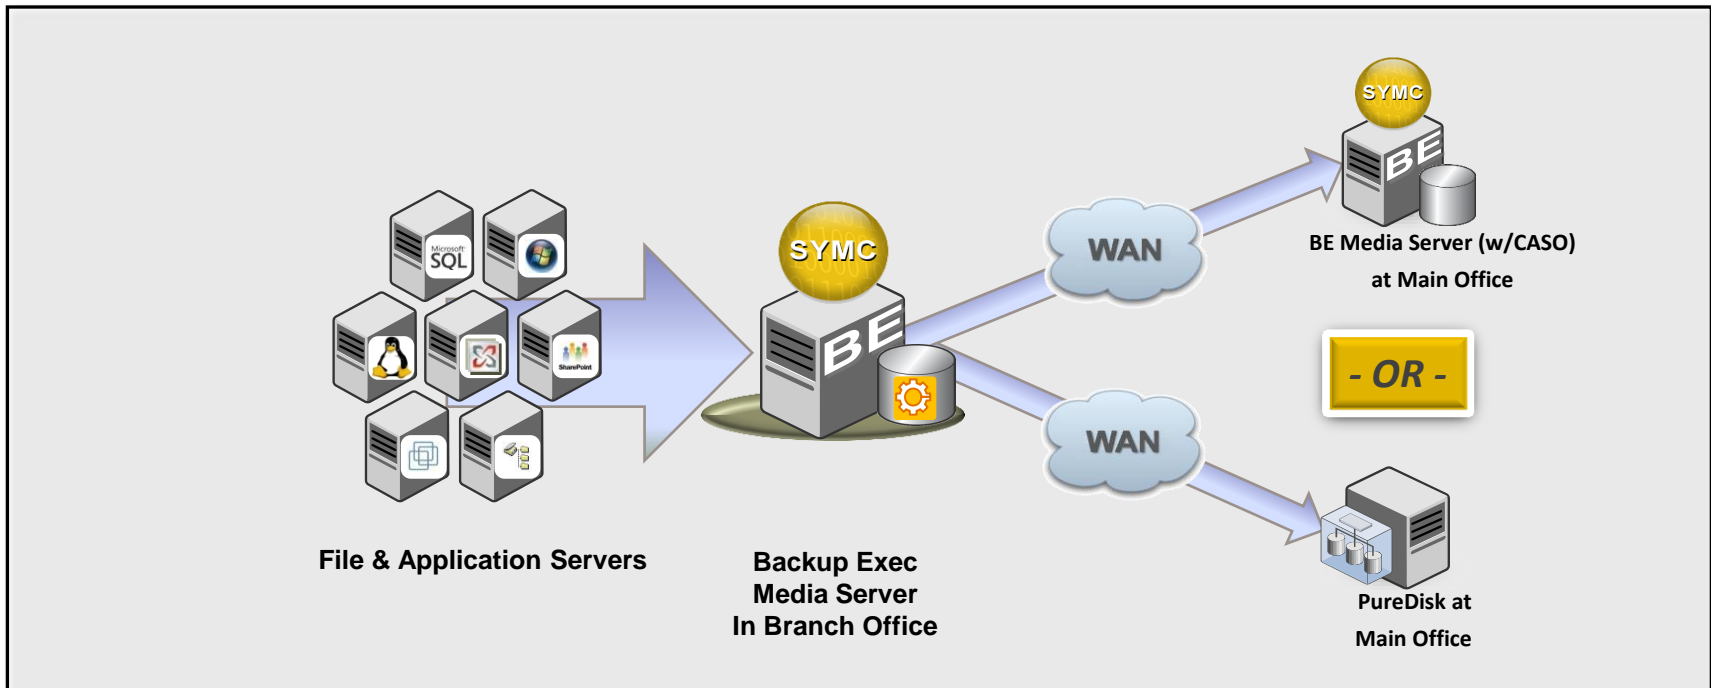

- Allows users to adopt 3rd party Open Storage (OST) deduplication disk devices
- Remotely controlling the data to be backup/restore using 3rd party Appliance Deduplication technology and report catalog data back to Backup Exec Media Server.
- Achieves faster backups to deduplication appliances via Symantec OST plug-ins enabled by Backup Exec 2010

NEW Deduplication Option

Deduplication Backup Set Copy - DR & remote Office

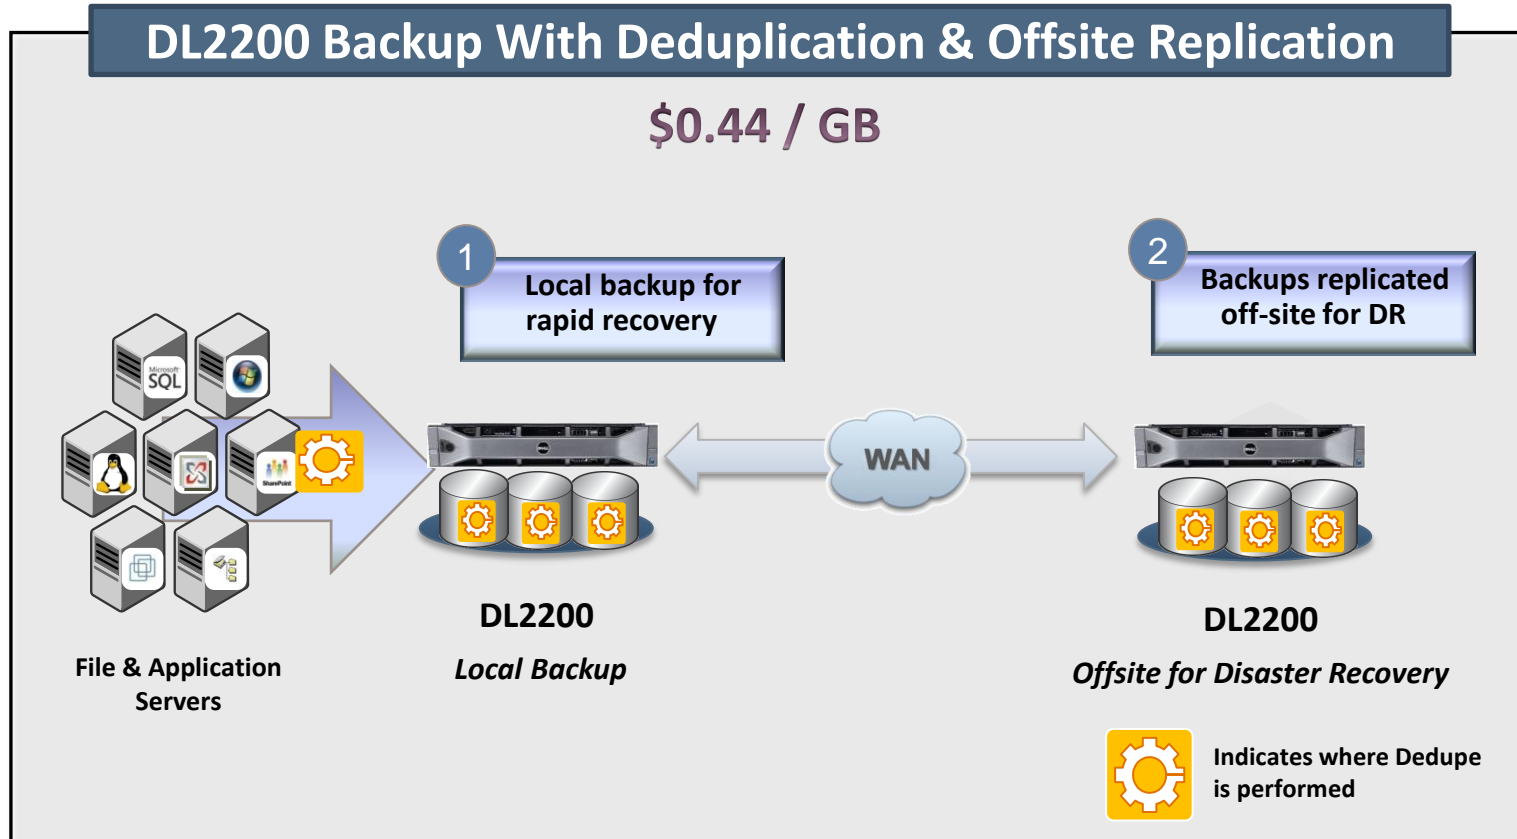

Indicates where
Dedupe is performed

Replace Tape with DL2200

Deduplication and offsite disaster recovery

Optimized Duplication: WAN-optimized backup (only new deduplicated blocks are transferred over the WAN to the remote site)

DL2200: Replace Tape in the SMB

SMB Use Case

Primary Storage Today	500 GB
Growth Rate	80%
Storage @ 2 Years	1,620 GB
Daily Change Rate	3%
Data Sets Stored	Weekly, Monthly, Yearly
Backup Storage Size	20,837 GB

DL2200: Replace Tape in the SMB

SMB Use Case	DL2200	LTO Tape
Solution Costs	\$15,000 (2 Systems)	\$12,400
Media Cost	NA	\$1,800
Off-site Storage Costs	NA	\$3,600
Storage ¹	33,750 GB (Deduplication)	6,400 GB (Compression)
Cost/GB	\$0.44	\$0.85

100110101010100010111011010101011100001101010101010100101010001010

1. Assumes 15:1 Deduplication Ratio and 2:1 Compression Ratio

Comparing Deduplication Solutions

	Symantec DL2200	Data Domain	EMC Avamar
Solution Costs	\$7,500	\$50,000	Expensive
Dedupe Methods	Source and Target	Target	Source
Cost to Scale	No Additional Costs	\$9,000 / TB	Expensive

Deduplication Business Use Cases

Remote Office Data Protection

- Save \$\$ on network bandwidth for backups
- Send less data across the network during backups

Virtual Machine Deduplication

- Resource optimized backup of VMware virtual machines
- Dedupe in the VM with Agent or at the BE Server without an Agent

Use Less Storage for Your Backups

- Use standard servers and disk, but stores more data more efficiently
- **Off-host dedupe**

No Storage Lock-In

- Freedom to use hardware deduplication appliances or software deduplication

Protect Virtual Servers

Virtual Machine Protection

Your Customer's Virtualization Challenges

- 46% of respondents surveyed run "Tier 1" applications on virtual machines¹
- 65% of SMB companies do not back up virtual server environments²
- Virtualization introduces new backup performance issues and recovery complexities
- Customers redesigning backup simultaneously

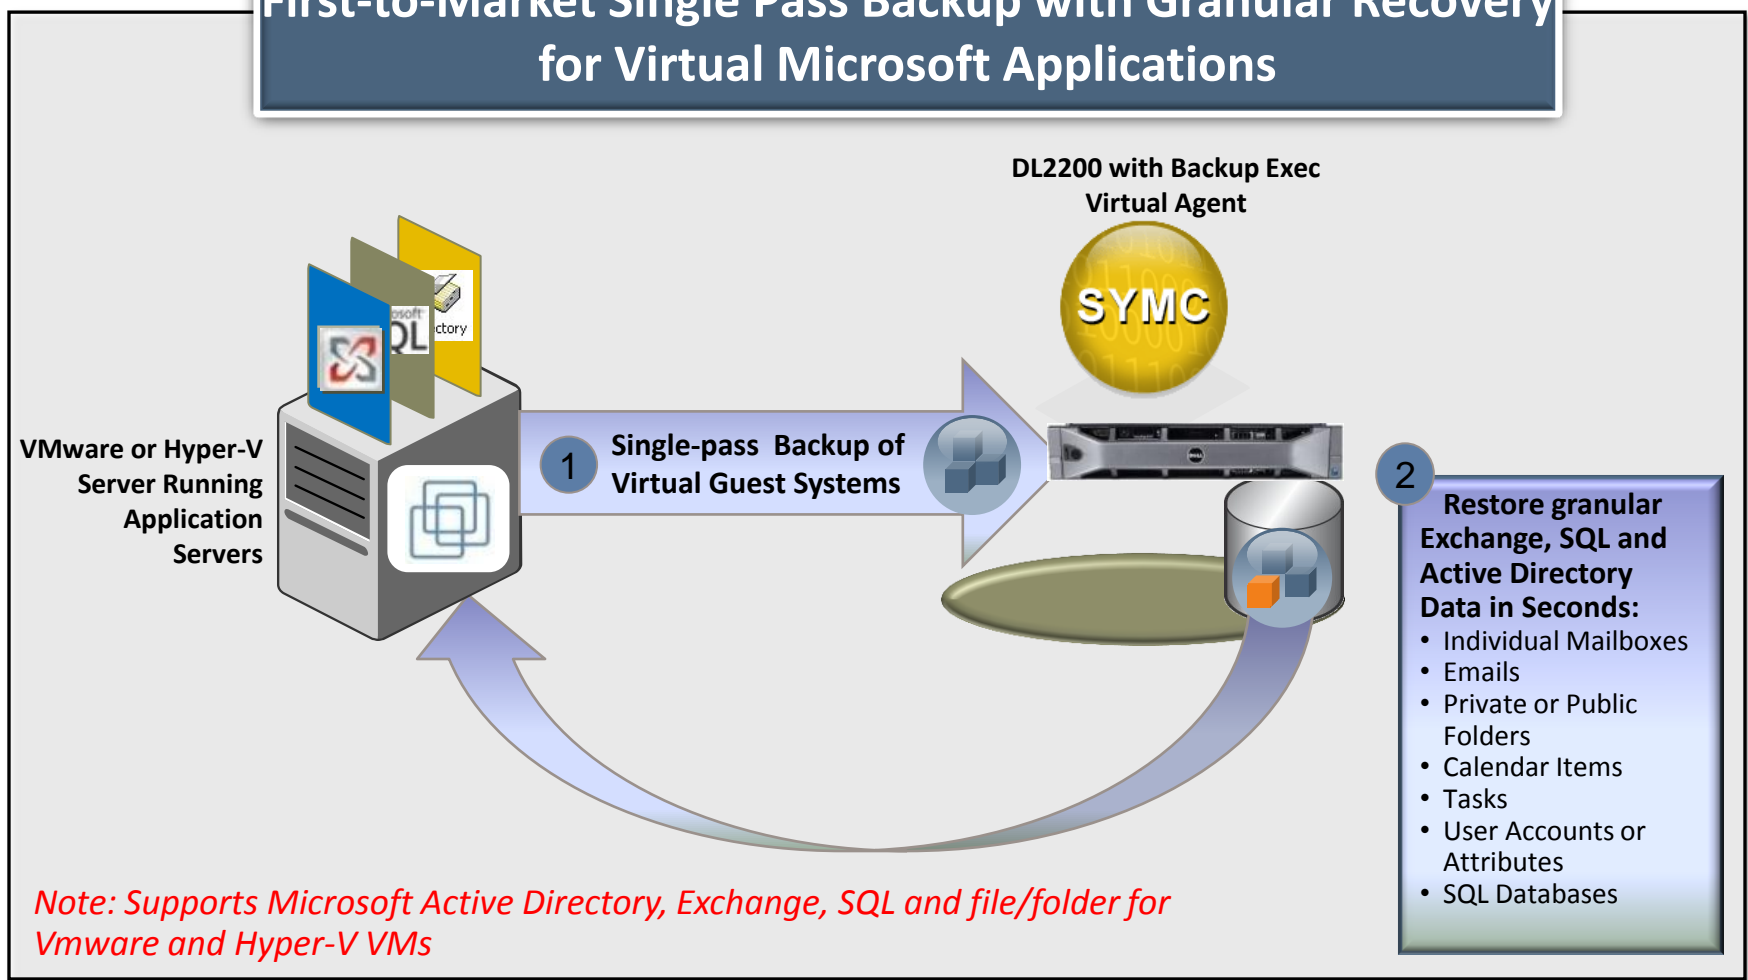

The DL2200 Value Proposition:

- **Save time** in designing virtualization backup – DL2200 is optimized and designed for VM protection
- **Reduce LAN backup traffic** from 100s of VMs using DL2200 source deduplication
- **Recover data better** in VMs – DL2200 simplifies individual file and e-mail recovery

Virtualize with Confidence

Protect, Optimize...

First-to-Market Single Pass Backup with Granular Recovery for Virtual Microsoft Applications

Virtualize with Confidence ... and Deduplicate

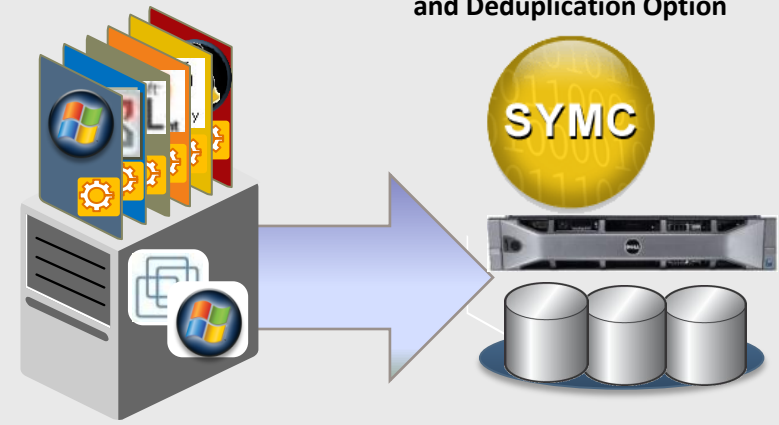

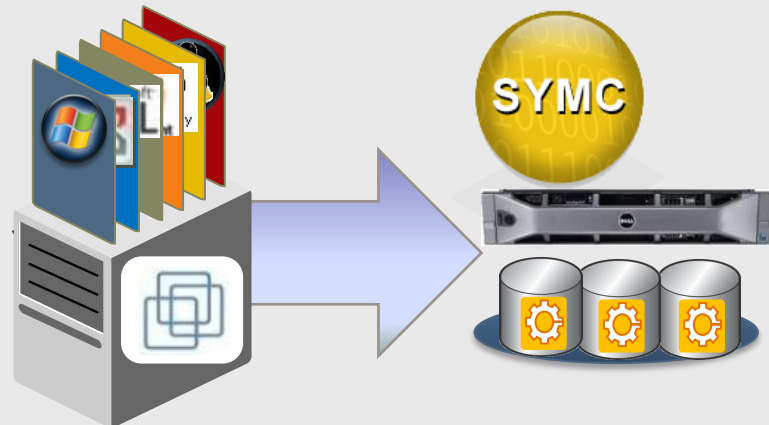

VMware Media Server Deduplication

Virtual Guest File &
Application Servers

Virtual Guest File &
Application Servers
with Individual
Windows Agents

Typically would be a SAN based backup

Typically would be a LAN based backup

NEW Virtualization Support

Physical and Virtual System Protection In One Console

Agent for VMware Virtual Infrastructure

- Support for VMware vSphere 4.0, vCenter 4.0 and vStorage
- Stage-less backup and restore (No VCB Proxy Server)
- vSphere block level Differential/Incremental backup
- Virtual Machine Template File Backups
- **Application Granular Recovery (Exchange, SQL, AD) from a single-pass backup**
- Dynamic inclusion of found virtual machines
- Redirected restore - Support for Folders and Resource pools

Agent for Microsoft Hyper-V

- Support for Windows Server 2008 R2 Hyper-V
- Support for Hyper-V LiveMigration/host clustering with Cluster Shared Volumes (CSV)
- Dynamic inclusion of found virtual machines
- **Application Granular Recovery (Exchange, SQL, AD) from a single-pass backup**

Unified Archiving – File System & Exchange

Business Case: Unified Archiving

Exchange and File Server Archiving Options

- Keep Exchange and File storage at predictable levels
- Reduce backup windows
- Provides migration of data to cheaper disk storage as it ages
- Improves recovery times
- One backup for disaster recovery and archive protection reduces I/O impact on Exchange and File servers
- Easily combine with client or media server Deduplication for added storage savings

NEW Backup Exec Archive Option for Exchange

- Full and Incremental/Differential Exchange Database Backups Are Performed Regularly
- Based Upon Archive Option criteria (age and/or size), Individual Emails Are “Harvested” from Backup and Migrated to Archive Option Vault
- Original Email Deleted From Exchange Server to Free Storage Space
- Emails in Vault Are Indexed
- Users Can Retrieve Individual Emails Using the Backup Exec Retrieve Google-like web UI

Introducing Backup Exec Retrieve

Search/Browse for archived files

View recently archived items

The screenshot shows the Symantec Backup Exec Retrieve 2010 web interface. The browser address bar shows the URL <http://10.217.19.33/backupexec/retrieve/>. The page title is "Symantec Backup Exec™ Retrieve 2010".

The interface features a navigation bar with the following buttons: Search Files, Browse Files, Search E-mail, Browse E-mail, and Recent Activity. The "Browse Files" button is highlighted with a red box. Below the navigation bar, there is a "Folders" section on the left and a "Retrieve File" section on the right. The "Retrieve File" section contains a table with the following data:

Name	Folder	Size	Modified
TCO.doc	\\Puma.BEAO2K3.dom\Share1\Folder 21\Folder 211\Folder 2111	4.3 MB	10/8/2004 9:49:30 PM
Word.doc	\\Puma.BEAO2K3.dom\Share1\Folder 21\Folder 211\Folder 2111	26.0 KB	12/19/2008 9:00:06 PM
Word97.doc	\\Puma.BEAO2K3.dom\Share1\Folder 21\Folder 211\Folder 2111	26.0 KB	12/19/2008 9:00:10 PM

The "Retrieve File" button is highlighted with a red box. A yellow callout points to the "Retrieve File" button with the text "Retrieve an archived item".

Protect EqualLogic using DL2200

Simplified EqualLogic Protection

Minimize Impact to Production Servers

Business Case: EqualLogic Integration

Advanced Disk-based Backup Option

- Centralize storage using cost effective iSCSI SANs
- Integration with EqualLogic APIs – no separate scripting or education is required. Simply select as part of a backup job.
- Backup directly from EqualLogic Snapshots to minimize the impact on production servers (off-host backups)
- Combine with deduplication to reduce the amount of data stored

Simplify

DL2200 powered by Symantec Backup Exec™ 2010: *Simplified Offering*

Symantec DL2200 Editions

Without Deduplication

- Media Server License
- Storage Provisioning Option Basic
- 2 x Agent for Windows Systems
- 1 Yr or 3 Yr Maintenance

With Deduplication

- Media Server License
- Storage Provisioning Option Basic
- Deduplication Option
- 2 x Agent for Windows Systems
- 1 Yr or 3 Yr Maintenance

DL2200 Add-on Packs

- External Storage Upgrade
 - Adds support for provisioning external disks in an MD1000 attached to the DL2200
- Agents and Options
 - Additional Backup Exec Agents and Options are licensed from the **BE 2010 Power Suites**.

DL2200 Server Only Configuration

2 Drive RAID 1
Backup Exec 2010
DL Management Software

RAID 5
Internal storage used
for backups

Storage Provisioning Option – Basic License configures internal storage only

DL2200 Server Only Configuration

Internal Storage

- Configurable up to 6 TB at Launch
- Deduplication Storage or B2D Storage
- Protection for up to 90 TB (15:1 dedupe)

DL2200 with Expansion

Add External Storage Upgrade SKU (Storage Provisioning Option) for MD1000 expansion
