#### Revision:

- PLFY-P12/15/18/24/30/36 NBMU-ER2 have been added in REVISED EDITION-B.
- Some descriptions have been modified.
- Please void OCH421 REVISED EDNTION-A.

#### Note:

- This manual does not cover outdoor units.
   When servicing them, please refer to the outdoor unit's service manual.
- RoHS compliant products have <G> mark on the spec name plate.

# Use the specified refrigerant only

#### Never use any refrigerant other than that specified.

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of. Correct refrigerant is specified in the manuals and on the spec labels provided with our products. We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

# 1 TECHNICAL CHANGES

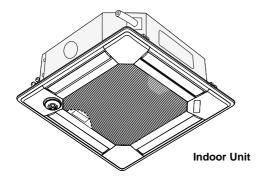

```
PLFY-P12NBMU-ER1 → PLFY-P12NBMU-ER2
PLFY-P15NBMU-ER1 → PLFY-P15NBMU-ER2
PLFY-P18NBMU-ER1 → PLFY-P18NBMU-ER2
PKFY-P24NBMU-ER1 → PLFY-P24NBMU-ER2
PKFY-P36NBMU-ER1 → PLFY-P36NBMU-ER2
PKFY-P36NBMU-ER1 → PLFY-P36NBMU-ER2
```

INDOOR CONTROLLER BOARD (I.B.) has been changed (S/W version up).

```
PLFY-P12NBMU-E → PLFY-P15NBMU-ER1
PLFY-P15NBMU-E → PLFY-P15NBMU-ER1
PKFY-P24NBMU-E
PKFY-P30NBMU-E
PKFY-P36NBMU-E
PKFY-P36NBMU-E
PKFY-P36NBMU-ER1
```

INDOOR CONTROLLER BOARD (I.B.) has been changed.

## **FEATURES**

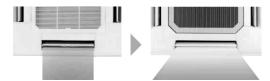

#### Models Cooling capacity / Heating capacity

PLFY-P12NBMU-E 12,000 / 13,500 Btu/h PLFY-P15NBMU-E 15,000 / 17,000 Btu/h PLFY-P24NBMU-E 24,000 / 27,000 Btu/h PLFY-P30NBMU-E 30,000 / 34,000 Btu/h PLFY-P36NBMU-E 36,000 / 40,000 Btu/h

#### 1. WIDE AIRFLOW

The new wide shape vane capable of wide angle air supply provides comfort even at the corners of a room regardless of cooling and heating operation. A reduction in the air speed by 20% compared to the conventional product eliminates uncomfortable draft sensation for friendly air conditioning.

#### 2. WAVE AIRFLOW SYSTEM (HEATING MODE)

The wave airflow system has 4 vanes where each vane runs independently. Repeating of horizontal and down blows with a time lag allows the conditioned warm air to be distributed even to room corners thus preventing uneven room temperature distribution.

Operation image of "Wave Airflow"

#### 3. AUTOMATIC AIR SPEED ADJUSTMENT MODE

The automatic air speed adjustment mode is provided in addition to the 4 air speed stages of "High/Medium 1/Medium 2/ Low." Air speed can be changed freely in accordance with a difference between the set temperature and the room temperature. The automatic air speed adjustment mode presents quick cooling of a room with the high mode, such as at the starting up of cooling operation, for example. After the room temperature is stabilized, the low mode will be applied by automatic switching to keep your comfort.

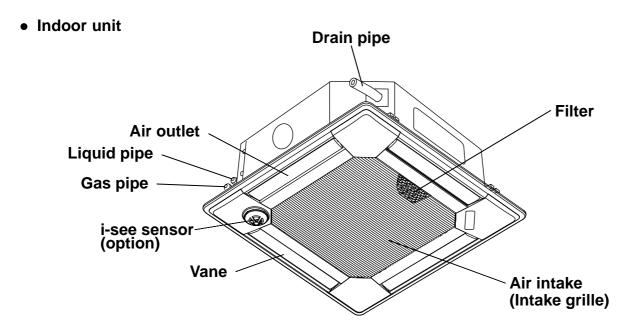

#### 4. i-see Sensor (OPTIONAL CORNER PANEL)

The i see sensor is a radiation temperature sensor originated from Mitsubishi's new technology. In order to create a really comfortable space in shops and offices, it is essential to control the temperature near the floor where occupants/visitors gather. The i see sensor measures the infrared rays generated from the surrounding wall and floor surface at an angle of 360° and the infrared ray energy is computed to convert it into the value of temperature. In addition, the floor temperature at distant spots (radiation temperature) is also measured to supply the optimum airflow to realize comfort which was never experienced in the past.

# 3

# PART NAMES AND FUNCTIONS

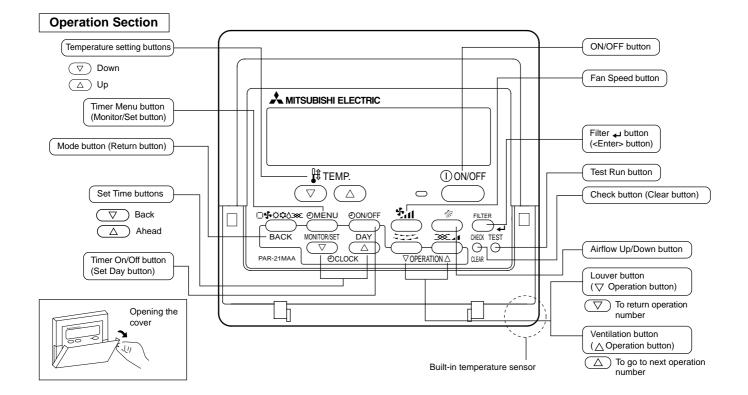

#### Wired remote controller

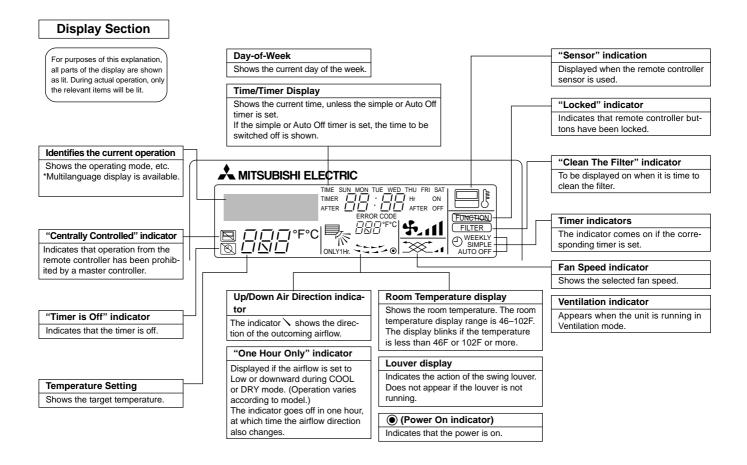

#### Note:

The phrase "Wired remote controller" in this manual refers only to the PAR-21MAA.

If you need any information for the other remote controller, please refer to either the installation manual or initial setting manual which are included in remote controller's box.

#### Wired remote controller

## 4-WAY AIR FLOW SYSTEM

#### 5-1. PLACEMENT OF THE AIR OUTLETS

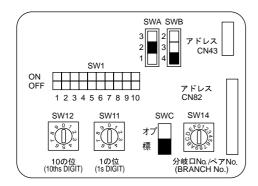

- For this grille, the blowout direction comes in 11 patterns.

  Also, by setting the remote controller to the appropriate settings, you can adjust the air flow and speed. Select the settings from Table1 according to the location in which you want to install the unit.
  - 1) Decide on the pattern of the airflow direction.

Note: For 3 and 2-direction settings, please use the air outlet shutter plate (option).

- 2) According to the number of air outlets and height of the ceiling to install the unit, be sure to set up the switches (SWA, SWB) on the address board to the appropriate setting.
  - Correspondence of ceiling heights to numbers of air outlets

#### 5-2. BRANCH DUCT HOLE AND FRESH AIR INTAKE HOLE

At the time of installation, use the duct holes (cut out) located at the positions shown in following diagram, as and when required.

• A fresh air intake hole for the optional multi function casement can also be made.

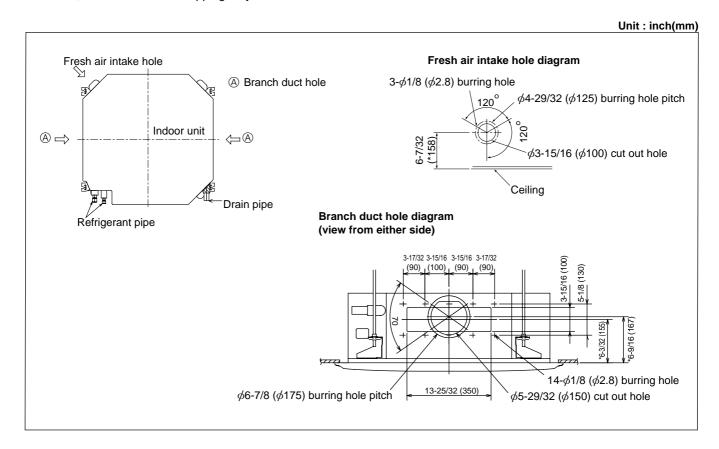

#### Note:

The figures marked with \* in the drawing below represent the dimensions of the main unit excluding those of the optional multi function casement.

When installing the optional multi function casement, add 5-5/16" (135 mm) to the dimensions marked on the figure.

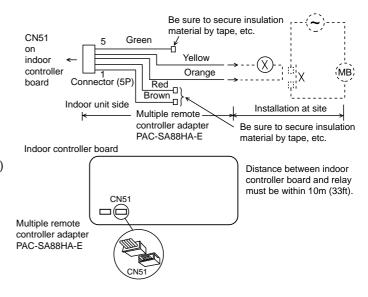

When installing the branch ducts, be sure to insulate adequately.

Otherwise, condensation and dripping may occur.

# 5-3. OPERATION IN CONJUNCTION WITH DUCT FAN (Booster fan)

- Whenever the indoor unit is operating, the duct fan also operates.
  - (1) Connect the optional multiple remote controller adapter (PAC-SA88HA-E) to the connector CN51 on the indoor controller board.
- (2) Drive the relay after connecting the 12V DC relay between the Yellow and Orange connector lines.
- MB: Electromagnetic switch power relay for duct fan.
  - X: Auxiliary relay (For DC 12V, coil rating: 1.0W or smaller)

#### NOTES:

- 1.At servicing for outdoor unit, always follow the wiring diagram of outdoor unit.
- 2.In case of using MA-Remote controller, please connect to TB15. (Remote controller wire is non-polar.)
- 3.In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
- 4.Symbol [S] of TB5 is the shield wire connection.
- 6. The setting of the SW2 dip switches differs in the capacity. For the detail, refer to fig. <\*1>.
- \*2.Use copper supply wires.

# INDOOR UNIT CONTROL 9-1. COOL OPERATION

#### <How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display COOL.
- ③ Press the TEMP. button to set the desired temperature.
  NOTE: The set temperature changes 2°F when the ♥ or △ button is pressed one time. Cooling 67 to 87°F

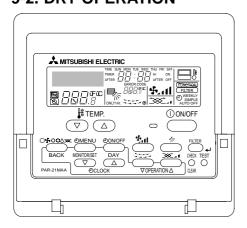

Control modes	Control details	Remarks			
1. Thermostat	1-1. Thermostat function (Function to prevent restarting for 3 minutes)				
function	<ul> <li>Room temperature   desired temperature + 2°F ···Thermo ON</li> </ul>				
	• Room temperature ≦ desired temperature ···Thermo OFF				
	1-2. Anti-freezing control				
	Detected condition: When the liquid pipe temp. (TH22) is 32°F or less in 16				
	minutes from compressors start up, anti-freezing control starts and the thermo OFF.				
	Released condition: The timer which prevents reactivating is set for 3 minutes,				
	and anti-freezing control is cancelled when any one of the following conditions is satisfied.				
	① Liquid pipe temp. (TH22) turns 50°F or above.				
	② The condition of the thermo OFF has become complete				
	by thermostat, etc.				
	③ The operation modes became mode other than COOL.				
	④ The operation stopped.				
2. Fan	By the remote controller setting (switch of 4 speeds+Auto)				
	Type Fan speed notch				
	4 speeds + Auto type [Low], [Med2], [Med1], [High], [Auto]				
	When [Auto] is set, fan speed is changed depending on the value of:				
	Room temperature - Desired temperature				

To be continued on the next page.

# From the preceding page.

Control modes	Control details	Remarks			
3. Drain pump	3-1. Drain pump control  •Always drain pump ON during the COOL and DRY mode operation.  (Regardless of the thermo ON/OFF)  •When the operation mode has changed from the COOL or DRY to the others (including Stop), OFF the control after the drain pump ON for 3 minutes.				
Float switch control  • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF.  In the water: Detected that the float switch is ON for 15 seconds.  In the air : Detected that the float switch is OFF for 15 seconds.  Float SW  ON  OFF  15sec. 15sec. 1min.30sec.					
4. Vane (up/down vane change)	(-)				
	(3) Restriction of the downward vane setting When setting the downward vane A, B, C or D in [Med1], [Med2] or [Low] of the fan speed notch, the vane changes to horizontal position after 1 hour have passed.				

#### 9-2. DRY OPERATION

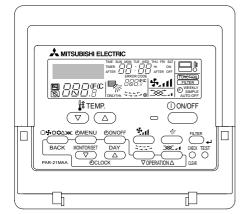

#### <How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display DRY.
- ③ Press the TEMP. button to set the desired temperature.

**NOTE**: The set temperature changes 2°F when the ♥or △ button is pressed one time. Dry 67 to 87°F

Control modes		Remarks				
1. Thermostat function	1-1. Thermostat function (Function to prevent restarting for 3 minutes)  Setting the Dry thermo by the thermostat signal and the room temperature (TH21).  Dry thermo ON Room temperature ≧ desired temperature + 2°F  Dry thermo OFF Room temperature ≦ desired temperature

4. Vane (up/down vane change)	Same control as COOL operation					

#### 9-3. FAN OPERATION

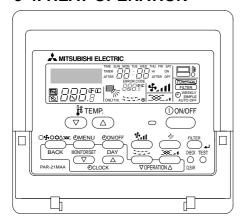

#### <How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display FAN.

Control modes	Control details	Remarks
1. Fan	Set by remote controller.	
	Type Fan speed notch	
	4 speeds + Auto type [Low], [Med2], [Med1], [High], [Auto]	
	When [Auto] is set, fan speed becomes [Low].	
2. Drain pump	<ul> <li>2-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met: <ul> <li>ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN).</li> <li>ON for 6 minutes after the float switch is submerged in the water when the float swich control judges the sensor is in the water.</li> </ul> </li> </ul>	
	Same control as COOL operation	
3. Vane (up/down vane change)	Same as the control performed during the COOL operation, but with no restriction on the vane's downward blow setting	

#### 9-4. HEAT OPERATION

#### <How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display HEAT.
- ③ Press the TEMP. button to set the desired temperature.

**NOTE**: The set temperature changes 2°F when the ♥or △button is pressed one time. Heating 63 to 83°F.

# <Display in HEAT operation> [DEFROST]

The [DEFROST] symbol is only displayed during the defrost operation. **[STANDBY]** 

The [STANDBY] symbol is only displayed during the hot adjust mode.

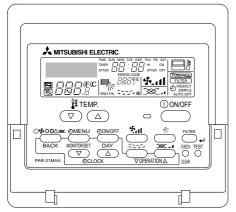

Control modes	Control details	Remarks
1. Thermostat function	1-1. Thermostat function (Function to prevent restarting for 3 minutes)  • Room temperature ≤ desired temperature -2°FThermo ON  • Room temperature ≥ desired temperatureThermo OFF	
2. Fan	By the remote controller setting (switch of 4 speeds+Auto)	
	Type Fan speed notch	
	4 speeds + Auto type [Low], [Med2], [Med1], [High], [Auto]	
	When [Auto] is set, fan speed is changed depending on the value of:	
	Desired temperature - Room temperature	
	Give priority to under-mentioned controlled mode	
	2-1. Hot adjust mode	
	<ul><li>2-2. Preheating exclusion mode</li><li>2-3. Thermo OFF mode (When the compressor off by the thermostat)</li></ul>	
	2-4. Cool air prevention mode (Defrosting mode)	
	2-1. Hot adjust mode  The fan controller becomes the hot adjuster mode for the following conditions.  ① When starting the HEAT operation ② When the thermostat function changes from OFF to ON. ③ When release the HEAT defrosting operation  Hot adjust mode *1  Set fan speed by the remote controller  [Low]	*1 "STAND BY" will be displayed during the hot
	A: Hot adjust mode starts.  B: 5 minutes have passed since the condition A or the indoor liquid pipe temperature turned 95°F or more.  C: 2 minutes have passed since the condition A. (Terminating the hot adjust mode)	adjust mode.
	2-2. Preheating exclusion mode  When the condition changes the auxiliary heater ON to OFF (thermostat or operation stop, etc), the indoor fan operates in [Low] mode for 1 minute.	· This control is same for the model without auxiliary heater.

To be continued on the next page.

## From the preceding page

Control modes	Control details	Remarks
2. Fan	2-3. Thermo OFF mode  When the thermostat function changes to OFF, the indoor fan operates in [Extra low].	
	2-4. Heat defrosting mode The indoor fan stops.	
3. Drain pump	<ul> <li>3-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met: ① ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN).</li> <li>② ON for 6 minutes after the float switch is submerged in the water when the float swich control judges the sensor is in the water.</li> </ul>	
	3-2. Float switch control  • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF.  In the water: Detected that the float switch is ON for 15 seconds.  In the air : Detected that the float switch is OFF for 15 seconds.	Same control as COOL operation
4. Vane control (Up/down vane change)	<ul> <li>(1) Initial setting: OFF → HEAT···[last setting] When the last setting is [Swing] ··· [Downward D] When changing the mode from exception of HEAT to HEAT operation ··· [Downward D]</li> <li>(2) Vane position: Horizontal →Downward A →Downward B →Downward C→Downward D→Swing→Auto  1</li> <li>(3) Restriction of vane position The vane is horizontally fixed for the following modes. (The control by the remote controller is temporally invalidated and control by the unit.)  •Thermo OFF •Hot adjust [Extra low] mode •Heat defrost mode</li> </ul>	

## 9-5. AUTO OPERATION [AUTOMATIC COOL/HEAT CHANGE OVER OPERATION]

#### <How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display AUTO.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ♥or △button is pressed one time. Automatic 67 to 83°F

Control modes	Control details	Remarks
Initial value of operation mode	HEAT mode for room temperature < Desired temperature COOL mode for room temperature ≧ Desired temperature	
2. Mode change	<ul> <li>(1) HEAT mode → COOL mode         Room temperature ≧ Desired temperature + 3°F. or 3 min. has passed</li> <li>(2) COOL mode → HEAT mode         Room temperature ≦ Desired temperature - 3°F. or 3 min. has passed</li> </ul>	
3. COOL mode	Same control as cool operation	
4. HEAT mode	Same control as heat operation	

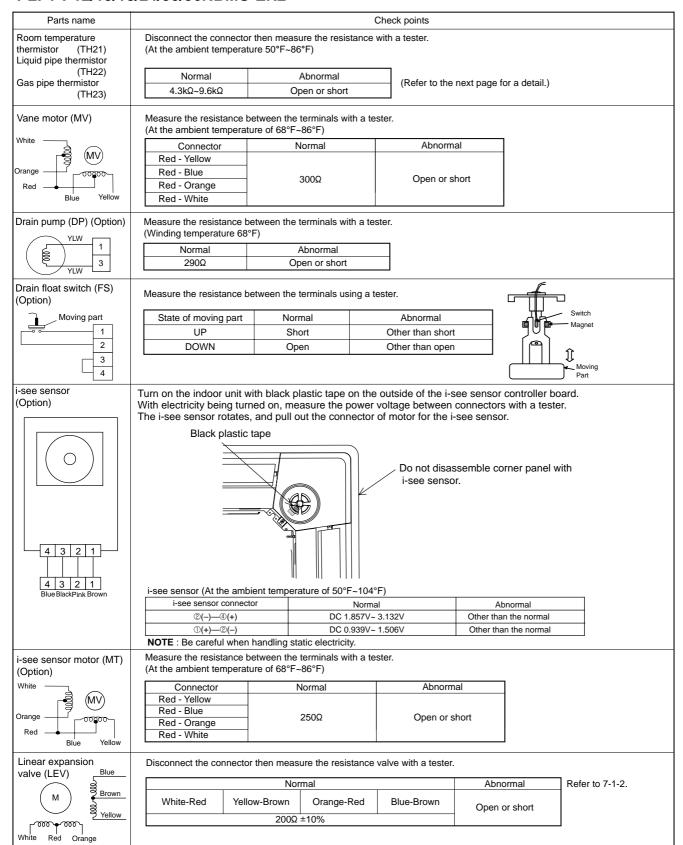

#### 9-6. WHEN UNIT IS STOPPED CONTROL MODE

Control modes	Control details	Remarks
1. Drain pump	1-1. Drain pump control The drain pump turns ON for the specified amount of time when any of the following conditions is met:  ① ON for 3 minutes after the operation mode is switched from COOL or DRY to another operation mode (FAN).  ② ON for 6 minutes after the float switch is submerged in the water when the float swich control judges the sensor is in the water.	
	1-2. Float switch control  • Float switch control judges whether the sensor is in the air or in the water by turning the float switch ON/OFF.  In the water: Detected that the float switch is ON for 15 seconds.  In the air : Detected that the float switch is OFF for 15 seconds.	· Same control as COOL operation

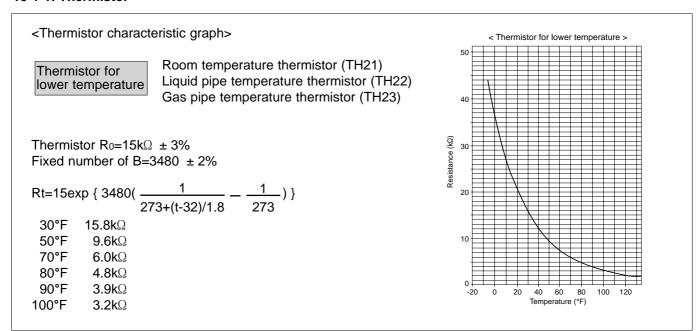

## **TROUBLESHOOTING**

# 10-1. HOW TO CHECK THE PARTS PLFY-P12/15/18/24/30/36NBMU-E PLFY-P12/15/18/24/30/36NBMU-ER2

#### PLFY-P12/15/18/24/30/36NBMU-ER1

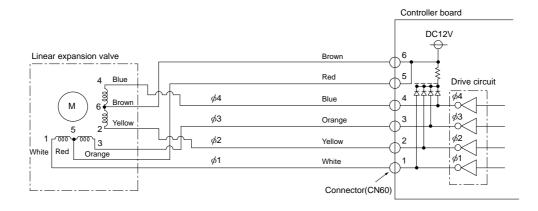

#### 10-1-1. Thermistor

#### 10-1-2. Linear expansion valve

- ① Operation summary of the linear expansion valve
- Linear expansion valve open/close through stepping motor after receiving the pulse signal from the indoor controller board.
- Valve position can be changed in proportion to the number of pulse signals.
- <Connection between the indoor controller board and the linear expansion valve>

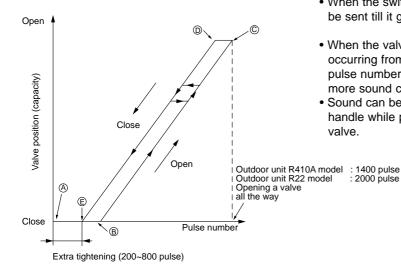

Note: Since the number of the connector at the controller board side and the relay connector are different, follow the color of the lead wire.

#### <Output pulse signal and the valve operation>

Output	Output					
(Phase)	1	2	3	4		
φ1	ON	OFF	OFF	ON		
φ2	ON	ON	OFF	OFF		
ø3	OFF	ON	ON	OFF		
φ4	OFF	OFF	ON	ON		

#### 2 Linear expansion valve operation

Closing a valve :  $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1$ Opening a valve :  $4 \rightarrow 3 \rightarrow 2 \rightarrow 1 \rightarrow 4$ The output pulse shifts in above order.

#### Note:

- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.
- When the switch is turned on, 2200 pulse closing valve signal will be sent till it goes to point ® in order to define the valve position.
- When the valve moves smoothly, there is no sound or vibration occurring from the linear expansion valves, however, when the pulse number moves from © to ③ or when the valve is locked, more sound can be heard than in a normal situation.
- Sound can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve

#### ③ Troubleshooting

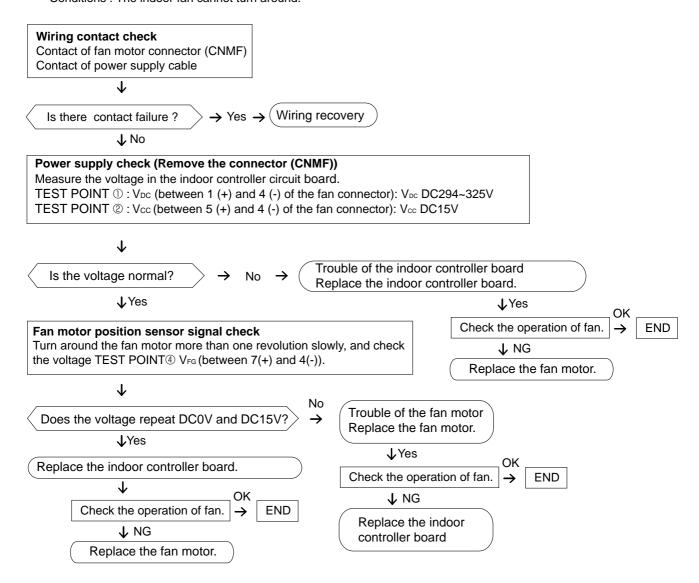

Symptom	Check points	Countermeasures
Operation circuit failure of the micro processor	Disconnect the connector on the controller board, then connect LED for checking.	Exchange the indoor controller board at drive circuit failure.
Linear expansion valve mechanism is locked.	Motor will idle and make a ticking noise when the motor is operated while the linear expansion valve is locked. This ticking sound is the sign of the abnormality.	Exchange the linear expansion vale.
Short or breakage of the motor coil of the linear expansion valve	Measure the resistance between each coil (white-red, yellow-brown, orange-red, blue-brown) with a tester. It is normal if the resistance is in the range of 150 $\Omega$ ±10%.	Exchange the linear expansion valve.
Valve does not close completely.	To check the linear expansion valve, operate the indoor unit in fan mode and at the same time operate other indoor units in cooling mode, then check the pipe temperature < liquid pipe temperature > of the indoor unit by the outdoor multi controller board operation monitor. During fan operation, linear expansion valve is closed completely and if there is any leaking, detecting temperature of the thermistor will go lower. If the detected temperature indicated in the remote controller, it means the valve is not closed all the way. It is not necessary to exchange the linear expansion valve, if the leakage is small and not affecting normal operation.	If large amount of refrigerant is leaked, exchange the linear expansion valve.
Wrong connection of the connector or contact failure	Check the color of lead wire and missing terminal of the connector.	Disconnect the connector at the controller board, then check the continuity.

#### 10-1-3. DC Fan motor (fan motor/indoor controller board)

Check method of indoor fan motor (fan motor/indoor controller board)

- ① Notes
  - · High voltage is applied to the connecter (CNMF) for the fan motor. Pay attention to the service.
  - Do not pull out the connector (CNMF) for the motor with the power supply on.
  - (It causes trouble of the indoor controller board and fan motor)
- ② Self check

Conditions: The indoor fan cannot turn around.

## 10-2. FUNCTION OF DIP SWITCH

The black square (■) indicates a switch position.

Switch	Pole	Operation by switch	Effective timing	Remarks
J41, J42 Wireless remote controller Pair No.	Jumper	To operate each indoor unit by each remote controller when installed 2 indoor units or more are near, Pair No. setting is necessary.  Pair No. setting is available with the 4 patterns (Setting patters A to D).  Make setting for J41, J42 of indoor controller board and the Pair No. of wireless remote controller.  You may not set it when operating it by one remote controller.  Setting for indoor unit Jumper wire J41, J42 on the indoor controller board are cut according to the table below.  Wireless remote controller Pair No.:  Setting operation  Peress the SET button (using a pointed implement). Check that the remote controller's display has stopped before continuing.  MODEL SELECT blinks, and the model No. (3 digits) appears (steadily-lit).  Press the MINUTE button twice. The pair number appears flashing.  Press the set button (using a pointed implement). The set Pair No. is displayed (steadily-lit) for 3 seconds, then disappears.  Indoor controller Jumper wire  Pair No. of wireless remote controller **  B Cut — 1 1 — 0 Initial setting  B Cut — 1 1 — 0 Initial setting  B Cut — 1 1 — 0 Initial setting  B Cut — 1 1 — 0 Initial setting  B Cut — 1 1 — 1 — 0 D Cut	Under operation or suspension	Indoor controller board   Indoor controlle

## DISASSEMBLY PROCEDURE

## PLFY-P12/15/18/24/30/36NBMU-E PLFY-P12/15/18/24/30/36NBMU-ER2

#### PLFY-P12/15/18/24/30/36NBMU-ER1

Be careful when removing heavy parts.

#### **OPERATING PROCEDURE**

#### 1. Removing the air intake grille

- (1) Slide the knob of air intake grille toward the arrow ① to open the air intake grille.
- (2) Remove drop prevention hook from the panel.
- (3) Slide the shaft in the hinge to the direction of the arrow ② and remove the air intake grille.

# Figure 1 Air intake grille

**PHOTOS & ILLUSTRATIONS** 

#### 2. Removing the room temperature thermistor (TH21)

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Remove the 2 screws from the electrical box cover.
- (3) Disconnect the connector CN20 (Red) from the indoor controller board.
- (4) Remove the room temperature thermistor.

#### 3. Removing the address board (A.B)

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Remove the 2 screws from the address board cover.
- (3) Disconnect the connectors CN43 (RED/4P) and CN82 (RED/8P).
- (4) Slide and remove the address board.

#### 4. Removing the indoor controller board (I.B)

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Remove the 2 screws from the electrical box cover.
- (3) Disconnect the connectors:

CNMF (White/7P) for fan motor

CN44 (White/4P) for thermistor (TH22/TH23)

CNP (Blue/3P) for drain pump CN4F (White/4P) for float switch CND (Black/5P) for earth and TB2 CNV (White/20P) for vane motor CN81, CN42 (Red/8P, 4P) for address board

CN2M (Blue/2P) for TB5 CN3A (Blue/3P) for TB15

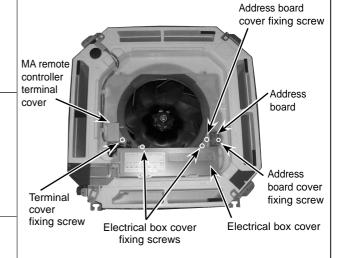

- (4) Remove the 6 supports from indoor controller board.
- (5) Remove the indoor controller board.

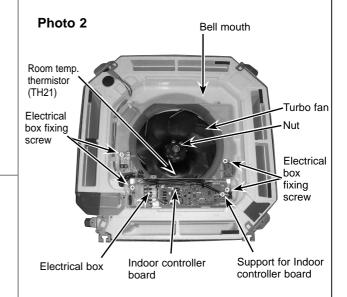

#### 5. Removing the electrical box

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Remove the 2 screws from the electrical box cover.
- (3) Disconnect the connectors. (Refer to procedure 4)
- (4) Remove 4 electrical box fixing screws and remove 2 hooks.
- (5) Pull the electrical box.
  - <Electrical parts in the electrical box> Indoor controller board Terminal block (TB2) (TB5)

#### Photo 1

Air intake grille knob

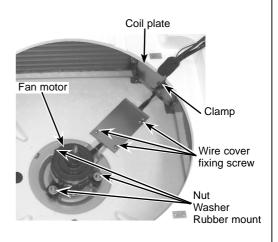

#### **OPERATING PROCEDURE**

#### 6. Removing the fan and fan motor (MF)

- (1) Remove the electrical box. (See Photo 2)
- (2) Remove the bell mouth (3 screws). (See Photo 2)
- (3) Remove the turbo fan nut.
- (4) Pull out the turbo fan.
- (5) Remove the wire cover (3 screws).
- (6) Remove 2 wiring clamps.
- (7) Disconnect the connector of the fan motor (CNMF).
- (8) Remove the 3 nuts and washers and rubber mounts of the fan motor.

#### **PHOTOS & ILLUSTRATIONS**

#### Photo 3

#### 7. Removing the panel

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Disconnect the connector CNV (White/20P).

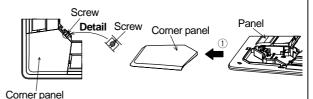

#### Corner panel (See Figure 2)

- (3) Remove the corner screw.
- (4) Slide the corner panel to the direction of the arrow ①, and remove the corner panel.

#### Panel (See Photo 4, 5)

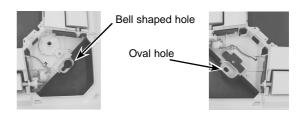

- (5) Remove the 2 screws from the panel which fixes to the oval holes.
- (6) Rotate the panel a little to come to the bell shaped hole where the screw is large and remove the panel.

#### Figure 2

#### Photo 4

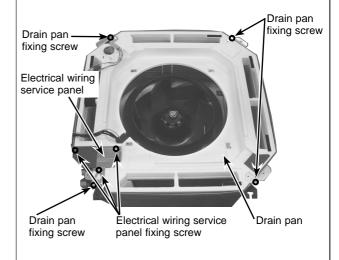

Photo 5

#### 8. Removing the drain pan

- (1) Remove the air intake grille and the filter. (See Figure 1)
- (2) Remove the 2 screws from the electrical box cover.
- (3) Disconnect the connectors. (Refer to procedure 4)
- (4) Remove the panel. (See Photo 4, 5)
- (5) Remove the electrical wiring service panel (3 screws).
- (6) Remove the electrical box. (See Photo 2)
- (7) Remove the bell mouth. (See Photo 2)
- (8) Remove the 4 screws and pull out the drain pan.
- \* Pull out the left and right of the pan gradually.
- Be careful not to crack or damage the pan.

#### Photo 6

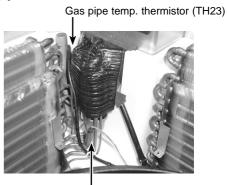

#### **OPERATING PROCEDURE**

# 9. Removing the liquid pipe temperature thermistor (TH22) and gas pipe temperature thermistor (TH23)

- (1) Remove the drain pan. (See Photo 6)
- (2) Remove the turbo fan. (Refer to procedure 6)
- (3) Remove the 2 wiring clamps. (See Photo 3)
- (4) Remove the coil plate (2 screws).
- (5) Remove the thermistors which are inserted into the holders installed to the thin copper pipe.
- (6) Disconnect the 4-pin white connector (CN44).

#### **PHOTOS & ILLUSTRATIONS**

#### Photo 7

Liquid pipe temp. thermistor (TH22)

#### 10 Removing the drain pump (DP) and float switch (FS)

- (1) Remove the drain pan. (See Photo 6)
- (2) Cut the hose band and remove the hose.
- (3) Remove the drain pump assembly (3 screws and 2 hooks).
- (4) Remove the drain pump (3 screws).
- (5) Remove the float switch (2 screws).

#### Photo 8

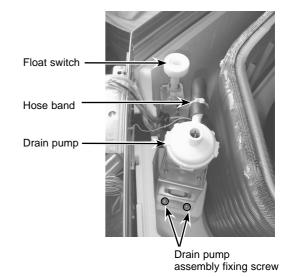

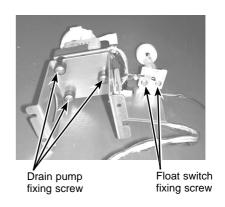

Photo 9

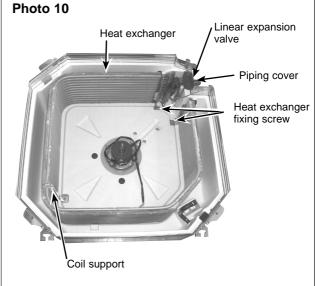

#### **OPERATING PROCEDURE**

#### 11. Removing the heat exchanger

- (1) Remove the drain pan. (See Photo 6)
- (2) Remove the 3 screws of the piping cover, and pull out piping cover.
- (3) Remove the 2 screws of coil plate.
- (4) Remove the 2 screws of the coil.
- (5) Remove the screw of the coil support.
- (6) Pull out the heat exchanger.
