ABOUT MICROBATTERY

MicroBattery is a Danish brand established in 2003 as a part of the MicroUpgrade family of products. With sales and logistics departments located in Copenhagen, and more than 40 distributors in 25 countries throughout Europe, MicroBattery supplies more than 40.000 resellers every year.

Our main objective is manufacturing and bringing high quality batteries and adapters to the EMEA market at the best prices possible and continuously ensuring customer satisfaction.

Try our **PRODUCT GUIDE** next time you are looking for batteries or adapters. In 3 easy steps you will experience a high degree of accuracy and quick response, providing you with the exact battery or adapter you need - based on more than 1 million references in the guide. You can even have the Product Guide installed on your own website.

We will enjoy helping you! Please contact your local sales team for further discussions.

Our product range is updated weekly, for complete assortment please visit

- Your new battery comes in a discharged condition and must be charged before use
- Upon initial use (or after prolonged storage period) the battery may require two to three charge/discharge cycles before achieving maximum capacity
- If the battery is not going to be used for more than a month, it is recommended that it is removed from the device and stored in a cool, dry, clean place
- It is normal for a battery to become warm during charging and discharging
- A charged battery will eventually lose its charge if unused, it may therefore be necessary to recharge the battery after a storage period

BATTERY TYPES

...explained

Nickel Metal Hydride (NiMH)

Description: Small dry-cell batteries, sealed, rechargeable

Formats: AAA, AA, C, D, 9 volt, 12 volt, poly-wrapped cell packs, small-cylinder, custom sizes.

Common Uses: Cell phones, laptop computers, PDAs, power tools, hybrid automobiles (see Hybrid Automobile section also), cameras, handheld electronics and R/C hobby vehicles.

Safety: Non-spillable, non-toxic.

NiMH stands for Nickel-Metal Hydride, the materials used in some battery packs. Unlike NiCad batteries, NiMH batteries do not use heavy metals that may have toxic effects. In addition, they can store up to 50% more power than NiCad batteries and do not suffer from memory effects.

Lithium-ion (Li-ion)

Description: Small dry cell batteries, sealed, rechargeable.

Formats: Custom sizes in hard plastic case, small-cylinder, button cells.

Common Uses: Cell phones, laptop computers, power tools, hybrid automobiles (see Hybrid Automobile section also), video cameras, handheld electronics.

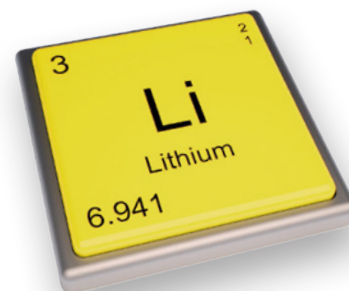

Safety: Non-spillable, non-toxic.

Lithium battery recycling: High temperature metal reclamation (HTMR) is used to recycle the metals (nickel, iron, cobalt, etc.) and plastics of lithium batteries for reuse in new products.

Lithium Ion Batteries have high energy-densities and cost less than lithium-polymer batteries. In addition, they do not require priming when first used and have a low self-discharge.

Lithium-polymer (Li-Polymer)

This type of battery can have credit card thin designs while still holding relatively good battery life. In addition, lithium-polymer batteries are very light-weight and have improved safety. However, these batteries will cost more to manufacture and have a worse energy density than lithium-ion batteries.
